

Designation: E3008/E3008M – 16

## Standard Classification for Transportation Surface Elements—UNIFORMAT II<sup>1</sup>

This standard is issued under the fixed designation E3008/E3008M; the number immediately following the designation indicates the year of original adoption or, in the case of revision, the year of last revision. A number in parentheses indicates the year of last approval. A superscript epsilon ( $\epsilon$ ) indicates an editorial change since the last revision or reapproval.

### 1. Scope

1.1 This standard establishes a classification of transportation surface elements within the UNIFORMAT II family of elemental classifications. It covers the full breadth of vehicular transportation surfaces, from rural roads to multi-lane interstate highways.

1.2 UNIFORMAT II classifications have an elemental format similar to the original UNIFORMAT<sup>2</sup> building elemental classification. However, the title UNIFORMAT II differs from the original in that it now takes into consideration a wide range of constructed entities that collectively form the built environment.

1.3 Elements, as defined here and in Classifications E1557 and E2103/E2103M, are major physical components that are common within constructed entities. Elements perform their given function(s), regardless of the design specification, construction method, or materials used.

1.4 This elemental classification serves as a consistent reference for analysis, evaluation, and monitoring during the feasibility, planning, and design stages when constructing transportation surfaces.

1.5 Using UNIFORMAT II elemental classifications ensures a consistency in the economic evaluation of construction projects over time and from project to project.

1.6 UNIFORMAT II classifications also enhance reporting at all stages of a constructed entity's life cycle—from feasibility and planning through the preparation of working documents, construction, maintenance, rehabilitation, and disposal.

1.7 This classification is unsuitable for process applications or for preparing trade estimates.

1.8 The values stated in either SI units or inch-pound units are to be regarded separately as standard. The values stated in each system may not be exact equivalents; therefore, each

system shall be used independently of the other. Combining values from the two systems may result in non-conformance with the standard.

1.9 *This standard does not purport to address all of the safety concerns, if any, associated with its use. It is the responsibility of the user of this standard to establish appropriate safety and health practices and determine the applicability of regulatory limitations prior to use.*

### 3. Terminology

3.1 *Definitions*—For definitions of general terms related to building construction used in this classification, refer to Terminology **E631**, and for general terms related to building economics, refer to Terminology **E833**.

3.2 *Definitions of Terms Specific to This Standard*:

3.2.1 *element, n—in construction planning, design, specification, estimating, and cost analysis*, is a significant component part of the whole that performs a specific function, or functions, regardless of design, specification, or construction method.

3.2.2 *group element, n—in construction planning, design, specification, estimating, and cost analysis*, is a significant component part of the whole that includes relevant *elements* which, as a group, perform major specific function, or functions, regardless of design, specification, or construction method.

3.2.3 *major group element, n—in construction planning, design, specification, estimating, and cost analysis*, is a very significant component part of the whole that includes relevant *group elements* which, as a group, perform major specific function, or functions, regardless of design, specification, or construction method.

### 4. Significance and Use

4.1 This standard builds on the concepts and organizational framework established in Classification **E1557**. This classification describes transportation surface elements that are major components of most vehicular transportation surfaces. The elemental classification is the common thread linking activities and participants in a transportation surface project from initial planning through operations, maintenance, and disposal.

NOTE 1—As this classification refers solely to permanent, physical parts of any construction, two additional classifications, Classifications **E2083** and **E2168**, need to be included when calculating construction cost. These standards provide for the inclusion of construction enabling, temporary,

and risk mitigation cost figures. Procedures for reporting all these figures are described in Practices **E1804** and **E2514** and Classification **E2516**. While these three latter standards were primarily written for building construction, they are nonetheless appropriate and readily applied to other forms of construction as well.

4.2 The users of transportation surface UNIFORMAT II include:

4.2.1 *Financial and Investment*—Typically owners, developers, bankers, lenders, accountants, and financial managers.

4.2.2 *Implementation*—Primarily project managers; facilities programmers; designers, including engineers; and project controls specialists, including cost planners, estimators, schedulers, specification writers, and risk analysts.

4.2.3 *Facilities Management*—Comprising property portfolio managers, operating staff, and maintenance staff.

4.2.4 *Others*—Public officials, manufacturers, educators, students, and other project stakeholders.

4.3 *Apply This Classification When Undertaking the Following Work on Transportation Surface Projects*:<sup>5</sup>

4.3.1 *Financing and Investing*:

4.3.1.1 Structuring costs on an elemental basis for economic evaluations (Guide **E1185** and Practices **E917**, **E964**, **E1057**, **E1074**, **E1121**, and **E1804**) early in the design process helps reduce the cost of early financial analysis and can contribute to substantial design and operational savings before decisions have been made that limit options for potential savings.

4.3.2 *Implementing*:

4.3.2.1 *Cost Modeling, Cost Planning, Estimating and Controlling Project Time and Cost During Planning, Design, and Construction*—Use the transportation surface UNIFORMAT II classification to prepare budgets and to establish elemental cost plans before design begins. Project managers and project controls specialists use these cost plans against which to measure and control project cost, and quality, and to set design-to-cost targets.

4.3.2.2 *Conducting Value Engineering Workshops*—Conducting value engineering workshops (Practices **E1699** and **E2013**). Use this classification as a checklist to ensure that alternatives for all elements of significant cost in the transportation surface project are analyzed in the creativity phase of the job plan. Also, use the elemental cost data to expedite the development of cost models for transportation surface systems.

4.3.2.3 *Developing Initial Project Master Schedules*—Since projects are essentially built element by element, UNIFORMAT II classifications are an appropriate basis for preparing construction schedules at the start of the design process. Project managers and project controls specialists use these time

<sup>5</sup> For a more comprehensive discussion of the uses of UNIFORMAT II, see Bowen, Charette, and Marshall, UNIFORMAT II—A Recommended Classification for Building Elements and Related Sitework, National Institute of Standards and Technology, Special Publication 841, Gaithersburg, MD, 1992; Charette and Marshall, UNIFORMAT II Elemental Classification for Building Specifications, Cost Estimating, and Cost Analysis, National Institute of Standards and Technology, NISTIR 6389, Gaithersburg, MD, 1999; and Kasi and Chapman, Benefits of Using ASTM Building Economics Standards for the Design, Construction, and Operation of Constructed Facilities, National Institute of Standards and Technology, Special Publication 1098, Gaithersburg, MD, 2012.

<sup>4</sup> Available from ASTM International Headquarters. Order Adjunct No. ADJE091703. Original adjunct produced in 1984.

plans against which to measure and control project time (Practice E2691), and to set milestone target dates.

4.3.2.4 *Performing Risk Analyses—Simulation* (Guides E1369 and E2506) is one technique for developing probability distributions of transportation surface costs when evaluating the economic risk in undertaking a transportation surface project. Use individual elements and group elements in this classification for developing probability distributions of elemental costs. From these distributions, build up probability distributions of total costs to establish project contingencies (Practice E1946 and Classification E2168) or to serve as inputs to an economic analysis.

4.3.2.5 *Structuring Preliminary Project Descriptions During the Conceptual Design Phase*—This classification facilitates the description of the scope of the project in a clear, concise, and logical sequence for presentation to the client; it provides the basis for the preparation of more detailed elemental estimates during the early concept and preliminary design phases, and it enhances communication between designers and clients by providing a clear statement of the designer’s intent.

4.3.2.6 *Coding and Referencing Standard Details in Computer-Aided Design Systems*—This classification allows a designer, for example, to reference an assembly according to this classification’s element designations and build up a database of standard details. This is particularly appropriate to design modeling and building information modeling (BIM) applications.

4.3.3 *Managing Facilities:*

4.3.3.1 Recording and writing property condition assessment reports in a structured way, using UNIFORMAT II classifications, provides for a consistent, accessible, and searchable database of real property inventory.

4.3.4 *Other Activities:*

4.3.4.1 Structuring cost manuals and recording construction, operating, and maintenance costs in a computer database. Having a cost manual or computer database in an elemental format assists the preparation of an economic analysis early in the design stage and at a reasonable cost.

5. Basis of Classification

5.1 The framework in Fig. 1 shows the various constructed entities that collectively are used to create the built environment. Each entity is treated as a module. Appropriate modules used together will effectively describe any planned or built development. This standard classification describes exclusively the elements that make up one of those constructed entities, transportation surface, shown as the shaded block under the heading of Heavy (Civil) Entities.

5.1.1 This transportation surface classification is applicable to the full breadth of vehicular transportation surfaces. The classification includes unpaved roads, paved roads, and divided highways. The classification does not include the following types of transportation surfaces: driveways, railroads, and runways.

5.2 The classification is consistent with typical costing practices used at the conceptual design phase.

5.3 Each element has a significant impact on the cost, and it usually occurs frequently.

5.4 Each element performs a specific function.

5.5 Table 1 divides the classification of transportation surface elements into three hierarchical levels: Level 1—Major Group Elements, Level 2—Group Elements, and Level

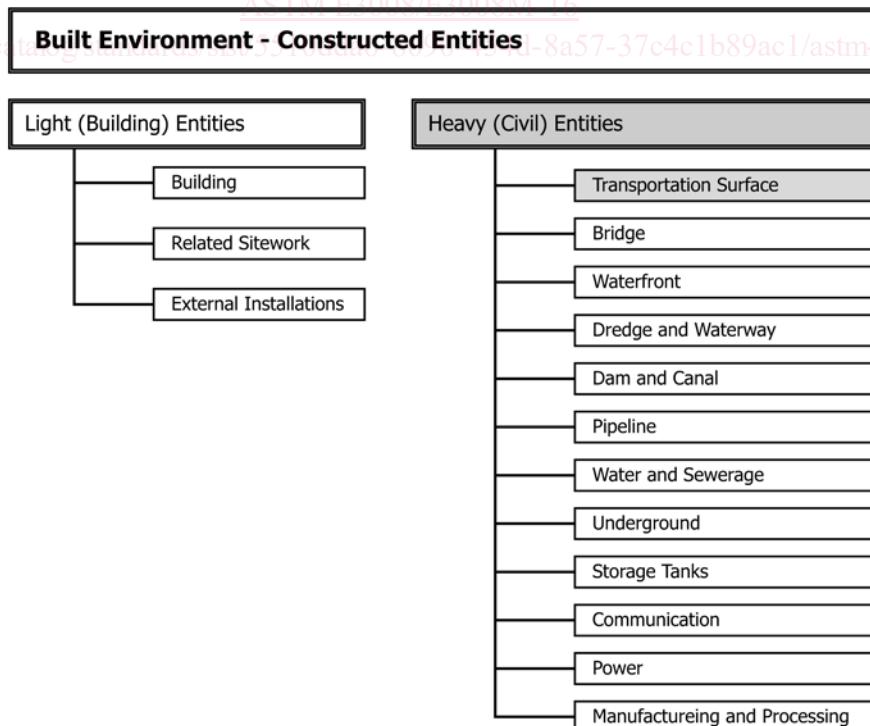

FIG. 1 List of Constructed Entities Suitable for Inclusion in the Family of UNIFORMAT II Elemental Classifications

3—Individual Elements. The Major Groups are listed in the normal chronological order of construction.

5.6 Sub-Classifications (not included in this standard) are named Sub-Elements and comprise as many hierarchical levels (Level 4 and below) as are deemed appropriate to the needs of that specific example.

5.7 The decision as to where among the classification elements to include specific construction items will rely on professional judgment as to where professionals in current practice normally look for such items.

5.8 Only items that impact the choice and cost of the surface transportation elements are included. Other civil works in the transportation system are not included. Consequently, this classification does not include utilities—pipelines (water, natural gas, and petroleum) and transmission lines (electrical, communication, and video)—sharing the same right of way as the transportation system.

5.9 Elements, as used and defined in UNIFORMAT II, will ideally display the following additional attributes:

- 5.9.1 Capable of being defined precisely;
- 5.9.2 Self explanatory;
- 5.9.3 Separable at all stages of development;
- 5.9.4 Quantifiable at all stages of development;
- 5.9.5 Capable of reconciliation with other elemental classifications;

5.9.6 Allow comparisons, project to project, in a meaningful way;

5.9.7 Is a functional component of the constructed entity.

5.10 Sitework elements are provided for exclusive use in support of the construction of transportation surfaces, not to classify elements of major civil construction works. Sitework elements presented in **Table 1** are designed to provide sufficient detail to planners so they will not need to resort to other elemental classifications when working on a transportation surface project.

## 6. Description of UNIFORMAT II Transportation Surface Elements and Units of Measure

6.1 *Elements and Functions*—**Table 2** provides, for each Level 3 Individual Element, the name, description, inclusions, exclusions, and unit of measure.

6.2 *Description*—The element descriptions help you understand the purpose and application of the element.

6.3 *Includes*—The purpose of the element inclusions is to list features that make up the element.

6.4 *Excludes*—The purpose of the element exclusions is to list features that are not included in the element but which are included elsewhere in this classification.

**TABLE 2 Description of UNIFORMAT II Transportation Surface Elements and Units of Measure**

<b>A SUB-GRADE</b>	
<b>A10 Earthwork</b>	
<b>A1010 Excavation and Fill</b>	
Description	Excavation, placement, and compaction of material for the purposes of modifying existing ground lines to achieve the desired elevation
Includes	Shrinkage factor for embankment, hauling material to or from the site, compaction, rock excavation
Excludes	Special or hazardous waste treatment or removal, ground improvement or reinforcement
Unit of Measure	m <sup>3</sup> [yd <sup>3</sup> ]
<b>A1020 Ditches</b>	
Description	Open drainage system that detains water as it runs off the transportation surface
Includes	Paved and unpaved ditches
Excludes	Outlets, Right-of-Way acquisitions
Unit of Measure	m <sup>3</sup> [yd <sup>3</sup> ]
<b>A1030 Water Detention / Retention</b>	
Description	Retention basins store water and collect additional storm water during periods of heavy rain. Detention basins collect storm water during periods of heavy rain but do not store water continuously.
Includes	Orifices, risers, dewatering devices
Excludes	Earthwork
Unit of Measure	m <sup>3</sup> [yd <sup>3</sup> ] or LUMP SUM
<b>A1040 Erosion Control</b>	
Description	Measures put in place to improve the long-term stability of a slope.
Includes	Soil reinforcement, slope walls
Excludes	Retaining walls
Unit of Measure	m <sup>2</sup> [ft <sup>2</sup> ]
<b>A SUB-GRADE</b>	
<b>A20 Structures</b>	
<b>A2010 Retaining Wall</b>	
Description	Allows for a significant change in ground elevation by containing the earth.
Includes	Mechanically stabilized earth walls, cast-in-place walls, modular block walls
Excludes	Temporary works such as sheet piling
Unit of Measure	m <sup>2</sup> [ft <sup>2</sup> ]
<b>A2020 Culverts</b>	
Description	Structure that permits water to flow across the line of travel and under the transportation surface.
Includes	Pipe and box culverts
Excludes	Approach ditches, soil above culvert
Unit of Measure	m [ft] or EACH
<b>B TRAVELLED WAY</b>	
<b>B10 Main</b>	
<b>B1010 Surface</b>	
Description	Part of the transportation surface in contact with the mode of transportation.
Includes	Concrete or asphalt overlay. Bituminous, concrete, or combination pavement structures. Brick, concrete block, and stone paving systems.
Excludes	Base and sub-base material.
Unit of Measure	m <sup>2</sup> [yd <sup>2</sup> ]
<b>B1020 Base</b>	
Description	Supports the pavement and provides a foundation for future maintenance.
Includes	Sub-base material, if required
Excludes	Surface pavement
Unit of Measure	m <sup>2</sup> [yd <sup>2</sup> ]
<b>B TRAVELLED WAY</b>	
<b>B20 Edge</b>	
<b>B2010 Shoulder</b>	
Description	Part of a transportation surface outside of the travelled lanes.
Includes	Concrete, asphalt, or continuously reinforced pavement, base course, and sub base within the area defined as the shoulder
Excludes	Surface, base course, and sub base supporting the travelled lanes
Unit of Measure	m <sup>2</sup> [yd <sup>2</sup> ]
<b>B2020 Multi-use Path</b>	
Description	Paved surface for pedestrian or bicycle traffic, or both.
Includes	
Excludes	Sub-grade material and placement
Unit of Measure	m <sup>2</sup> [yd <sup>2</sup> ]
<b>B2030 Curb</b>	
Description	Guides traffic and collects water for drainage.
Includes	Concrete and bituminous curb, combination curb, and gutter
Excludes	
Unit of Measure	m [ft]
<b>B2040 Barrier</b>	
Description	Structure designed to withstand forces due to crashes, separate the opposing traffic, and protect bridge structures and other elements adjacent to live traffic.
Includes	Jersey barriers, guard rail, traffic attenuators, protective shields mounted on barrier, cable barrier systems
Excludes	
Unit of Measure	m [ft]

TABLE 2 *Continued*

<b>B2050 Median</b>	
Description	Separates directions of traffic to minimize head-on collisions and control crossover locations.
Includes	Flush, raised grass, and landscaped medians
Excludes	Barriers
Unit of Measure	m [ft]
<b>C SERVICES</b>	
<b>C10 Intelligent Transportation</b>	
<b>C1010 Security / Surveillance Systems</b>	
Description	Systems that record information and alert authorities in the event of suspicious behavior.
Includes	Cameras, alarms, recording software, motion-sensing lights
Excludes	Electrical work
Unit of Measure	EACH or LUMP SUM
<b>C1020 Tolling Devices</b>	
Description	Elements involved in the collection of usage fees from the users of the transportation surface.
Includes	Open road electronic tolling systems, toll plaza equipment
Excludes	Toll booth structures (see Classification E1557)
Unit of Measure	EACH or LUMP SUM
<b>C1030 Dynamic Message Signs</b>	
Description	Signs that convey information through changeable electronic message boards.
Includes	Fabrication and installation of sign and support, and power
Excludes	Printed signs, lane utilization systems
Unit of Measure	EACH
<b>C1040 Lane Utilization Systems</b>	
Description	Systems that track traffic speed and congestion information to provide real-time information to dynamic message signs and signals, allowing for a more efficient reconfiguration of traffic.
Includes	Power
Excludes	Dynamic message signs
Unit of Measure	LUMP SUM
<b>C SERVICES</b>	
<b>C20 Utilities</b>	
<b>C2010 Power</b>	
Description	Power supply to elements within the surface transportation project, such as signals, lighting, and intelligent transportation systems.
Includes	Junction boxes, conduit, conductors, cables
Excludes	Overhead transmission lines
Unit of Measure	m [ft] or EACH
<b>C2020 Communications</b>	
Description	Communications services to elements within the surface transportation project, typically intelligent transportation services requiring remote access, such as dynamic message signs and various security systems.
Includes	Conduit, fiber, twisted copper wire
Excludes	
Unit of Measure	m [ft] or EACH
<b>C2030 Storm Sewer</b>	
Description	Closed drainage structure that conveys water from collection points to outlet points.
Includes	Pipe, joints, inlets, catch basins, manholes, trench, and backfilling
Excludes	Hazardous or special material handling
Unit of Measure	m [ft] or EACH
<b>C2040 Other Utilities</b>	
Description	Work needed to provide other utilities that are not explicitly covered within the power, communications, and storm sewer elements described previously.
Includes	Gas, electric, telephone, and other private utilities
Excludes	Power, communications, storm sewer
Unit of Measure	m [ft] or EACH
<b>D PROTECTION</b>	
<b>D10 Traffic</b>	
<b>D1010 Signs</b>	
Description	Provision of information through printed message boards.
Includes	Fabrication and installation of sign and support, foundation
Excludes	Dynamic message signs
Unit of Measure	EACH
<b>D1020 Signals</b>	
Description	Utilized to control the flow of traffic, commonly in areas of intersecting travel directions.
Includes	Power source and support
Excludes	
Unit of Measure	EACH
<b>D1030 Markings</b>	
Description	Delineate driving lanes, shoulder locations, turning lanes, and other traffic movements.
Includes	Pavement markings, reflective markers, delineators
Excludes	
Unit of Measure	m [ft] or EACH
<b>D1040 Lighting</b>	
Description	Illumination from fixtures providing vehicle traffic direction, task lighting, and vandalism discouragement.
Includes	Fabrication and installation of mast, lights, base plates, and power
Excludes	Base support (see Barriers)
Unit of Measure	EACH
