Descriptors : office machines, address plates, postal addresses, letters, specifications, dimensions.

FOREWORD

ISO (the International Organization for Standardization) is a worldwide federation of national standards institutes (ISO member bodies). The work of developing International Standards is carried out through ISO technical committees. Every member body interested in a subject for which a technical committee has been set up has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work.

Draft International Standards adopted by the technical committees are circulated to the member bodies for approval before their acceptance as International Standards by the ISO Council.

International Standard ISO 3883 was developed by Technical Committee ISO/TC 95, *Office machines*, and was circulated to the member bodies in June 1975.

It has been approved by the member bodies of the following countries :

Australia	Iran	Switzerland
Chile	Italy	Turkey
Czechoslovakia	Mexico	United Kingdom
France	Romania	U.S.S.R.
Germany	Sweden	Yugoslavia

The member body of the following country expressed disapproval of the document on technical grounds :

U.S.A.

Office machines – Line and character capacity of address masters

iTeh STANDARD PREVIEW (standards.iteh.ai)

0 INTRODUCTION

In today's technology, a number of different types of addressing systems are used which employ equipment and address masters. This International Standard is a first attempt to work towards rationalizing the existing capacity of address masters.

1 SCOPE AND FIELD OF APPLICATION

This International Standard specifies the minimum line and character capacity of address masters.

2 LINE AND CHARACTER CAPACITY OF ADDRESS MASTERS

Address masters shall have sufficient capacity to allow for not less than six lines of text at 4,233 mm (1/6 in) line pitch and not less than thirty characters per line at 2,54 mm (1/10 in) character pitch.
