

Designation: **C726 – 12 C726 – 17**

Standard Specification for Mineral Wool Roof Insulation Board¹

This standard is issued under the fixed designation C726; the number immediately following the designation indicates the year of original adoption or, in the case of revision, the year of last revision. A number in parentheses indicates the year of last reappraisal. A superscript epsilon (ϵ) indicates an editorial change since the last revision or reappraisal.

This standard has been approved for use by agencies of the U.S. Department of Defense.

1. Scope

1.1 This specification covers the composition and physical properties of mineral wool insulation board used above structural roof decks in building construction. The mineral wool roof insulation acts as a base for systems such as single-ply, polymer-modified bitumen and built-up roof. This specification also covers mineral wool insulation boards that incorporate a fibrous high density upper layer on the top surface

1.2 It is possible that the use of thermal insulation materials covered by this specification will be regulated by building codes or other agencies that address fire performance, or both. The fire performance of the material needs to be addressed through standard fire test methods established by the appropriate governing documents.

1.3 The values stated in inch-pound units are to be regarded as standard. The values given in parentheses are mathematical conversions to SI units that are provided for information only and are not considered standard.

1.4 *This standard does not purport to address all of the safety concerns, if any, associated with its use. It is the responsibility of the user of this standard to establish appropriate safety and health practices and determine the applicability of the regulatory limitations prior to use.*

1.5 *This international standard was developed in accordance with internationally recognized principles on standardization established in the Decision on Principles for the Development of International Standards, Guides and Recommendations issued by the World Trade Organization Technical Barriers to Trade (TBT) Committee.*

2. Referenced Documents

2.1 The following standards, of the issue in effect on the date of material purchase, form a part of this specification to the extent specified herein:

2.3 *Other Referenced Documents:*

CAN/ULC-S102 Standard Method of Test for Surface Burning Characteristics of Building Materials and Assemblies³
EN 12430 :1998/A1 Thermal Insulating Product for Building Applications – Determination of Behaviour Under Point Load⁴
FM 4470 Approval Standard for Single-Ply, Polymer-Modified Bitumen Sheet, Built-Up Roof (BUR) and Liquid Applied Roof Assemblies for use in Class 1 and Noncombustible Roof Deck Constructions⁵
ISO 1716 :2002, Reaction-to-Fire Tests for Building Products – Determination of the Heat of Combustion⁶

3. Terminology

3.1 *Definitions:* Terms used in this specification are defined in Terminology **C168**.

3.1.1 *noncombustible core*—a fibrous roof insulation product conforming to the ash content, visible flaming and heat of combustion requirements **12.11**.

4. Classification

4.1 The thermal insulation shall be of the following types, classes and grades;

4.1.1 *Type I*—Roof insulation board comprised of a monolithic fibrous material having a fibrous high density upper surface layer and a lower density fibrous bottom layer.

4.1.1.1 *Class 1*—Minimum upper surface layer actual density of 11.2 lb/ft³ (180 kg/m³) and a minimum lower layer actual density of 7.5 lb/ft³ (120 kg/m³).

4.1.1.2 *Class 2*—Upper surface layer and lower surface layer density less than Class 1.

(1) *Grade A* – Minimum point load of 146 lbf (650 N).

(2) *Grade B* – Point load < 146 lbf (650 N).

4.1.2 *Type II*—Roof insulation board of singular density.

4.1.2.1 *Class 1*—Minimum actual density of 9 lb/ft³ (144 kg/m³).

4.1.2.2 *Class 2*—Actual density less than Class 1.

5. Ordering Information

5.1 Orders for material purchased under this specification shall include:

5.1.1 Designation of this specification,

5.1.2 Product name,

5.1.3 Board dimensions,

5.1.4 Quantity of material, and <http://standards.iteh.ai>

5.1.5 Special packaging or marking, (**14.1** and **14.2**) if required.

6. Materials and Manufacture

6.1 Mineral wool roof insulation board shall consist of mineral wool with an organic resin or other suitable binder.

6.2 For built-up roofing or polymer modified bitumen systems the board shall be faced during manufacture on one surface with a cover adequate for the application of Specification **D312** asphalt or Specification **D450** coal-tar pitch.

6.3 For single ply membrane systems the board shall be permitted to be faced or unfaced. For mechanically fastened single ply membrane systems the board shall be permitted to be faced or unfaced. For adhered single ply membrane systems the board shall be permitted to be faced during manufacture on one surface with a cover adequate for the application of the adhesive used to secure the single ply membrane.

7. Physical Properties

7.1 The average thermal resistance, *R*, of specimens sampled in accordance with Practice **C390** shall be as specified by the manufacturer.

7.2 Nominal thickness required to obtain the specified resistance or conductance shall be as stated by the manufacturer.

7.3 Roof insulation boards shall have the limiting property values shown in **Table 1**.
