

Designation: ~~E2812–11~~ E2812 – 17

Standard Practice for Uniform Data Management in Asset Management Records Systems¹

This standard is issued under the fixed designation E2812; the number immediately following the designation indicates the year of original adoption or, in the case of revision, the year of last revision. A number in parentheses indicates the year of last reapproval. A superscript epsilon (ϵ) indicates an editorial change since the last revision or reapproval.

INTRODUCTION

Consistent asset data is a key element of any asset management records system. Standardized data in an asset management records system provides useful information for management decision support and better enables successful asset management outcomes. The management processes described in this practice will provide the basis for uniform data management.

1. Scope

1.1 This practice is intended to be used for records of all types of assets.

1.2 This practice provides guidance on establishing and maintaining uniform asset data within an asset management records system.

1.3 See ASTM [E2604](#), Standard Practice for Data Characteristics of Equipment Asset Record, for mandatory and optional data characteristics required in the creation of an asset record.

1.4 *This standard does not purport to address all of the safety concerns, if any, associated with its use. It is the responsibility of the user of this standard to establish appropriate safety and health practices and determine the applicability of regulatory limitations prior to use.*

2. Referenced Documents

2.1 *ASTM Standards:*²

3. Terminology

3.1 *Definitions*—For definitions relating to asset and asset management, refer to Terminology [E2135](#).

3.1.1 *asset identifier, n*—an alphanumeric character sequence that corresponds to a specific asset record in an asset management records system.

3.1.2 *data element, n*—an individual fact collected to populate information for the equipment record. [E2604](#)

3.1.3 *record, n*—a collection of organized information in a regular structure, usually but not necessarily in a machine-readable format accessible by a computer.

4. Significance and Use

4.1 Uniform asset management data is intended to provide a means of enabling accurate summary level information and reports to improve operational and strategic management capabilities at all phases of the asset lifecycle.

4.2 Entities should manage the asset management records system in accordance with this practice to maintain data consistency, integrity, and usability and thus achieve uniform data.

¹ This practice is under the jurisdiction of ASTM Committee [E53](#) on Asset Management and is the direct responsibility of Subcommittee [E53.02](#) on Data Management. Current edition approved July 1, 2011; Jan. 15, 2017. Published July 2011; February 2017. Originally approved in 2011. Last previous edition approved in 2011 as E2812-11.
