

Designation: B 301M – 96

Standard Specification for Free-Cutting Copper Rod and Bar [Metric]

This standard is issued under the fixed designation B 301M; the number immediately following the designation indicates the year of original adoption or, in the case of revision, the year of last revision. A number in parentheses indicates the year of last reapproval. A superscript epsilon (ϵ) indicates an editorial change since the last revision or reapproval.

This specification covers seven types of free-cutting copper and rod bar.

Formerly under the jurisdiction of Committee B05 on Copper and Copper Alloys, this specification was discontinued in 1999 and replaced by Specification B 301/B 301M¹ because these standards have been combined.
