This document is not an ASTM standard and is intended only to provide the user of an ASTM standard an indication of what changes have been made to the previous version. Because it may not be technically possible to adequately depict all changes accurately, ASTM recommends that users consult prior editions as appropriate. In all cases only the current version of the standard as published by ASTM is to be considered the official document.

Designation: E2995 - 14 E2995 - 15

Standard Specification for ASTM Thermohydrometers with Integral Low-Hazard Thermometers¹

This standard is issued under the fixed designation E2995; the number immediately following the designation indicates the year of original adoption or, in the case of revision, the year of last revision. A number in parentheses indicates the year of last reapproval. A superscript epsilon (ε) indicates an editorial change since the last revision or reapproval.

1. Scope

1.1 This specification covers glass thermohydrometers of various scale graduation systems, intended for use in a variety of ASTM Test Methods.

1.2 The thermohydrometers presented in this standard are not exact replacements for the thermohydrometers in Specification E100; the thermometers have larger maximum permissible scale errors than do their Hg-filled counterparts. The user should decide if these thermohydrometers are appropriate for use in his or her application.

1.3 This standard does not purport to address all of the safety concerns, if any, associated with its use. It is the responsibility of the user of this standard to establish appropriate safety and health practices and determine the applicability of regulatory limitations prior to use.

E100 Specification for ASTM Hydrometers
E126 Test Method for Inspection, Calibration, and Verification of ASTM Hydrometers

E344 Terminology Relating to Thermometry and Hydrometry

3. Terminology

<u>ASTM E2995-15</u>

3.1 Definitions—The definitions given in Terminology E344 apply. 232-4fe8-a694-d0e92004bcf6/astm-e2995-15

3.2 Definitions of Terms Specific to This Standard:

3.2.1 *ledger paper, n*—a paper characterized by strength, high tearing resistance, eraseability, water resistance, ink receptivity, uniformity of surface, and smoothness.

³ The last approved version of this historical standard is referenced on www.astm.org.

3.2.1.1 Discussion—

Originally, ledger paper was used especially for pen and ink records. Most ledger papers are surface sized, frequently subjected to appreciable wear, and must have a high degree of permanence and durability.

3.2.2 *length of the scale, n*—length of the nominal range in the stem, not including graduations extending above and below the nominal limits.

3.2.3 thermohydrometer, n-glass hydrometer having an integral thermometer.

3.2.4 top of the thermohydrometer, n-top of the finished instrument.

¹This specification is under the jurisdiction of ASTM Committee E20 on Temperature Measurement and is the direct responsibility of Subcommittee E20.05 on Liquid-in-Glass Thermometers and Hydrometers.

Current edition approved Dec. 1, 2014Aug. 1, 2015. Published December 2014August 2015. Originally approved in 1910. Last previous edition approved in 2014 as E2995 – 14. DOI: 10.1520/E2995-1410.1520/E2995-15

🕼 E2995 – 15

3.2.5 total length, n—overall length of the finished thermohydrometer.instrument.

4. Specifications

4.1 Thermohydrometers shall conform to the detailed specifications in Table 1 and to the general requirements specified in Sections 5 - 15.

4.2 Thermohydrometers shall conform to the inspection criteria found in Section 16 and the calibration and verification criteria found in Section 14.

4.3 Thermohydrometers manufactured to previous revisions of this specification shall retain the same ASTM status as those meeting current specifications.

4.4 At time of purchase, scale errors shall not exceed the maximum permissible scale error found in Table 1.

NOTE 1—**Caution**—Users should be aware that both temperature and density indications of thermohydrometers may change with rough handling, shock, exposure to aggressive liquids, and thermal cycling, among other factors. Consequently, test results and performance obtained at the time of manufacture may not necessarily apply throughout an extended period of use. Periodic calibration or verification of these instruments, in accordance with procedures set forth in Standard Test Method E126, (for the hydrometer), or Standard Test Method E77 is recommended (for the integral thermometer), is recommended.

5. Type

5.1 Thermohydrometers shall be of the constant mass, variable displacement type. Thermohydrometers shall be made of glass, except for the scale, ballast, cement, and the thermometric liquid of the thermometer.

5.2 The outer surface of the stem and body shall be symmetrical about the vertical axis. There shall be no uneven or unnecessary thickening of the walls, and no abrupt changes or constrictions that would hinder thorough cleaning or tend to trap air bubbles when the instrument is immersed.

5.3 The thermohydrometer shall float with its axis vertical in the liquids for which it is intended.

5.4 The thermohydrometer shall be thoroughly dry on the inside when sealed. The top of the stem shall be neatly rounded without unnecessary thickening.

5.5 The glass shall be smooth, transparent, and free of bubbles, strain patterns, cracks, or other imperfections that might interfere with the use of the thermohydrometer. The glass shall adequately resist the reaction of chemical agents to which thermohydrometers may be exposed, and also shall have suitable thermal properties to permit its use over the range of temperatures to which it may be subjected. In general, glasses suitable for constructing the bulbs of thermometers are satisfactory for thermohydrometers.

5.6 The API thermohydrometers are intended for use in conjunction with Test Method <u>D287</u>D287, with hydrometer readings being corrected in accordance with Guide D1250, IP 200. Therefore, these thermohydrometers shall be made of glass having a cubical coefficient of expansion of approximately $0.000023/1^{\circ}$ C or $0.0000128/1^{\circ}$ F.

6. Body

6.1 The preferred shapes for thermohydrometers in this specification is shown in Fig. 1.

7. Ballast

7.1 Material used for ballast shall be secured to the lower part of the body, with no loose material of any sort inside the thermohydrometer. When cement is used to hold the ballast securely in place, this cement shall not soften below 105°C (221°F).

7.2 If shot is used and sealed with wax, the wax shall not soften below 105°C (221°F)

8. Stem

8.1 The stem shall be uniform in cross section, with no perceptible irregularities. It shall extend at least 15 mm above the top graduation, and remain cylindrical for at least 3 mm below the lowest graduation.

9. Scale

9.1 The material for the scale is not specified. However, if paper is used, ledger paper, meeting the specifications in Specification D3290, shall be used. The scale may be anchored by a design which prevents it from moving; otherwise it shall be fixed in place with a cement that will not soften below 105° C (221°F) and will not deteriorate with time. The paper shall show no evidence of scorching or charring when received, or after use at 105° C (221°F). The scale shall be straight and without twist.

10. Markings

10.1 Graduation lines and inscriptions shall be in a permanent black marking material, such as India ink.
