

Designation: E1133 – 86 (Reapproved 2016)

Standard Practice for Performance Testing of Packaged Laboratory Apparatus for United States Government Procurements¹

This standard is issued under the fixed designation E1133; the number immediately following the designation indicates the year of original adoption or, in the case of revision, the year of last revision. A number in parentheses indicates the year of last reapproval. A superscript epsilon (ϵ) indicates an editorial change since the last revision or reapproval.

1. Scope

1.1 This practice describes the procedures for testing loaded shipping containers that would be sold to the United States government. The following tests are performed to measure the ability of the shipping container to protect the contents from the environment, shock, and vibration during wartime conditions. This practice is not intended to supplant material specifications or existing pre-shipment test procedures. The suitability of this practice for use with hazardous materials has not been determined.

1.2 The procedures covered in this practice are suitable for all types of laboratory apparatus including reusable and disposable macro and micro products.

1.3 The values stated in inch-pound units are to be regarded as standard. The values given in parentheses are mathematical conversions to SI units that are provided for information only and are not considered standard.

1.4 *This standard does not purport to address all of the safety concerns, if any, associated with its use. It is the responsibility of the user of this standard to establish appropriate safety and health practices and determine the applicability of regulatory limitations prior to use.*

2. Referenced Documents

2.1 ASTM Standards:²

D685 Practice for Conditioning Paper and Paper Products for Testing

D951 Test Method for Water Resistance of Shipping Containers by Spray Method

D1083 Test Methods for Mechanical Handling of Unitized

Loads and Large Shipping Cases and Crates (Withdrawn 2001)³

D4169 Practice for Performance Testing of Shipping Containers and Systems

D4332 Practice for Conditioning Containers, Packages, or Packaging Components for Testing

2.2 *Military Standard:*

MIL-STD-810D Environmental Test Method⁴

3. Significance and Use

3.1 The test procedure in this practice is proposed as a package performance test to be met for items shipped for United States government procurements. This practice will apply only when requested by the buyer.

4. Requirements

4.1 Three individual shipping containers, or one unit consisting of two or more overpackaged individual units are required. Each specimen shall be run through the sequence of tests, in the order given.

4.2 Condition the test specimens in accordance with Method **D685** for 72 h at 50 ± 2 % relative humidity and 23 ± 1 °C.

5. Procedure

5.1 Expose the specimens to a salt spray for 2 h in accordance with Test Method **D951**.

5.2 Drop Test Procedures:

5.2.1 Items less than 100 lb shall be drop tested in accordance with Practice **D4169** Element A, Assurance Level I, (see **Table 1**). The drop sequence shall be conducted as follows: bottom at twice specified height; bottom long edge at specified height; bottom adjacent short edge at specified height; bottom corner at specified height; bottom diagonal opposite corner at specified height; and top at specified height.

5.2.2 Items more than 100 lb (see Methods **D1083**) shall be drop tested in accordance with Practice **D4169** Element B,

¹ This practice is under the jurisdiction of ASTM Committee E41 on Laboratory Apparatus and is the direct responsibility of Subcommittee E41.01 on Laboratory Ware and Supplies.

Current edition approved Sept. 1, 2016. Published September 2016. Originally approved in 1986. Last previous edition approved in 2010 as E1133 – 86 (2010). DOI: 10.1520/E1133-86R16.
