

Designation: E1700 - 13 E1700 - 16

An American National Standard

Standard Classification for Serviceability of an Office Facility for Structure and Building Envelope^{1,2}

This standard is issued under the fixed designation E1700; the number immediately following the designation indicates the year of original adoption or, in the case of revision, the year of last revision. A number in parentheses indicates the year of last reapproval. A superscript epsilon (ε) indicates an editorial change since the last revision or reapproval.

1. Scope

- 1.1 This classification covers <u>pairs matched sets</u> of scales (see Figs. 1-624) for classifying an aspect of the serviceability of an office facility, that is, the capability of an office facility to meet certain possible requirements for structure and building envelope.
- 1.2 Within that aspect of serviceability, each pair matched set of scales (see Figs. 1-624) areis for classifying one topic of serviceability. Each topic is typically broken down into two more demand functions and supply features. Each paragraph in an Occupant Requirement Scale summarizes one level of serviceability on that topic; function, which occupants might require. The matching entry in the Facility Rating Scale is a translation of the requirement into a description of certain features of a facility which, taken in combination, indicate that the facility is likely to meet that level of required serviceability.
- 1.3 The entries in the Facility Rating Scale (see Figs. 1-624) are indicative and not comprehensive. They are for quick scanning, to estimate approximately, quickly, and economically, how well an office facility is likely to meet the needs of one or another type of occupant group, over time. The entries are not for measuring, knowing, or evaluating how an office facility is performing.
- 1.4 This classification can be used to estimate the level of serviceability of an existing facility. It can also be used to estimate the serviceability of a facility that has been planned but not yet built, such as one for which single-line drawings and outline specifications have been prepared.
- 1.5 This classification indicates what would cause a facility to be rated at a certain level of serviceability, but does not state how to conduct a serviceability rating nor how to assign a serviceability score. That information is found in Practice E1334E1679. The scales in Figs. 1-624 are complimentary to and compatible with Practice E1334E1679. Each requires the other.
- 1.6 The scales are intended to identify the levels of various requirements unique to a particular user, and the serviceability (capability) of a building to meet those requirements. The scales thus supplement rather than include code requirements. It remains the responsibility of designers, builders, and building managers to meet applicable code requirements relative to their respective roles in facility design, construction, and ongoing management.
- 1.7 The values stated in inch-pound units are to be regarded as standard. The values given in parentheses are mathematical conversions to SI units that are provided for information only and are not considered standard.

Determining What Serviceability is Provided or Proposed

2.2 ISO Documents:⁴

ISO 6240 International Standard, Performance Standards in Building—Contents and Presentation

ISO/DIS 7162 Draft International Standard, Performance Standards in Building—Contents and Format of Standards for Evaluation of Performance

ISO/DIS 7164 Draft International Standard, Performance Standards in Building—Definitions and Means of Expression for the Performance of a Whole Building

3. Terminology

- 3.1 Definitions:
- 3.1.1 *facility*, *n*—a physical setting used to serve a specific purpose.

3.1.1.1 Discussion—

A facility may be within a building, or a whole building, or a building with its site and surrounding environment; or it may be a construction that is not a building. The term encompasses both the physical object and its use.

3.1.2 facility serviceability—the capability of a facility to perform the function(s) for which it is designed, used, or required to be used.

3.1.2.1 Discussion—

The scope of this performance is of the facility as a system, including its subsystems, components, and materials and their interactions, such as acoustical, hydrothermal, air purity, and economic; and of the relative importance of each performance requirement.

- 3.1.3 office—a place, such as a room, suite, or building, in which business, clerical, or professional activities are conducted.
- 3.1.4 For standard definitions of additional terms applicable to this classification, as well as those in 3.1.1 3.1.3, see Terminology E631.

4. Significance and Use

- 4.1 Each Facility Rating Scale in this classification (see Figs. 1-624) provides a means to estimate the level of serviceability of a building or facility for one topic of serviceability, and to compare that level against the level of any other building or facility.
- 4.2 This classification can be used for comparing how well different buildings or facilities meet a particular requirement for serviceability. It is applicable despite differences such as location, structure, mechanical systems, age, and building shape.
- 4.3 This classification can be used to estimate the amount of variance of serviceability from target or from requirement, for a single office facility, or within a group of office facilities.
 - 4.4 This classification can be used to estimate the following:
 - 4.4.1 Serviceability of an existing facility for uses other than its present use.
 - 4.4.2 Serviceability (potential) of a facility that has been planned but not yet built.
 - 4.4.3 Serviceability (potential) of a facility for which a remodeling has been planned.
- 4.5 Use of this classification does not result in building evaluation or diagnosis. Building evaluation or diagnosis generally requires a special expertise in building engineering or technology, and the use of instruments, tools, or measurements.
- 4.6 This classification applies only to facilities that are building constructions, or parts thereof. (While this classification may be useful in rating the serviceability of facilities that are not building constructions, such facilities are outside the scope of this classification.)

5. Basis of Classification

- 5.1 The scales in Figs. 1-624 contain the basis for classification.
- 5.2 Instructions for use of this classification are contained in Practices Practice E1334 and E1679.

6. Keywords

6.1 basements; buildings; building envelope and structures; facility; facility occupants; functions; offices; performances; ratings; rating scales; requirements; roofs; serviceability; serviceability of; structure and building envelopes; walls (external) and

DEMAND B.1.1. Typical Office floors

Demand Scales in this Topic: B.1.1. Information on allowable loading

Subject Matter: Occupants' requirements for information on the ability of existing office floors to support special load conditions, their extent, and location.

Notes: Related occupant requirement scales for floor loading, levelness, and evenness are found in Topic A.1.5 of E1660.

From the options below, please select the level that best describes the REQUIREMENT.

Requirement Level		DEMAND	B.1.1. Information on allowable loading
	0		easy access to information, e.g. original structural drawings, is, and special engineering studies.
8	0		
7	0	Occupants require <i>easy</i> Management Plan.	access to information, e.g. essential data in an Asset
6	0		
5	0	Occupants require reaso jurisdiction having author	inable access to information, e.g. by request from the local rity.
4	0		
3	0		alt access to information, e.g. the cost, time, and effort of can rely on direct inspection.
2	0	(https://	(standards itah ai)
1	0		lifficult access to information, e.g. the cost, time, and effort of uire destructive sampling, testing, and repairs.
0	0	No requirement.	ument rieview

DEMAND B.1.2 External walls and projections

Demand Scales in this Topic:

- B.1.2.1 Permanence of exterior finishes
- B.1.2.2 Weathertightness at exterior walls
- B.1.2.3 Condition of exterior walls and projections

Subject Matter: Occupants' requirements for the physical condition of the exterior of a building, as distinct from the perceived quality of the exterior.

Notes:

- 1. Perceived quality of the exterior is dealt with in Topic A.11 Image to public and occupants of E1667.
- 2. Related occupant requirement scales for the weathertightness of exterior doors and windows and the roof are dealt with in scales B.1.3.1 and B.1.4 respectively.

From the options below, please select the level that best describes the REQUIREMENT.

Requirement Level		DEMAND B.1.2.1. Permanence of exterior finishes	
	0	The expected replacement life of exterior finishes must be greater than 75 years.	
	0	The expected replacement life of exterior finishes must be greater than 50 years up to 75 years.	
6	0		
5	0	The expected replacement life of exterior finishes should be greater than 40 years up to 50 years.	
4	0	(better as //standards itals ai)	
3	0	The expected replacement life of exterior finishes can be greater than 30 years up to 40 years.	
2	0	Document Preview	
_	0	The expected replacement life of exterior finishes does not have to exceed 30 years.	
0	0	No requirement.
