**FOREWORD** 

ISO (the International Organization for Standardization) is a worldwide federation of national standards institutes (ISO member bodies). The work of developing International Standards is carried out through ISO technical committees. Every member body interested in a subject for which a technical committee has been set up has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work.

Draft International Standards adopted by the technical committees are circulated to the member bodies for approval before their acceptance as International Standards by the ISO Council.

International Standard ISO 3866 was developed by Technical Committee ISO/TC 95, *Office machines*, and was circulated to the member bodies in July 1975.

It has been approved by the member bodies of the following countries:

Australia

Iran

Turkev

Czechoslovakia

Italy

United Kingdom

France

Mexico

U.S.A.

Germany

Office machines and printing machines used for information processing — Widths of fabric printing ribbons on spools exceeding 19 mm

### 1 SCOPE AND FIELD OF APPLICATION

This International Standard specifies the principal widths to be retained for fabric printing ribbons wider than 19 mm on spools intended for office machines and machines used for information processing.

It complements ISO 2257, Office machines and printing machines used for information processing — Widths of fabric printing ribbons on spools, which is limited to ribbons of 19 mm width and less.

### 2 WIDTHS OF PRINTING RIBBONS

### 2.1 Widths for office machines
