

Designation: B283/B283M - 16a <u>B283/B283M - 17</u>

Standard Specification for Copper and Copper-Alloy Die Forgings (Hot-Pressed)¹

This standard is issued under the fixed designation B283/B283M; the number immediately following the designation indicates the year of original adoption or, in the case of revision, the year of last revision. A number in parentheses indicates the year of last reapproval. A superscript epsilon (ε) indicates an editorial change since the last revision or reapproval.

This standard has been approved for use by agencies of the U.S. Department of Defense.

1. Scope*

1.1 This specification establishes the requirements for copper and copper alloy die forgings produced by the hot pressing method. The following copper and copper alloys are included:

Copper or Coppe	er Alloy	
UNS No.		Name
UNS No.		Name
C11000		copper
C14500		copper-tellurium
C14700		copper-sulfur
C27450		plumbing brass
C27451		plumbing brass
C27453		copper zinc alloy
C28500		copper-zinc brass
C35330		leaded brass
C36500		leaded Muntz metal
C37000		free-cutting Muntz metal
C37700		forging brass
C46400		naval brass
C46750		tin brass
C48200		medium leaded naval brass
C48500		leaded naval brass
C48600		naval brass
C49250		copper-zinc-bismuth alloy
C49255		copper-zinc-bismuth-nickel alloy
C49260		copper-zinc-bismuth alloy
C49265		copper-zinc-tin-bismuth, low leaded
C49300		copper-zinc-tin-bismuth alloy
https://standards.iteh C49340		copper-zinc-tin-bismuth alloy
043040		copper-zinc-tin-bismuth, low leaded
C49350		copper-zinc-tin-bismuth alloy
C49355		bismuth brass
C61900		aluminum bronze
C62300		aluminum bronze, 9 %
C63000		aluminum-nickel bronze
C63200		aluminum-nickel bronze
C64200		aluminum-silicon bronze
C64210		aluminum-silicon bronze, 6.7 %
C65500		high-silicon bronze (A)
C67500		manganese bronze (A)
C67600		***
C69300		copper-zinc-silicon
C70620		copper-nickel 90-10
C71520		copper-nickel 70-30
C77400		nickel silver, 45-10
C87700		silicon bronze
C87710		silicon bronze

1.2 *Units*—The values stated in either SI units or inch-pound units are to be regarded separately as standard. The values stated in each system may not be exact equivalents; therefore, each system shall be used independently of the other. Combining values from the two systems may result in non-conformance with the standard.

¹ This specification is under the jurisdiction of ASTM Committee B05 on Copper and Copper Alloys and is the direct responsibility of Subcommittee B05.02 on Rod, Bar, Wire, Shapes and Forgings.

Current edition approved Oct. 1, 2016April 1, 2017. Published November 2016April 2017. Originally approved in 1953. Last previous edition approved in 2016 as B283/B283M—16.—16a. DOI: 10.1520/B0283_B0283M—16A.10.1520/B0283_B0283M—17.

Note 1—Nominal composition and relative forgeability ratings are given in Appendix X1. Copper-nickel alloys C70620 and C71520 are intended for welded applications with seawater exposure.

Note 2—Guidelines for design and development of forgings are included in Appendix X2.

Note 3—Wrought product intended for hot forging is described in Specification B124/B124M.

1.3 The following safety caveat pertains only to Section 10 of this specification. This standard does not purport to address all of the safety concerns, if any, associated with its use. It is the responsibility of the user of this standard to establish appropriate safety and health practices and determine the applicability of regulatory limitations prior to use.

1.4 This international standard was developed in accordance with internationally recognized principles on standardization established in the Decision on Principles for the Development of International Standards, Guides and Recommendations issued by the World Trade Organization Technical Barriers to Trade (TBT) Committee.

3. General Requirements

- 3.1 The following sections of Specification B249/B249M constitute a part of this specification:
- 3.1.1 Terminology,
- 3.1.2 Materials and Manufacture,
- 3.1.3 Workmanship, Finish, and Appearance,
- 3.1.4 Sampling,
- 3.1.5 Number of Tests and Retests,
- 3.1.6 Specimen Preparation,
- 3.1.7 Test Methods,
- 3.1.8 Significance of Numerical Limits,
- 3.1.9 Inspection,
- 3.1.10 Rejection and Rehearing,
- 3.1.11 Certification,
- 3.1.12 Test Reports,
- 3.1.13 Packaging and Package Marking, and
- 3.1.14 Supplementary Requirements.
- 3.1.15 In addition, when a section with a title identical to one of those referenced in 3.1, above, appears in this specification, it contains additional requirements that supplement those appearing in Specification B249/B249M.

4. Terminology

- 4.1 Definitions:
- 4.1.1 For definitions of terms related to copper and copper alloys, refer to Terminology B846.
- 4.2 Definitions of Terms Specific to This Standard:

² For referenced ASTM standards, visit the ASTM website, www.astm.org, or contact ASTM Customer Service at service@astm.org. For *Annual Book of ASTM Standards* volume information, refer to the standard's Document Summary page on the ASTM website.

4.2.1 hot pressed forging, n—a product made by pressing a heated blank or section of wrought or cast copper or copper alloy in a closed impression die.

5. Ordering Information

- 5.1 Include the following information when placing orders for products to this specification, as applicable:
- 5.1.1 ASTM designation and year of issue,
- 5.1.2 Copper or Copper Alloy UNS No. designation (Scope),
- 5.1.3 Drawing showing the shape dimensions and tolerances (Dimensions and Permissible Variations),
- 5.1.4 Temper (as specified herein),
- 5.1.5 Quantity: total weight or number of pieces for each form, temper, and copper or copper alloy,
- 5.1.6 When product is purchased for agencies of the U.S. government (as specified herein), and
- 5.1.7 When product must adhere to the requirements of ASME Boiler and Pressure Vessel Code (Mechanical Property Requirements).
 - 5.2 The following requirements are optional and shall be specified in the contract or purchase order.
 - 5.2.1 Certification (as specified herein and Supplementary Requirements),
 - 5.2.2 Mill test report (as specified in Specification B249/B249M), and
 - 5.2.3 Ultrasonic inspection report (Supplementary Requirements).

6. Material Materials and Manufacture

- 6.1 Materials:
- 6.1.1 The material of manufacture shall be a form of rods, billets, or blanks cut from cast or wrought material of one of the copper or copper alloys listed in the Scope of this specification and of purity and soundness as to be suitable for processing in to the products prescribed herein.
 - 6.1.2 In the event heat identification or traceability is required, the purchaser shall specify the details desired.

Note 4—Due to the discontinuous nature of the processing of castings into wrought products, it is not always practical to identify specific casting analysis with a specific quantity of finished material.

- 6.2 Manufacture:
- 6.2.1 The product shall be manufactured by hot pressing material between the upper and lower sections of a set of dies conforming to the configuration defined by the purchaser's submitted drawings.
 - 6.2.2 Product of Copper Alloy UNS No. C63000 and C63200 shall be heat treated (as specified herein).

7. Chemical Composition

- 7.1 The material shall conform to the chemical composition requirements in Table 1 for the Copper or Copper Alloy UNS No. designation specified in the ordering information.
- 7.2 These composition limits do not preclude the presence of other elements. By agreement between manufacturer and purchaser, limits may be established and analysis required for unnamed elements.
- 7.2.1 For alloys in which copper is listed as "remainder," copper is the difference between the sum of results of all elements determined and 100 %.
- 7.2.2 For alloys in which zinc is listed as "remainder," either copper or zinc may be taken as the difference between the sum of results of all other elements determined and 100 %.
- 7.3 When all elements in Table 1 are determined for Copper Alloy UNS No. C36500, C37000, C46400, C48200, C48500, C48600, the sum of results shall be 99.6 % min, for Copper Alloy UNS No. C28500, the sum of results shall be 99.1 % min, for all other alloys the sum of results shall be 99.5 % min.

8. Temper

- 8.1 The standard tempers for products described in this specification are as follows:
- 8.1.1 As hot forged-air cooled M10,
- 8.1.2 As forged-quenched M11,
- 8.1.3 Hot forged and annealed O20.
- 8.2 UNS Alloy Nos. C63000 and C63200 shall be furnished as:
- 8.2.1 Quench hardened and temper annealed, TQ50.
- 8.3 Alloys C70620 and C71520 shall be furnished in the following tempers:
- 8.3.1 As hot forged-air cooled M10, unless,
- 8.3.2 Hot forged and annealed O20 is specified.
- 8.4 Other tempers, shall be subjected to agreement between the manufacturer and the purchaser.

^A Silver counting as copper.

^B Includes oxygen-free or deoxidized grades with deoxidizers (such as phosphorus, boron, lithium, or others) in amount agreed upon.

^C This includes copper plus silver plus tellurium plus phosphorus.

^D Other deoxidizers may be used as agreed upon, in which case phosphorus need not be present.

E This includes copper plus silver plus sulfur plus phosphorus.

F Includes antimony 0.05–0.15.

^G Includes cadmium 0.001 % max.

^H Includes cadmium 0.01 max, selenium 0.02-0.07.

¹ Includes antimony 0.50 % max, and selenium 0.20 % max.

Includes antimony 0.02-0.10 %.

^KIncludes Boron 0.001 % max.

^L For boiler code application maximum iron content shall be 4.0 %. ^M Iron content shall not exceed nickel content.

^N Carbon shall be 0.05 % max.

 ${}^{O}\!\text{Antimony}$ shall be 0.10 Max.

9. Mechanical Property Requirements

- 9.1 Mechanical property requirements are subject to agreement between the manufacturer and the purchaser.
- 9.2 Product furnished to this specification for UNS Alloy No. C70620 and C71520 and specified to meet the requirements of the *ASME Boiler and Pressure Vessel Code* shall conform to the tensile requirements prescribed in Table 2, when tested in accordance with Test Methods E8/E8M.
- 9.2.1 Acceptance or rejection based upon mechanical properties for UNS Alloy No. C70620 and C71520 shall depend only on tensile strength.

10. Heat Treatment

- 10.1 Product produced from Copper Alloy UNS No. C63200 shall be heat treated as follows:
- 10.1.1 Heat to 1550°F [843°C] minimum for 1 h minimum and quench in water or other suitable medium.
- 10.1.2 Temper Anneal at $1300 \pm 25^{\circ}$ F [$704 \pm 14^{\circ}$ C] for 3 to 9 h as required to meet mechanical properties.
- 10.2 Heat treatment of other alloys, if needed, to be established by specific agreement between supplier and purchaser.
