# Standard Specification for Electric-Resistance-Welded Carbon and Alloy Steel Mechanical Tubing ${ }^{1}$ 

#### Abstract

This standard is issued under the fixed designation A513/A513M; the number immediately following the designation indicates the year of original adoption or, in the case of revision, the year of last revision. A number in parentheses indicates the year of last reapproval. A superscript epsilon $(\varepsilon)$ indicates an editorial change since the last revision or reapproval.

This standard has been approved for use by agencies of the U.S. Department of Defense.

## 1. Scope*

1.1 This specification covers electric-resistance-welded carbon and alloy steel tubing for use as mechanical tubing.
1.2 This specification covers mechanical tubing made from hot- or cold-rolled steel.
1.3 This specification covers round, square, rectangular, and special shape tubing.

1.4 Optional supplementary requirements are provided and when desired, shall be so stated in the order.
1.5 The values stated in either SI units or inch-pound units are to be regarded separately as standard. Within the text the SI units are shown in brackets or parentheses. brackets. The values stated in each system may not be exact equivalents; therefore each system shall be used independently of the other. Combining values from the two systems may result in non-conformance with the standard. The inch-pound units shall apply unless the " M " designation of this specification is specified in the order. In this specification hard or rationalized conversions apply to diameters, lengths and tensile properties. Soft conversion applies to other SI measurements.

## 3. Ordering Information

3.1 Orders for material under this specification should include the following as required to adequately describe the desired material:
3.1.1 Quantity (feet, metres, or number of lengths),
3.1.2 Name of material (electric resistance-welded carbon or alloy steel mechanical tubing),
3.1.3 Types, conditions and code letters, (See Sections 1 and 12),
3.1.4 Thermal condition, (See 12.2),
3.1.5 Flash condition, (See 12.3),
3.1.6 Grade designation, if required, (See Section 5),
3.1.7 Report chemical analysis and product analysis, if required (See Sections 6 and 7),
3.1.8 Individual supplementary requirements, if required (S1 to S10, inclusive),
3.1.9 Cross section (round, square, rectangular and special shapes),
3.1.10 Dimensions, round, outside and inside and wall thickness (See 8.1 and 8.2) or square and rectangular, outside dimension and wall thickness and corner radii, if required (See 9.1 and 9.2),
3.1.11 Length, round, mill lengths or definite cut length (See 8.3), square and rectangular, specified length (See 9.4),
3.1.12 Squareness of cut, round tubing, if required, (See 8.4),
3.1.13 Burrs removed, if required (See 11.2),
3.1.14 Protective coating (See 14.1),
3.1.15 Special packaging (See 17.1),
3.1.16 Specification designation,
3.1.17 End use,
3.1.18 Special requirements,
3.1.19 Special marking (See Section 16), and
3.1.20 Straightness Test Method (See 8.5 and 9.6).

## TABLE 1 Chemical Requirements for Standard Low-Carbon Steels ${ }^{A}$

Note 1 - Chemistry represents heat analysis. Product analysis, except for rimmed or capped steel, is to be in accordance with usual practice as shown in Table 3.

|  | Chemical Composition Limits, \% |  |  |  |
| :--- | :---: | :---: | :---: | :---: |
| Grade <br> Designation | Carbon | Manganese | Phosphorus, <br> max | Sulfur, <br> max |
| MT $^{B} 1010$ | $0.02-0.15$ | $0.30-0.60$ | 0.035 | 0.035 |
| MT 1015 | $0.10-0.20$ | $0.30-0.60$ | 0.035 | 0.035 |
| MT X 1015 | $0.10-0.20$ | $0.60-0.90$ | 0.035 | 0.035 |
| MT 1020 | $0.15-0.25$ | $0.30-0.60$ | 0.035 | 0.035 |
| MT X 1020 | $0.15-0.25$ | $0.70-1.00$ | 0.035 | 0.035 |

[^2]
## 4. Materials and Manufacture

4.1 The steel may be made by any process.
4.2 If a specific type of melting is required by the purchaser, it shall be as stated on the purchase order.
4.3 The primary melting may incorporate separate degassing or refining, and may be followed by secondary melting, such as electroslag or vacuum-arc remelting. If secondary melting is employed, the heat shall be defined as all of the ingots remelted from a single primary heat.
4.4 Steel may be cast in ingots or may be strand cast. When steel of different grades is sequentially strand cast, identification of the resultant transition material is required. The producer shall remove the transition material by an established procedure that positively separates the grades.
4.5 Tubes shall be made by the electric-resistance-welded process and shall be made from hot- or cold-rolled steel as specified.
4.5.1 The weld shall not be located within the radius of the corners of any shaped tube unless specified by the purchaser.

## 5. Chemical Composition

5.1 The steel shall conform to the requirements as to chemical composition prescribed in Table 1 or Table 2 (See Specification A1040). If no grade is specified, Grades MT 1010 to MT 1020 may be furnished. Analyses of steels other than those listed are available. To determine their availability, the purchaser should contact the producer.
5.2 When a carbon steel grade is ordered under this specification, supplying an alloy grade that specifically requires the addition of any element other than those listed for the ordered grade in Tables 1 and 2 is not permitted.
5.3 Mechanical tubing with improved ductility may be produced from Drawing Steel (Types A and B), Deep Drawing Steel, or Extra Deep Drawing Steels identified in Specifications A1008/A1008M, A1011/A1011M, or A1039/A1039M. Those Specifications offer guidance in the form of nonmandatory Typical Ranges of Mechanical Properties.

TABLE 2 Chemical Requirements for Other Carbon and Alloy Steels ${ }^{A}$
Nоте 1-Chemistry represents heat analysis. Product analysis, except for rimmed or capped steel, is to be in accordance with usual practice as shown in Table 3.

| Grade Designation | Chemical Composition Limits, \% |  |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |

[^3]
## 6. Heat Analysis

6.1 An analysis of each heat of steel shall be made by the steel manufacturer to determine the percentages of the elements specified; if secondary melting processes are employed, the heat analysis shall be obtained from one remelted ingot or the product of one remelted ingot of each primary melt. The heat analysis shall conform to the requirements specified, except that where the heat identity has not been maintained or where the analysis is not sufficiently complete to permit conformance to be determined, the chemical composition determined from a product analysis made by the tubular manufacturer shall conform to the requirements specified for heat analysis. When requested in the order or contract, a report of such analysis shall be furnished to the purchaser.

## 7. Product Analysis

7.1 When requested on the purchase order, a product analysis shall be made by the supplier. The number and source of samples for such product analysis shall be based on the individual heat or lot identity of one of the following forms of material:
7.1.1 Heat Identity Maintained-One product analysis per heat shall be made on either the flat-rolled stock or tube.
7.1.2 Heat Identity Not Maintained-A product from one tube per 2000 ft [ 600 m ] or less for sizes over 3 in . [ 75 mm ], and one tube per 5000 ft [ 1500 m ] or less for sizes $3 \mathrm{in} .[75 \mathrm{~mm}$ ] and under.
7.2 Samples for product analysis except for spectrochemical analysis shall be taken in accordance with Practice A751. The composition thus determined shall correspond to the requirements of Tables 1 and 2.
7.3 If the original test for product analysis fails, retests of two additional lengths of flat-rolled stock or tubes shall be made. Both retests for the elements in question shall meet the requirements of the specification; otherwise, all remaining material in the heat or lot shall be rejected or, at the option of the producer, each length of flat-rolled stock or tube may be individually tested for acceptance. Lengths of flat-rolled stock or tubes which do not meet the requirements of the specification shall be rejected.

## 8. Permissible Variations in Dimensions for Round Tubing

8.1 Diameter and Wall Thickness (Hot-Rolled Steel)—Variations from specified outside diameter for "as-welded" and "as-welded and annealed" tubing made from hot-rolled steel shall not exceed the amounts prescribed in Table 4. Permissible variations in outside diameter for tubing that has been sink-drawn for closer tolerance on outside diameter are shown in Table 5. Permissible variations in wall thickness for tubing that has been sink-drawn for closer tolerances on outside diameters are $\pm 10 \%$ of the nominal wall or $\pm 0.010 \mathrm{in} .(0.25 \mathrm{~mm}),[0.25 \mathrm{~mm}]$, whichever is greater. Permissible variations in wall thickness for tubing made from hot-rolled steel are shown in Tables 6 and 7. Permissible variation in outside and inside diameter for tubing made from hot-rolled steel that has been Drawn Over a Mandrel (DOM) for closer tolerances are shown in Table 5 with wall tolerances shown in Tables 8 and 9.
8.2 Diameter and Wall Thickness (Cold-Rolled Steel)—Variations in outside diameter and inside diameter of "as-welded" and "as-welded and annealed" tubing made from cold-rolled steel are shown in Table 10. Outside diameter tolerances for cold-rolled steel tubing, sink drawn and DOM, are shown in Table 5. Wall thickness tolerances for "as-welded" tubing made from cold-rolled steel are shown in Tables 11 and 12. Permissible variations in wall thickness for round tubing, DOM for closer tolerances, are

| Element | Limit, or Maximum of Specified Range, \% | Variation, Over the Maximum Limit or Under the Minimum Limit |  |
| :---: | :---: | :---: | :---: |
|  |  | Under min, \% | Over max, |
| Carbon | to 0.15, incl | 0.02 | 0.03 |
|  | over 0.15 to 0.40 , incl | 0.03 | 0.04 |
|  | over 0.40 to 0.55 , incl | 0.03 | 0.05 |
| Manganese | to 0.60 , incl | 0.03 | 0.03 |
|  | over 0.60 to 1.15 , incl | 0.04 | 0.04 |
|  | over 1.15 to 1.65 , incl | 0.05 | 0.05 |
| Phosphorus |  | ... | 0.01 |
| Sulfur |  | ... | 0.01 |

${ }^{\text {A }}$ Flash-In-Tubing is produced only to outside diameter tolerances and wall thickness tolerances and the inside diameter welding flash does not exceed the wall thickness or $3 / 32$ in. ( 2.4 mm ), [ 2.4 mm ], whichever is less.
${ }^{B}$ Flash Controlled to 0.010 in . $(0.25 \mathrm{~mm})[0.25 \mathrm{~mm}]$ maximum tubing consists of tubing which is commonly produced only to outside diameter tolerances and wall thickness tolerances, in which the height of the remaining welding flash is controlled not to exceed 0.010 in .
${ }^{c}$ Flash Controlled to 0.005 in . $(0.13 \mathrm{~mm})[0.13 \mathrm{~mm}]$ maximum tubing is produced to outside diameters and wall thickness tolerance, inside diameter and wall thickness tolerances, or outside diameters and inside diameter tolerances, in which the height of the remaining flash is controlled not to exceed 0.005 in. Any remaining flash is considered to be part of the applicable inside diameter tolerances.
${ }^{D}$ No Flash tubing is further processed by DOM for closer tolerances, produced to outside diameter and wall, inside diameter and wall, or outside diameter and inside diameter, with no dimensional indication of inside diameter flash, and is available in Types 5 and 6.
${ }^{E}$ Birmingham Wire Gauge.
${ }^{F}$ The ovality shall be within the above tolerances except when the wall thickness is less than $3 \%$ of the outside diameter, in such cases see 8.6.1.
shown in Tables 8 and 9. Permissible variations in wall thickness for tubing that has been sink-drawn for closer tolerances on outside diameter are $\pm 10 \%$ of the nominal wall or $\pm 0.010 \mathrm{in} .(0.25 \mathrm{~mm}),[0.25 \mathrm{~mm}]$, whichever is greater.
8.3 Length (Hot- and Cold-Rolled Steel)—Mechanical tubing is commonly furnished in mill lengths $5 \mathrm{ft}(1.5 \mathrm{~m})[1.5 \mathrm{~m}]$ and over. Definite cut lengths are furnished when specified by the purchaser. Tolerances for definite cut lengths round tubing shall be as given in Tables 13 and 14 .
8.4 Squareness of Cut (Hot- and Cold-Rolled Steel)—When specified, tolerance for squareness of cut of round tubing shall be as given in Table 15. Measurements are made with use of an "L" square and feeler gauge. The long leg (blade) of the square to be equal to tube diameter plus a minimum of $1 \mathrm{in} .(25.4 \mathrm{~mm}) .[25.4 \mathrm{~mm}]$. Outside diameter burr to be removed for measurement.

TABLE 5 Diameter Tolerances for Types 3, 4, 5, and 6 (S.D.H.R., S.D.C.R., DOM, and S.S.I.D) Round Tubing
Note 1-Measurements for diameter are to be taken at least 2 in . $[50 \mathrm{~mm}]$ from the ends of the tubes.

${ }^{A}$ Tubing, flash in or flash controlled which is further processed without mandrel to obtain tolerances closer than those shown in Tables 4 and 10.
${ }^{B}$ The ovality shall be within the above tolerances except when the wall thickness is less than $3 \%$ of the outside diameter, in such cases see 8.6.2.
${ }^{c}$ Tubing produced to outside diameter and wall thickness, or inside diameter and wall thickness, or outside diameter and inside diameter, by DOM to obtain tolerances closer than those shown in Tables 4 and 10 and no dimensional indication of inside diameter flash.
8.5 Straightness-The straightness tolerance for round tubing is $0.030 \mathrm{in} . / 3 \mathrm{ft}[0.75 \mathrm{~mm} / 1 \mathrm{~m}$ ] lengths to 8.000 in . [200 mm] outside diameter. For 8.000 in . [ 200 mm ] outside diameter and above, straightness tolerance is $0.060 \mathrm{in} . / 3 \mathrm{ft}[1.5 \mathrm{~mm} / 1 \mathrm{~m}$ ] lengths. For lengths under 1 ft [ 305 mm ] the straightness tolerance shall be agreed upon between the purchaser and producer. The test method for straightness measurement is at the manufacturer's option, unless a specific test method is specified in the purchase order.
8.6 Ovality (Hot- and Cold-Rolled Steel)—Ovality is the difference between maximum and minimum outside diameters measured at any one cross section. The ovality shall be within the tolerances except when the wall thickness is less than $3 \%$ of the outside diameter.
8.6.1 In such cases for Types 1 and 2 (A.W.H.R. and A.W.C.R.) the ovality may be $50 \%$ greater than the outside tolerances but the mean outside diameter shall be within the specified tolerance.
8.6.2 For Types 3, 4, 5, and 6 (S.D.H.R., S.D.C.R., DOM, and S.S.I.D.) the additional ovality shall be as follows but the mean outside diameter shall be within the specified tolerance:

| - | Additional Ovality |
| :---: | :---: |

| Over 12 to 12.500 [ 305 to 320], incl | 0.065 [1.65] |

## 9. Permissible Variations in Dimensions of Square and Rectangular Tubing

9.1 Diameter and Wall Thickness-Permissible variations in outside dimensions for square and rectangular tubing shall be as given in Table 16. The wall thickness tolerance is $\pm 10 \%$ of the nominal wall thickness.
9.2 Corner Radii-Unless otherwise specified, the corners of square and rectangular tubing shall be slightly rounded inside and outside, consistent with wall thickness. The outside corners may be slightly flattened. The radii of corners shall be as given in Table 17.
9.3 Squareness-Permissible variations for squareness shall be determined by the following equation:

TABLE 6 Wall Thickness Tolerance for Type I (A.W.H.R.) Round Tubing (Inch Units)

    ${ }^{4}$ Available from Standardization Documents Order Desk, Bldg. 4 Section D, 700 Robbins Ave., Philadelphia, PA 19111-5094, Attn: NPODS.

[^2]:    ${ }^{\text {A }}$ Rimmed or capped steels which may be used for the above grades are characterized by a lack of uniformity in their chemical composition, and for this reason product analysis is not technologically appropriate unless misapplication is clearly indicated.
    ${ }^{B}$ The letters MT under grade designation indicate Mechanical Tubing.

[^3]:    ${ }^{\text {A }}$ Where the ellipsis (...) appears in this table, there is no requirement.

[^4]:    ${ }^{\text {A }}$ Individual determinations may vary from the specified heat limits or ranges to the extent shown in this table, except that any element in a heat may not vary both above and below a specified range.
    ${ }^{B}$ Where the ellipsis (...) appears in this table, there is no requirement.
