This European Standard was approved by CEN on 1994-10-03. CEN members are bound to comply with the CEN/CENELEC Internal Regulations which stipulate the conditions for giving this European Standard the status of a national standard without any alteration.

Up-to-date lists and bibliographical references concerning such national standards may be obtained on application to the Central Secretariat or to any CEN member.

The European Standards exist in three official versions (English, French, German). A version in any other language made by translation under the responsibility of a CEN member into its own language and notified to the Central Secretariat has the same status as the official versions.

CEN members are the national standards bodies of Austria, Belgium, Denmark, Finland, France, Germany, Greece, Iceland, Ireland, Italy, Luxembourg, Netherlands, Norway, Portugal, Spain, Sweden, Switzerland and United Kingdom.

Foreword

This European Standard has been prepared by SC 4 "Rotodynamic pumps" of CEN/TC 197 "Pumps" of which the Secretariat is held by DIN, based on a proposal, document CEN/TC 197/SC 4 N 22, submitted by the European Committee of Pump manufacturers (EUROPUMP) in December 1990 and was adopted for CEN enquiry at the meeting of CEN/TC 197/SC 4 on 1991-03-14 in Frankfurt.

This European Standard shall be given the status of a national standard, either by publication of an identical text or by endorsement, at the latest by October 1995, and conflicting national standards shall be withdrawn at the latest by October 1995.

According to the CEN/CENELEC Rules, the following countries are bound to implement this European Standard: Austria, Belgium, Denmark, Finland, France, Germany, Greece, Iceland, Ireland, Italy, Luxembourg, Netherlands, Norway, Portugal, Spain, Sweden, Switzerland and the United Kingdom.

EN 733:1995

1 Scope

This European Standard specifies the designations, nominal duty points and main dimensions of end-suction centrifugal pumps rated at 10 bar.

NOTE: Depending on special circumstances e.g. temperature, materials, sealing of the shafts etc., excess operating pressure need not attain the value of the nominal pressure under any circumstances.

2 Normative references

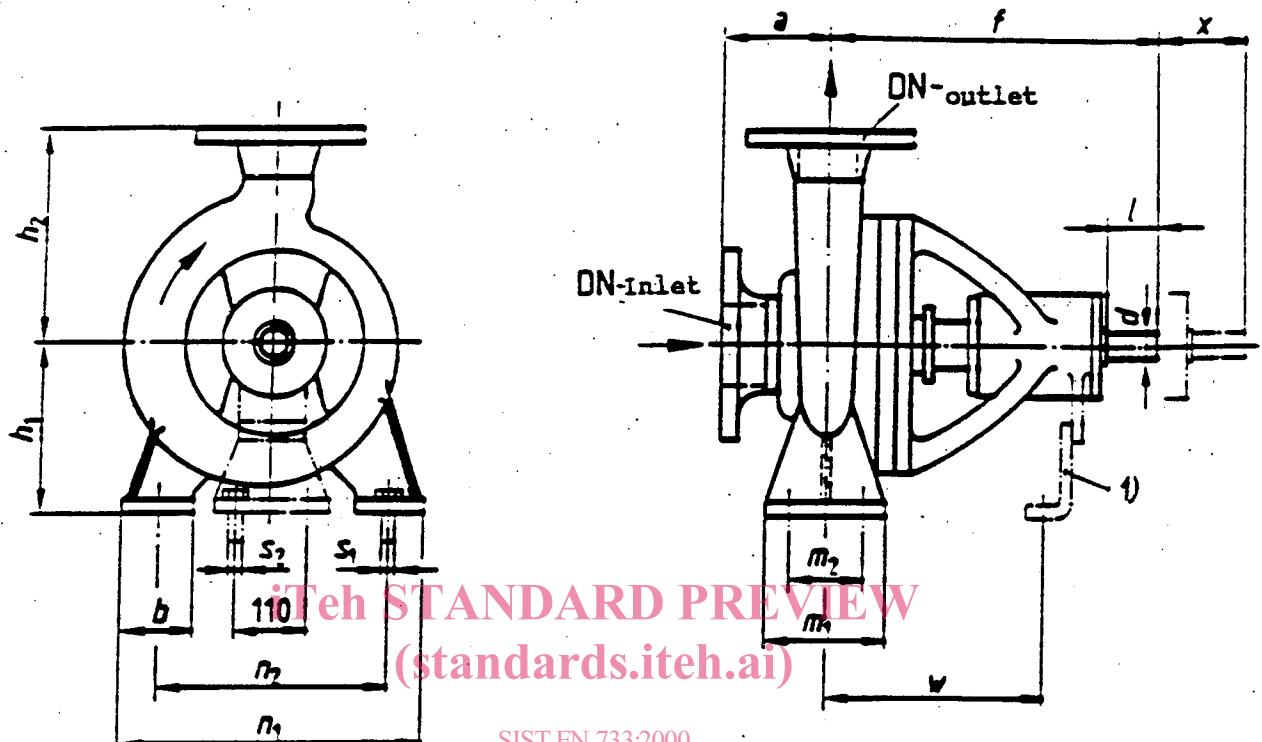

This European Standard incorporates by dated or undated reference, provisions from other publications. These normative references are cited at the appropriate place in the text and the publications are listed hereafter. For dated references, subsequent amendments to or revisions of any of these publications apply to this European Standard only when incorporated in it by amendment or revision. For undated references the latest edition of the publication referred to applies.

3 Nominal duty point and main dimensions

The nominal duty point and main dimensions appropriate to the relevant pump designation shall be as given in table 1 and as illustrated in figure 1.

Figure 1 illustrates a pictorial representation of an end suction centrifugal pump. Pumps to this standard do not need to correspond to this pictorial representation, only the indicated dimensions and direction of rotation are to be as specified.

SIST EN 733:2000

1) Rear foot bearing housing at manufacturers discretion

Figure 1: Main dimensions

4 Hydrostatic pressure test

Hydrostatic pressure test is an internal pressure test using water.

Hydrostatic test pressure shall be 1,3 times the maximum discharge pressure but shall not exceed 13 bar.

The relation between cold test pressure and hot operating pressure or extreme cold operating pressure, shall be the subject of agreements between purchaser and manufacturer.

Table 1: Nominal duty point and main dimensions

| Size | Nominal duty point | | | Flange mounting dimensions for PN 10(2) | | | Pump dimensions mm | | | Foot dimensions mm | | | Shaft end dimensions | | | | | | | | | | |

1) The nominal delivery head values indicated for the nominal supply values are approximate values only. The precise values may be found in the manufacturer's literature.

2) According to ISO 7005 Parts 1,2 and 3 the permitted temperature range may be found in the manufacturer's literature.

- 3) Dimension to be considered by the manufacturer in respect of removal of inner parts of the pump. The dimension x must not be identical with the distance between the shafts of the pump and the driving machine. The given dimension considers the use of flexible shaft couplings with spacer sleeve. The gap is necessary for the withdrawal of the rotor toward the driven side.
