## Intellectual Property Rights

IPRs essential or potentially essential to the present document may have been declared to ETSI. The information pertaining to these essential IPRs, if any, is publicly available for **ETSI members and non-members**, and can be found in ETSI SR 000 314: *"Intellectual Property Rights (IPRs); Essential, or potentially Essential, IPRs notified to ETSI in respect of ETSI standards"*, which is available from the ETSI Secretariat. Latest updates are available on the ETSI Web server (<http://www.etsi.org/ipr>).

Pursuant to the ETSI IPR Policy, no investigation, including IPR searches, has been carried out by ETSI. No guarantee can be given as to the existence of other IPRs not referenced in ETSI SR 000 314 (or the updates on the ETSI Web server) which are, or may be, or may become, essential to the present document.

## Foreword

This European Standard (Telecommunications series) has been produced by ETSI Technical Committee Special Mobile Group (SMG).

The present document specifies the inband control of remote transcoders and rate adaptors for Full Rate speech, Enhanced Full Rate speech, Adaptive Multi-Rate speech and full rate data within the Digital cellular telecommunications system (Phase 2+).

The specification from which the present document has been derived was originally based on CEPT documentation, hence the presentation of the present document may not be entirely in accordance with the ETSI/PNE Rules.

**iTeh STANDARD PREVIEW**  
The contents of the present document is subject to continuing work within SMG and may change following formal SMG approval. Should SMG modify the contents of the present document it will be re-released with an identifying change of release date and an increase in version number as follows:

Version 7.x.y

[SIST EN 300 737 V7.2.1:2003](#)

where:

<https://standards.iteh.ai/catalog/standards/sist/86b489d1-bc39-4eb7-a39e-4bdd590e70fd/sist-en-300-737-v7-2-1-2003>

7 indicates Release 1998 of GSM Phase 2+.

- x the second digit is incremented for all changes of substance, i.e. technical enhancements, corrections, updates, etc.
- y the third digit is incremented when editorial only changes have been incorporated in the specification.

<b>National transposition dates</b>	
Date of adoption of this EN:	12 May 2000
Date of latest announcement of this EN (doa):	31 August 2000
Date of latest publication of new National Standard or endorsement of this EN (dop/e):	29 February 2001
Date of withdrawal of any conflicting National Standard (dow):	29 February 2001

# 1 Scope

When 64 kbit/s traffic channels are used on the Abis interface, the speech shall be coded according to CCITT Recommendation G.711 and the data rate adaptation shall be as specified in GSM 04.21 and GSM 08.20.

In the case where 16 kbit/s traffic channels are used for full rate speech, enhanced full rate speech, Adaptive Multi-Rate speech or full rate data service, then the present document shall apply for frame structure and for control of remote transcoders and additional rate adaptors.

For Adaptive Multi-Rate speech the present document specifies the 16 kBit/s submultiplexing, both for the full and the half rate traffic channels (TCH/AFS and TCH/AHS). The specification for 8 kBit/s submultiplexing is given in GSM 08.61, both for the full and the half rate traffic channels (TCH/AFS and TCH/AHS).

The use and general aspects of the Abis interface are given in GSM 08.51.

**NOTE:** The present document should be considered together with the GSM 06 series of specifications, GSM 04.21 (Rate Adaptation on the MS-BSS Interface) and GSM 08.20 (Rate Adaptation on the BS/MSC Interface).

## 1.1 References

The following documents contain provisions which, through reference in this text, constitute provisions of the present document.

- References are either specific (identified by date of publication, edition number, version number, etc.) or non-specific.
  - For a specific reference, subsequent revisions do not apply.
  - For a non-specific reference, the latest [SIST EN 300 737 V7.2.1:2003](#) (<https://standards.iteh.ai/catalog/standards/sist/86b489d1-bc39-4eb7-a39e-4bdd590e70fd/sist-en-300-737-v7-2-1-2003>)
  - A non-specific reference to an ETSI shall also be taken to refer to later versions published as an EN with the same number.
  - For this Release 1998 document, references to GSM documents are for Release 1998 versions (version 7.x.y).

## 1.2 Abbreviations

Abbreviations used in the present document are listed in GSM 01.04. Additionally:

AMR	Adaptive Multi-Rate
CMC	Codec_Mode_Command
CMI	Codec_Mode_Indication
CMR	Codec_Mode_Request
Onset	Speech Onset Frame Classification
PAB	Phase Alignment Bit
PAC	Phase Alignment Command
RATSCCH	Robust AMR Traffic Synchronised Control CHannel
RIF	Request or Indication Flag
TAC	Time Alignment Command
TAE	Time Alignment Extension
TFO	Tandem Free Operation
TFOE	TFO Enable
UFE	Uplink Frame Error

## 2 General Approach

When the transcoders/rate adaptors are positioned remote to the BTS, the information between the Channel Codec Unit (CCU) and the remote Transcoder/Rate Adaptor Unit (TRAU) is transferred in frames with a fixed length of 320 bits (20 ms). In the present document, these frames are denoted "TRAU frames". Within these frames, both the speech/data and the TRAU associated control signals are transferred.

### ITEN STANDARD PREVIEW

The Abis interface should be the same if the transcoder is positioned 1) at the MSC site of the BSS or if it is positioned 2) at the BSC site of the BSS. In case 1), the BSC should be considered as transparent for 16 kbit/s channels.

In case of 4,8 and 9,6 kbit/s channel coding when data is adapted to the 320 bit frames, a conversion function is required in addition to the conversion/rate adaption specified in GSM 08.20. This function constitutes the RAA. In case of 14,5 kbit/s channel coding, no RAA rate adaption is required because V.110 framing is not used.

The TRAU is considered a part of the BSC, and the signalling between the BSC and the TRAU (e.g. detection of call release, handover and transfer of O&M information) may be performed by using BSC internal signals. The signalling between the CCU and the TRAU, using TRAU frames as specified in the present document, is mandatory when the Abis interface is applied.

NOTE: If standard 64 kbit/s switching is used in the BSC, multiplexing according to CCITT Recommendation I.460 should apply at both sides of the switch.

In figure 2.1, a possible configuration of the TRAU and the CCU is shown.

The functions inside the TRAU are:

- "Remote Transcoder and Rate Adaptor Control Function" (RTRACF);
- "Remote Speech Handler Function" (RSHF);
- The RAA function in case of 4,8 and 9,6 kbit/s channel coding;
- The RAA' function in case of 14,5 kbit/s channel coding;
- The RA2 function;
- The transcoder function.
- Optionally the TFO functions (see GSM 08.62).

The functions inside the CCU are:

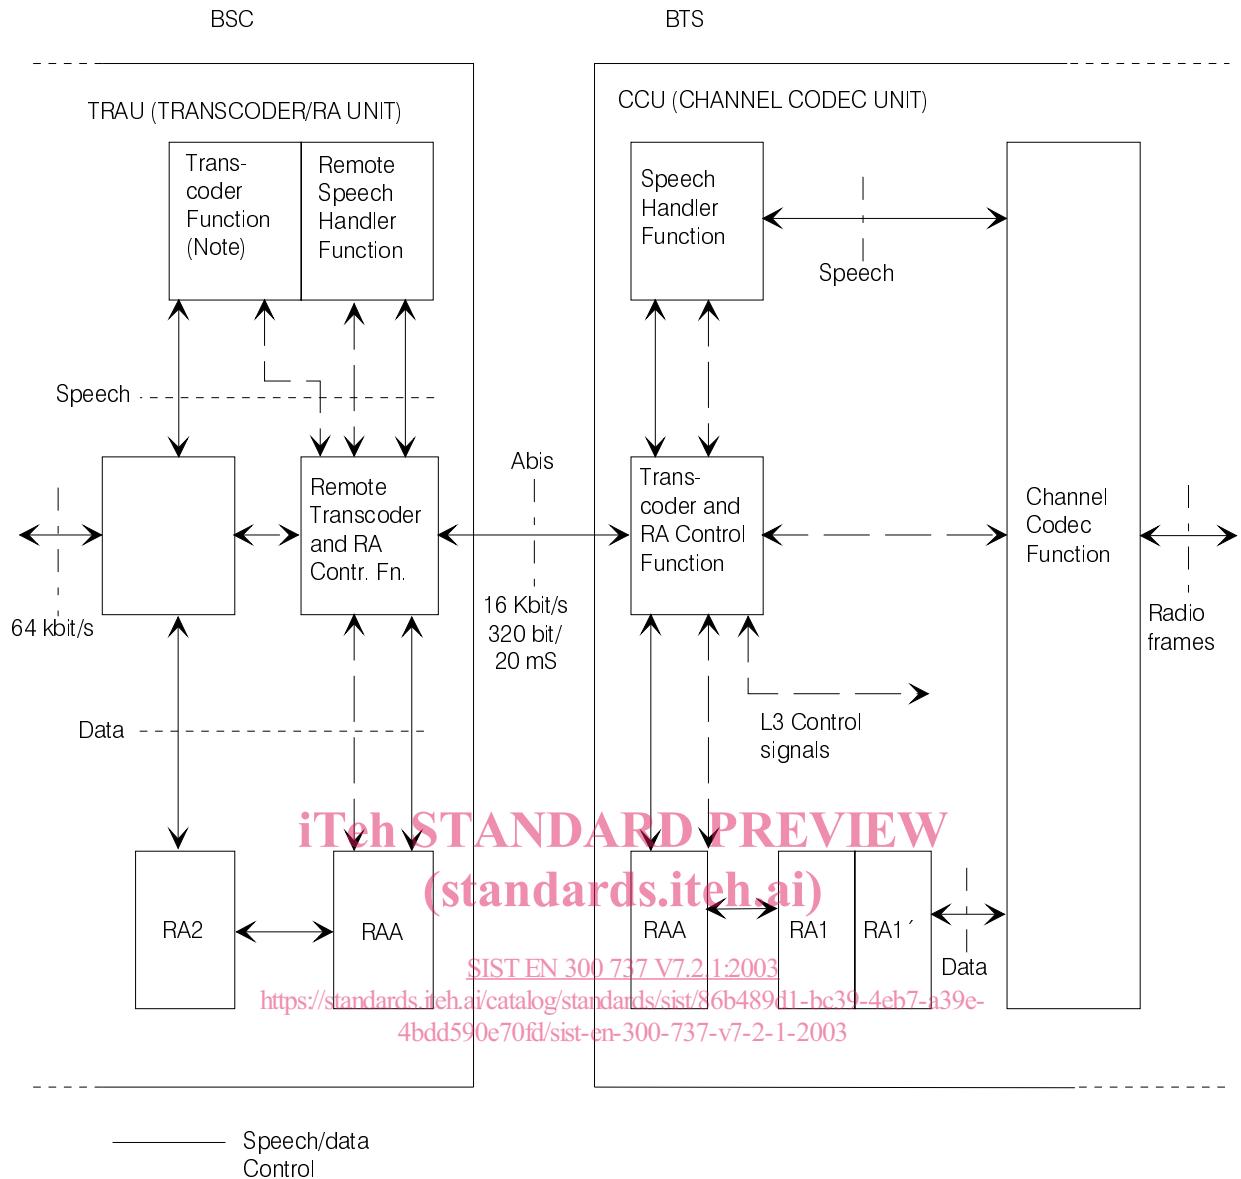

- "Transcoder and Rate Adaptor Control Function" (TRACF);
- "Speech Handler Function" (SHF);
- The RAA function in case of 4,8 kbit/s and 9,6 kbit/s channel coding;
- The RA1/RA1' function in case of 4,8 kbit/s and 9,6 kbit/s channel coding;
- The RA1'/RAA' function in case of 14,5 kbit/s channel coding;
- The channel codec function;
- If AMR is supported, the Link Adaptation (see GSM 05.09).

The present document will not describe the procedures inside the TRAU and the CCU. The layout in figure 2.1 is only intended as a reference model.

## iTeh STANDARD PREVIEW (standards.iteh.ai)

[SIST EN 300 737 V7.2.1:2003](#)

<https://standards.iteh.ai/catalog/standards/sist/86b489d1-bc39-4eb7-a39e-4bdd590e70fd/sist-en-300-737-v7-2-1-2003>

NOTE 1: This recommendation assumes the DTX handler function to be a part of the Transcoder Function.

NOTE 2: This figure applies only for 4,8 kbit/s and 9,6 kbit/s channel coding.

**Figure 2.1: Functional entities for handling of remote control of remote transcoders and rate adaptors**
