This document is not an ASTM standard and is intended only to provide the user of an ASTM standard an indication of what changes have been made to the previous version. Because it may not be technically possible to adequately depict all changes accurately, ASTM recommends that users consult prior editions as appropriate. In all cases only the current version of the standard as published by ASTM is to be considered the official document.

Designation: A488/A488M - 12 A488/A488M - 16

## Standard Practice for Steel Castings, Welding, Qualifications of Procedures and Personnel<sup>1</sup>

This standard is issued under the fixed designation A488/A488M; the number immediately following the designation indicates the year of original adoption or, in the case of revision, the year of last revision. A number in parentheses indicates the year of last reapproval. A superscript epsilon ( $\varepsilon$ ) indicates an editorial change since the last revision or reapproval.

This standard has been approved for use by agencies of the U.S. Department of Defense.

#### 1. Scope\*

1.1 This practice covers the qualification of procedures, welders, and operators for the fabrication and repair of steel castings by electric arc welding.

1.1.1 Qualifications of a procedure and either or both the operator or welder under Section IX of the ASME Boiler and Pressure Vessel Code shall automatically qualify the procedure and either or both the operator or welder under this practice. P-number designations in the ASME grouping of base metals for qualification may be different than the category numbers listed in Table 1. Refer to Appendix X1 for a comparison of ASTM category numbers with the corresponding ASME P-Number designations.

1.2 Each manufacturer or contractor is responsible for the welding done by his organization and shall conduct the tests required to qualify his welding procedures, welders, and operators.

1.3 Each manufacturer or contractor shall maintain a record of welding procedure qualification tests (Fig. 1), welder or operator performance qualification tests (Fig. 2), and welding procedure specification (Fig. 3), which shall be made available to the purchaser's representative on request.

1.4 The values stated in either SI units or inch-pound units are to be regarded separately as standard. The values stated in each system may not be exact equivalents; therefore, each system shall be used independently of the other. Combining values from the two systems may result in non-conformance with the standard.

1.4.1 SI Units-Within the text, the SI units are shown in brackets.

1.5 This standard does not purport to address all of the safety concerns, if any, associated with its use. It is the responsibility of the user of this standard to establish appropriate safety and health practices and determine the applicability of regulatory limitations prior to use.

2.1 ASTM Standards:<sup>2</sup>

A27/A27M Specification for Steel Castings, Carbon, for General Application

A128/A128M Specification for Steel Castings, Austenitic Manganese

A148/A148M Specification for Steel Castings, High Strength, for Structural Purposes

A216/A216M Specification for Steel Castings, Carbon, Suitable for Fusion Welding, for High-Temperature Service

- A217/A217M Specification for Steel Castings, Martensitic Stainless and Alloy, for Pressure-Containing Parts, Suitable for High-Temperature Service
- A297/A297M Specification for Steel Castings, Iron-Chromium and Iron-Chromium-Nickel, Heat Resistant, for General Application

A351/A351M Specification for Castings, Austenitic, for Pressure-Containing Parts

A352/A352M Specification for Steel Castings, Ferritic and Martensitic, for Pressure-Containing Parts, Suitable for Low-Temperature Service

A356/A356M Specification for Steel Castings, Carbon, Low Alloy, and Stainless Steel, Heavy-Walled for Steam Turbines

<sup>&</sup>lt;sup>1</sup> This practice is under the jurisdiction of ASTM Committee A01 on Steel, Stainless Steel and Related Alloys and is the direct responsibility of Subcommittee A01.18 on Castings.

Current edition approved Nov. 1, 2012 March 1, 2016. Published December 2012 March 2016. Originally approved in 1963. Last previous edition approved in  $\frac{20102012}{10.1520/A0488_A0488M - 12}$  as  $\frac{A488/A488M - 10.A488/A488M - 12}{10.1520/A0488_A0488M - 12}$ .

A370 Test Methods and Definitions for Mechanical Testing of Steel Products

A389/A389M Specification for Steel Castings, Alloy, Specially Heat-Treated, for Pressure-Containing Parts, Suitable for High-Temperature Service

A447/A447M Specification for Steel Castings, Chromium-Nickel-Iron Alloy (25-12 Class), for High-Temperature Service

A487/A487M Specification for Steel Castings Suitable for Pressure Service

A494/A494M Specification for Castings, Nickel and Nickel Alloy

A732/A732M Specification for Castings, Investment, Carbon and Low Alloy Steel for General Application, and Cobalt Alloy for High Strength at Elevated Temperatures

A743/A743M Specification for Castings, Iron-Chromium, Iron-Chromium-Nickel, Corrosion Resistant, for General Application A744/A744M Specification for Castings, Iron-Chromium-Nickel, Corrosion Resistant, for Severe Service

A747/A747M Specification for Steel Castings, Stainless, Precipitation Hardening

A757/A757M Specification for Steel Castings, Ferritic and Martensitic, for Pressure-Containing and Other Applications, for Low-Temperature Service

A872/A872M Specification for Centrifugally Cast Ferritic/Austenitic Stainless Steel Pipe for Corrosive Environments

A890/A890M Specification for Castings, Iron-Chromium-Nickel-Molybdenum Corrosion-Resistant, Duplex (Austenitic/ Ferritic) for General Application

A958 Specification for Steel Castings, Carbon and Alloy, with Tensile Requirements, Chemical Requirements Similar to Standard Wrought Grades

A990 Specification for Castings, Iron-Nickel-Chromium and Nickel Alloys, Specially Controlled for Pressure Retaining Parts for Corrosive Service

A995/A995M Specification for Castings, Austenitic-Ferritic (Duplex) Stainless Steel, for Pressure-Containing Parts

2.2 American Society of Mechanical Engineers:<sup>3</sup>

ASME Boiler and Pressure Vessel Code, Section IX

2.3 American Welding Society:<sup>4</sup>

ANSI/AWS 3.0 Definitions for Welding and Cutting

#### 3. Terminology

3.1 *Definitions*—Definitions of terms relating to welding shall be in agreement with the definitions of the American Welding Society, ANSI/AWS A3.0.

#### 4. Weld Orientation

4.1 Orientation—The orientation of welds with respect to horizontal and vertical planes of reference are classified into four positions, namely, flat, horizontal, vertical, and overhead as shown in Fig. 4. Test material shall be oriented as shown in Fig. 4; however, an angular deviation of  $\pm 15^{\circ}$  from the specified horizontal and vertical planes is permitted during welding.

4.2 *Flat Position* (Fig. 4(a))—This position covers plate in a horizontal plane with the weld metal deposited from above, or pipe or a cylindrical casting with its axis horizontal and rolled during welding so that the weld metal is deposited from above.

4.3 Horizontal Position (Fig. 4(b))—This position covers plate in a vertical plane with the axis of the weld horizontal, or pipe or a cylindrical casting with its axis vertical and the axis of the weld horizontal.

4.4 Vertical Position (Fig. 4(c))—In this position, the plate is in a vertical plane with the axis of the weld vertical.

4.5 Overhead Position (Fig. 4(d))—In this position, the plate is in a horizontal plane with the weld metal deposited from underneath.

4.6 Horizontal Fixed Position (Fig. 4(e))—In this position, the pipe or cylindrical casting has its axis horizontal and the welding groove in a vertical plane. Welding shall be done without rotating the pipe or casting so that the weld metal is deposited from the flat, vertical, and overhead position.

4.7 *Qualification*—Qualification in the horizontal, vertical, or overhead position shall qualify also for the flat position. Qualification in the horizontal fixed position, or in the horizontal and vertical and overhead positions, shall qualify for all positions.

## A488/A488M - 16

#### **REPORT FORM 3**

#### RECOMMENDED FORM FOR WELDING PROCEDURE SPECIFICATION

#### 1. Title

- Welding of A steel castings.
- A Indicate general material description, such as carbon, Cr-Mo, 12 Cr, etc.
- 2. Specification No. Rev.

#### Date 3. Scope

- 3.1 Procedure Specification No. \_\_\_\_\_ covers t steel castings using the<sup>B</sup>\_\_\_\_\_ welding process. covers the welding of<sup>A</sup>

- <sup>A</sup> Indicate general material description in the Title.
- <sup>B</sup> Indicate specific welding process, such as shielded metal are, etc. 4. Base Material
- 4.1 The base material shall conform to the specification for<sup>A</sup>
- which is found in materials category number<sup>B</sup>\_. <sup>A</sup> Insert reference to ASTM designation or indicate chemical analysis and physical properties.
- <sup>B</sup> Indicate category number from Table 1.
- 4.2 Base material shall be in the<sup>A</sup>\_\_\_\_\_ heat treated condition before welding.
- <sup>A</sup> Indicate heat treatment before welding.

#### 5. Filler Metal

5.1 The filler metal shall conform to ANSI/AWS Specification<sup>A</sup>\_\_\_\_

which is found in weld metal analysis group A \_\_\_\_\_ - A Indicate appropriate American Welding Society specification number and filler metal classification (e.g., A5.1 E7018).

- <sup>B</sup> Indicate A Number from Table 4.

5.2 Flux for submerged arc welding shall conform to the following nominal composition:A

<sup>A</sup> Indicate chemical composition or trade designation.

5.3 Shielding gas for gas shielded arc welding shall conform to the following nominal composition: A

A Indicate the single gas or proportional parts of mixed gases and flow rates. 6. Preparation of Base Material

6.1 Metal removal shall be performed by<sup>A</sup>

<sup>A</sup> Indicate method of metal removal, such as chipping, grinding, carbon arc cutting, frame cutting, etc. Also indicate whether preheat is required during metal removal.

6.2 Configuration of the weld preparation for partial penetration welds shall conform to the following geometry:<sup>A</sup>\_

A Indicate minimum root radius and minimum side wall angle.

6.3 Configuration of the weld preparation for full penetration welds shall conform to the following geometry:A

<sup>A</sup> Indicate minimum side wall angle. 6.4 Backing plates shall be used for welding full penetration welds.

Backing plates shall be made from<sup>A</sup> steel and shall fit the back of the cavity with a minimum gap of<sup>B</sup>\_

A Indicate material of backing plate.

-B Indicate dimension of maximum gap.

6.5 Surfaces of the weld preparation shall be cleaned of all oil, grease, dirt, scale, slag, shot blasting grit, or any foreign material which may be harmful to the quality of the weld. Surfaces of backing plates when used shall also meet the same cleanliness requirements. 6.6 All surfaces of the weld preparation shall be inspected as follows:A .

A Indicate type of inspection.

#### 7. Preheat

7.1 Preheat and interpass temperature shall be maintained in the range from<sup>A</sup> -to<sup>B</sup> during

<sup>A</sup> Indicate minimum temperature.

B Indicate maximum temperature

C Indicate if preheat maintenance is during welding or until postweld heat treatment is performed.

7.2 Preheat for tack welding of backing plates is the same as required for welding.

7.3 Minimum temperature before applying heat shall be<sup>A</sup>\_\_\_\_ A Indicate temperature.

-7.4 Local preheating to the temperatures indicated may be performed

so that the heated area completely surrounds the weld preparation for a minimum distance of<sup>A</sup>\_\_\_\_\_ \_ in any direction.

A Indicate minimum distance for local preheating.

8. Welding Position

8.1 Welds shall be made in the<sup>A</sup> \_ position. A Indicate position or positions in which the welding will be performed. See Fig. 4.

#### 9. Electrical Characteristics

A. The base material shall be attached 9.1 The current used shall be B welding electrode lead. to the

A Indicate whether direct or alternating current. If direct, state whether non-pulsed or pulsed. If pulsed, state frequency.

<sup>B</sup> Indicate whether electrode positive (EP) or electrode negative (EN) output terminal of power supply is used.

- Flectrode
- Wire

Diameter<sup>A</sup> Amperage<sup>A</sup> Range<sup>A</sup> Voltage<sup>A</sup>

-A Indicate for each diameter of electrode, the amperage, the range of amperage permitted, and the voltage requirements. For welding processes using wire, indicate wire diameter, wire feed speed, and current requirements.

9.2 Electrodes subject to moisture absorption must be stored and handled to maintain dryness according to the following:

<sup>A</sup> Where applicable, indicate electrode care instructions.

#### 10. Welding Details

10.1 The width of any pass of welding shall not exceed<sup>A</sup>\_\_\_\_ times the size of the filler metal used.

A Indicate the number for controlling the maximum width. 10.2 Craters shall be properly filled before each interruption of the arc.

10.3 Slag or flux shall be removed on any bead before depositing the next successive bead.

10.4 Interpass inspection shall be performed according to the following:<sup>A</sup>

<u>A Indicate degree of interpass inspection required.</u>

10.5 Peening shall be performed according to the following:<sup>A</sup>

A Indicate the degree of peening required. Indicate any limits on peening first and last lavers.

#### **11. Post-Weld Heat Treatment**

11.1 Post-weld heat treatment shall consist of the following:<sup>A</sup>\_

A Indicate the heating and cooking rates, holding temperatures and times. 12. Inspection

12.1 Inspection of the completed weld shall be performed according to the following:A

A Indicate degree of inspection.

## 🖽 A488/A488M – 16

#### 1. Title

Welding of A steel castings.

- <sup>A</sup> Indicate general material description, such as carbon, Cr-Mo, 12 Cr, etc. 2. Specification No. Rev.
- Date

#### 3. Scope

3.1 Procedure Specification No. covers the welding of<sup>A</sup> steel castings using the<sup>B</sup> welding process.

- Indicate general material description in the Title.
- <sup>B</sup> Indicate specific welding process, such as shielded metal arc, etc.

4. Base Material

- 4.1 The base material shall conform to the specification for<sup>A</sup>
- which is found in materials category number<sup>B</sup>\_\_\_\_\_\_. <sup>A</sup> Insert reference to ASTM designation or indicate chemical analysis and physical properties.
- <sup>B</sup> Indicate category number from Table 1.
- 4.2 Base material shall be in the<sup>A</sup> heat treated condition before
- welding. <sup>A</sup> Indicate heat treatment before welding.

#### 5. Filler Metal

5.1 The filler metal shall conform to ANSI/AWS Specification<sup>A</sup> which is found in weld metal analysis group A

- <sup>A</sup> Indicate appropriate American Welding Society specification number and filler metal classification (e.g., A5.1 E7018). <sup>B</sup> Indicate A Number from Table 4.
- 5.2 Flux for submerged arc welding shall conform to the following nominal composition:<sup>A</sup> <sup>A</sup> Indicate chemical composition or trade designation.
- 5.3 Shielding gas for gas shielded arc welding shall conform to the
- following nominal composition: /
- <sup>A</sup> Indicate the single gas or proportional parts of mixed gases and flow rates. 6. Preparation of Base Material

6.1 Metal removal shall be performed by<sup>A</sup>

<sup>A</sup> Indicate method of metal removal, such as chipping, grinding, carbon arc cutting, frame cutting, etc. Also indicate whether preheat is required during metal removal.

- 6.2 Configuration of the weld preparation for partial penetration welds shall conform to the following geometry:<sup>A</sup>\_\_\_\_\_\_
- <sup>A</sup> Indicate minimum root radius and minimum side wall angle.
- 6.3 Configuration of the weld preparation for full penetration welds shall conform to the following geometry:<sup>2</sup>
- <sup>A</sup> Indicate minimum side wall angle.
- 6.4 Backing plates shall be used for welding full penetration welds Backing plates shall be made from<sup>A</sup> steel and shall fit the back of
- the cavity with a minimum gap of<sup>B</sup>
- <sup>A</sup> Indicate material of backing plate.
- <sup>B</sup> Indicate dimension of maximum gap. 6.5 Surfaces of the weld preparation shall be cleaned of all oil, grease, dirt, scale, slag, shot blasting grit, or any foreign material which may
- be harmful to the quality of the weld. Surfaces of backing plates
- when used shall also meet the same cleanliness requirements. 6.6 All surfaces of the weld preparation shall be inspected as follows:<sup>A</sup>\_\_\_\_\_.

<sup>A</sup> Indicate type of inspection.

#### 7. Preheat

7.1 Preheat and interpass temperature shall be maintained in the range to<sup>B</sup> from<sup>A</sup> during

- Indicate minimum temperature.
- <sup>B</sup> Indicate maximum temperature

<sup>C</sup> Indicate if preheat maintenance is during welding or until postweld heat treatment is performed.

7.2 Preheat for tack welding of backing plates is the same as required for welding.

- 7.3 Minimum temperature before applying heat shall be<sup>A</sup>
- <sup>A</sup> Indicate temperature.
- 7.4 Local preheating to the temperatures indicated may be performed

so that the heated area completely surrounds the weld preparation for a minimum distance of<sup>4</sup>\_\_\_\_\_ in any direction.

- <sup>A</sup> Indicate minimum distance for local preheating.
- 8. Welding Position
- 8.1 Welds shall be made in the<sup>A</sup> position.
- <sup>A</sup> Indicate position or positions in which the welding will be performed. See Fig. 4.

#### 9. Electrical Characteristics

9.1 The current used shall be <sup>A</sup>. The base material shall be attached <sup>B</sup> welding electrode lead. to the

- <sup>A</sup> Indicate whether direct or alternating current. If direct, state whether
- non-pulsed or pulsed. If pulsed, state frequency. <sup>B</sup> Indicate whether electrode positive (EP) or electrode negative (EN) output

terminal of power supply is used.

Electrode Wire

- Diameter<sup>A</sup> Amperage<sup>A</sup> Range<sup>A</sup> Voltage<sup>A</sup>
- <sup>A</sup> Indicate for each diameter of electrode, the amperage, the range of
- amperage permitted, and the voltage requirements. For welding processes using wire, indicate wire diameter, wire feed speed, and current requirements.
- 9.2 Electrodes subject to moisture absorption must be stored and handled to maintain dryness according to the following:<sup>A</sup>\_\_\_\_\_\_ <sup>A</sup> Where applicable, indicate electrode care instructions.
- 10. Welding Details
- 10.1 The width of any pass of welding shall not exceed<sup>A</sup> times the size of the filler metal used.
- <sup>4</sup> Indicate the number for controlling the maximum width.
- 10.2 Craters shall be properly filled before each interruption of the arc.
- 10.3 Slag or flux shall be removed on any bead before depositing the next successive bead.
- 10.4 Interpass inspection shall be performed according to the following:<sup>A</sup>
- <sup>A</sup> Indicate degree of interpass inspection required.
- 10.5 Peening shall be performed according to the following:<sup>A</sup>
- <sup>A</sup> Indicate the degree of peening required. Indicate any limits on peening first and last layers.
- 11. Post-Weld Heat Treatment
- 11.1 Post-weld heat treatment shall consist of the following:<sup>A</sup>
- <sup>A</sup> Indicate the heating and cooking rates, holding temperatures and times. 12. Inspection
- 12.1 Inspection of the completed weld shall be performed according to the following:A

<sup>4</sup> Indicate degree of inspection.
