This document is not an ASTM standard and is intended only to provide the user of an ASTM standard an indication of what changes have been made to the previous version. Because it may not be technically possible to adequately depict all changes accurately, ASTM recommends that users consult prior editions as appropriate. In all cases only the current version of the standard as published by ASTM is to be considered the official document.

Designation: D580/D580M - 10 D580/D580M - 15

# Standard Specification for Greige Woven Glass Tapes and Webbings<sup>1</sup>

This standard is issued under the fixed designation D580/D580M; the number immediately following the designation indicates the year of original adoption or, in the case of revision, the year of last revision. A number in parentheses indicates the year of last reapproval. A superscript epsilon ( $\varepsilon$ ) indicates an editorial change since the last revision or reapproval.

## 1. Scope

1.1 This specification primarily covers greige tapes and webbings woven from "E" electrical classification glass fiber yarns. This specification can also be applied to tapes and webbings made of other glass fiber grades upon agreement between the purchaser and the supplier.

1.2 This specification is intended to assist ultimate users by designating the types of these products that are typical in the industry. This specification permits the application of organic materials to the glass fiber yarn during manufacture that helps facilitate weaving. When used as permitted in this specification, such materials will not interfere with the intended end use requirements.

1.3 The values stated in either SI units or inch-pound units are to be regarded separately as standard. The values stated in each system may not be exact equivalents; therefore, each system shall be used independently of the other. Combining values from the two systems may result in nonconformance with the standard.

1.4 This standard does not purport to address all of the safety concerns, if any, associated with its use. It is the responsibility of the user of this standard to establish appropriate safety and health practices and determine the applicability of regulatory limitations prior to use.

# 3. Terminology

3.1 Definitions of Terms Specific to This Standard:

3.1.1 For definitions of glass fiber and product terms used in this specification refer to Terminology D7018.

<sup>&</sup>lt;sup>1</sup> This specification is under the jurisdiction of ASTM Committee D13 on Textiles and is the direct responsibility of Subcommittee D13.18 on Glass Fiber and its Products. Current edition approved June 1, 2010Feb. 1, 2015. Published July 2010March 2015. Originally approved in 1940. Last previous edition approved in 2004 as D580-04.D580/D580M - 10. DOI: 10.1520/D0580\_D0580M-10.10.1520/D0580\_D0580M-15

<sup>&</sup>lt;sup>2</sup> For referenced ASTM standards, visit the ASTM website, www.astm.org, or contact ASTM Customer Service at service@astm.org. For Annual Book of ASTM Standards volume information, refer to the standard's Document Summary page on the ASTM website.

<sup>&</sup>lt;sup>3</sup> The last approved version of this historical standard is referenced on www.astm.org.

<sup>&</sup>lt;sup>4</sup> Available from American National Standards Institute, 11 W. 42nd St., 13th Floor, New York, NY 10036.

3.1.2 The following terms are relevant to this standard: continuous filament yarn, greige goods, tape, webbing.

3.1.3 For definitions of other textile terminology used in this specification, refer to Terminology D123.

# 4. Classification

4.1 Greige glass fiber tapes and webbings are produced in two types and are constructed with yarns designated as directed in Specification D578. The standard types are:

4.1.1 *Type A*—Medium texture.

4.1.2 *Type B*—Open texture.

4.2 The designation of a tape or webbing shall be by style numbers that are standard throughout the industry.

4.3 Two segments of characters are used to describe tapes and webbings.

4.3.1 The first segment of the description of tape or webbing describes the glass classification, the type fiber in the warp, and the type fiber in the filling.

4.3.1.1 The first letter in the first segment is one of the following glass classification codes: "E" for electrical, "C" for chemical, "S" for high strength.force.

4.3.1.2 The second letter in the first segment specifies the fiber type in the warp direction: "C" describes continuous filament fiber using either SI units or inch-pound units, staple (discontinuous) fiber is described by "D" in SI units or "S" in inch-pound units.

4.3.1.3 The third letter in the first segment specifies the fiber type in the filling direction: "C" describes continuous filament fiber using either SI units or inch-pound units, staple (discontinuous) fiber is described by "D" in SI units or "S" in inch-pound units.

4.3.2 The second segment of the description of tape or webbing describes the texture: "A" describes medium texture and "B" describes close texture.

ECD - B

(1)

(2)

4.4 Examples of glass fiber tapes or webbings.

4.4.1 Example 1a (SI units):

where:

E = electrical glass,

C =continuous filament yarn warp direction,

D = discontinuous (staple) yarn filling direction, and

B = close textured.

4.4.2 Example 1b [inch-pound units]:

# ASTM DECS = B580M - 15

where: /standards.iteh.ai/catalog/standards/sist/7206d2a6-dd53-472c-8515-757d89dc1941/astm-d580-d580m-15

- E = electrical glass,
- C = continuous filament yarn warp direction,
- S = staple (discontinuous) filament yarn filling direction, and
- B = close textured.

# REQUIREMENTS

## 5. Material

5.1 The fiber shall be continuous filament or staple (discontinuous) fiber, as agreed upon between the purchaser and supplier, free of any free alkali metal salts, such as soda or potash, and foreign particles, dirt, and other impurities.

## 6. Fabric Count

6.1 For tapes listed in Tables 1 and 2, and webbings listed in Table 3, the nominal fabric count shall conform to the requirements of Table 1, Table 2, and Table 3, respectively. For tapes or webbings not listed in Table 1, Table 2, and Table 3, the nominal fabric count shall be agreed upon between the purchaser and the supplier. The average count of warp ends shall be within one end of the nominal count and the average count of the filling picks shall be within two picks of the nominal count.

## 7. Yarn Designations

7.1 For tapes and webbings, the yarn designations shall be as agreed upon between the purchaser and supplier. The requirements of the individual elements of the designation are specified in Sections 8 - 12.

## 8. Yarn Number

8.1 For tapes and webbings, the nominal size-free yarn numbers of the yarns designated shall conform to Specification D578.

#### 9. Filament Diameter

9.1 The nominal values for the filament diameters when agreed upon between purchaser and supplier are listed in Table 1 of Specification D578. The average filament diameter for the yarns in the tape or webbing shall conform to Specification D578 for the specified filament diameter.

#### **10. Strand Construction**

10.1 The basis for specifying strand construction is given in Specification D578. The construction of the component strands shall be agreed upon between the purchaser and the supplier.

# 11. Direction of Twist

11.1 Unless otherwise agreed upon between the purchaser and the supplier, the primary twist in the singles strands shall be "Z" twist and the final twist in the plied yarns shall be "S" twist.

# 12. Twist Level

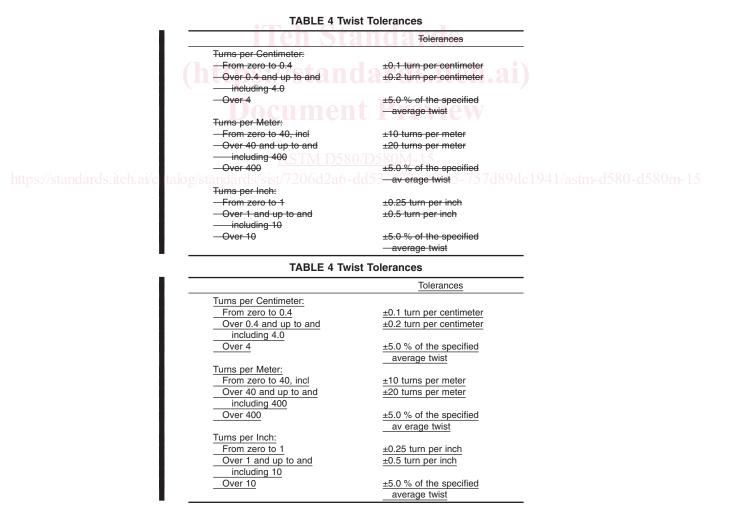

12.1 The nominal twist in the component strands and the finished yarns shall be agreed upon between the purchaser and supplier. The tolerances for the primary twist and the final twist shall conform to Table 4.

# 13. Tape Weave Type

13.1 For tapes listed in Tables 1 and 2 and webbings listed in Table 3, the weave type shall be plain weave. For tapes and webbings not listed in Table 1, Table 2, and Table 3, the weave type shall be agreed upon between the purchaser and the supplier.

#### 14. Length per Unit Mass

14.1 For tapes listed in Tables 1 and 2, and webbings listed in Table 3, the nominal length per unit mass shall conform to the requirements of Table 1, Table 2, and Table 3, respectively. For tapes and webbings not listed in Table 1, Table 2, and Table 3, the nominal length per unit mass shall be agreed upon between the purchaser and the supplier. The average length per unit mass for the lot shall be within the interval: specified length per unit mass  $\pm 10$  %.

#### 15. Thickness

15.1 For tapes listed in Tables 1 and 2, and webbings listed in Table 3, the nominal thickness shall conform to the requirements of Table 1, Table 2, and Table 3, respectively. For tapes and webbings not listed in Table 1, Table 2, and Table 3, the nominal thickness shall be agreed upon between the purchaser and the supplier. The average thickness of the tape or webbing in the lot shall conform to the requirements of Table 5, unless specified otherwise.

#### 16. Breaking StrengthForce

16.1 For tapes listed in Tables 1 and 2, and webbings listed in Table 3, the average breaking strengthforce shall conform to the requirements of Table 1, Table 2, and Table 3, respectively. For tapes and webbings not listed in Table 1, Table 2, and Table 3, the average breaking strengthforce shall be agreed upon between the purchaser and the supplier. The average breaking strengthforce for the lot shall exceed the specified breaking strengthforce and no individual break shall be less than 80 % of the specified average breaking strength.force.

#### 17. Width

17.1 For tapes listed in Tables 1 and 2, and webbings listed in Table 3, the nominal width shall conform to the requirements of Table 1, Table 2, and Table 3, respectively. For tapes and webbings not listed in Table 1, Table 2, and Table 3, the nominal width shall be agreed upon between the purchaser and the supplier. The tolerances for width shall conform to Table 6 unless otherwise agreed upon between the purchaser and the supplier.

## **18. Length Per Package**

18.1 The nominal length of tape or webbing on each package, such as a spool or serving tube, shall be no more than 36 m [40 yd] nor no less than 32 m [36 yd] except for 0.075 mm [0.003 in.] thick tape or webbing which shall be no more than 68 m [76 yd] nor no less than 65 m [72 yd], unless otherwise agreed upon between the purchaser and the supplier.

18.2 Unless otherwise agreed upon between the purchaser and the supplier, no piece of tape or webbing shall be less than 14 m [15 yd] long and there shall be no more than two pieces in a package.

18.3 None of the sample tubes or serving spools shall contain more than the allowable pieces, and the combined length of all of the sample tubes or serving spools shall not be less than the combined length of those tubes or serving spools on the identification labels.

#### 19. Ignition Loss

19.1 The organic content of greige tape or webbing shall be less than 4.0 % unless otherwise agreed upon between the purchaser and the supplier.

#### 20. Visual Appearance

20.1 The woven greige tape or webbing shall be generally uniform in quality and condition, clean, smooth, and free of foreign particles and from defects detrimental to fabrication, appearance, or performance.

20.2 The tape or webbing in the laboratory sample for the visual appearance shall be examined on both sides for the defects listed in Table 7 and the acceptable quality levels (AQLs) shall be 0.65 major and 2.5 total (major and minor combined) defects per hundred units of tape or webbing unless otherwise agreed upon between the purchaser and the supplier.

#### 21. Put-Up

21.1 The tape or webbing shall be furnished in rolls and shall be wound on suitable tubes or serving spools with cores of the same width as the tape or webbing, measuring 9.5 mm [ $\frac{3}{8}$  in.] inside diameter, unless otherwise specified. The ends of the rolls shall be securely fastened with gummed tape to prevent slippage and unrolling of the tape or webbing. The maximum number of pieces contained in any roll shall be as specified in 18.2. The supplier may use his standard practice when agreed upon between the purchaser and the supplier.
