This document is not an ASTM standard and is intended only to provide the user of an ASTM standard an indication of what changes have been made to the previous version. Because it may not be technically possible to adequately depict all changes accurately, ASTM recommends that users consult prior editions as appropriate. In all cases only the current version of the standard as published by ASTM is to be considered the official document.

Designation: A227/A227M - 06 (Reapproved 2017) A227/A227M - 17

Standard Specification for Steel Wire, Cold-Drawn for Mechanical Springs¹

This standard is issued under the fixed designation A227/A227M; the number immediately following the designation indicates the year of original adoption or, in the case of revision, the year of last revision. A number in parentheses indicates the year of last reapproval. A superscript epsilon (ε) indicates an editorial change since the last revision or reapproval.

This standard has been approved for use by agencies of the U.S. Department of Defense.

1. Scope-Scope*

- 1.1 This specification covers two classes of round cold-drawn steel spring wire having properties and quality for the manufacture of mechanical springs springs, rings, and wire forms that are not subject to high stress or requiring high fatigue properties and wire forms. properties.
- 1.2 The values stated in either SI units or inch-pound units are to be regarded separately as standard. The values stated in each system may not be exact equivalents; therefore, each system shall be used independently of the other. Combining values from the two systems may result in non-conformance with the standard.
- 1.3 This international standard was developed in accordance with internationally recognized principles on standardization established in the Decision on Principles for the Development of International Standards, Guides and Recommendations issued by the World Trade Organization Technical Barriers to Trade (TBT) Committee.

3. Terminology

- 3.1 Definitions of Terms Specific to This Standard:
- 3.1.1 For definition of terms used in this specification, refer to Terminology A941.

4. Ordering Information

- 4.1 It shall be the responsibility of the purchaser to specify all requirements that are necessary for material under this specification. Such requirement may include, but are not limited to, the following:
 - 4.1.1 Quantity (mass),

¹ This specification is under the jurisdiction of ASTM Committee A01 on Steel, Stainless Steel and Related Alloys and is the direct responsibility of Subcommittee A01.03 on Steel, Rod and Wire

Current edition approved March 15, 2017Sept. 1, 2017. Published March 2017September 2017. Originally approved in 1939. Last previous edition approved in 20062017 as A227/A227M – 06 (2011). (2017). DOI: 10.1520/A0227_A0227M-06R17.10.1520/A0227_A0227M-17.

- 4.1.2 Name of material (cold-drawn steel mechanical spring wire) and class (Table 1-or Table 2),
- 4.1.3 Wire diameter ((Section Table 1 or 9 Table 2),
- 4.1.4 Packaging (Section 15),
- 4.1.5 Cast or heat analysis report, if requested (Section 6),
- 4.1.6 Certification or test report, or both, if specified (Section 14), and
- 4.1.5 ASTM designation and date of issue.

Note 1—A typical ordering description is as follows: 15 000 kg Cold-Drawn Mechanical Spring Wire, Class I, Size 5.00 mm in 700-kg coils to ASTM A227M dated_____, or for non-SI units, 30 000 lb Cold-Drawn Mechanical Spring Wire, Class I, Size 0.207 in. diameter in 500-lb coils to ASTM A227 dated_____.

- 4.2 The purchaser shall have the option to specify additional requirements, including but not limited to:
- 4.2.1 Requirements for certifications, heat analysis or test reports (see Section 14),
- 4.2.2 Special packing, marking, and loading requirements (see Section 15), and
- 4.2.3 Other special requirements, if any.

Note 1—A typical ordering description is as follows: 15 000 kg Cold-Drawn Mechanical Spring Wire, Class I, Size 5.00 mm in 700-kg coils to ASTM A227M dated______, or for non-SI units, 30 000 lb Cold-Drawn Mechanical Spring Wire, Class I, Size 0.207 in. diameter in 500-lb coils to ASTM A227 dated_____.

5. Manufacture

- 5.1 The steel may be made by any commercially accepted steel-making process. The steel may be either ingot east or strand east. rod to be used in the manufacture of wire furnished to this specification shall be in accordance with Specification A510/A510M.
 - 5.2 The finished wire shall be free of detrimental pipe and undue segregation.
 - 5.3 The wire shall be cold drawn to produce the desired mechanical properties.

6. Chemical Composition

- 6.1 The steel shall conform to the requirements for chemical composition prescribed in Table 32.
- 6.2 Cast or Heat Analysis—Each cast or heat of steel shall be analyzed by the manufacturer to determine the percentage of elements prescribed in Table 32. This analysis shall be made from a test specimen preferably taken during the pouring of the cast or heat. When requested, this shall be reported to the purchaser and shall conform to the requirements of Table 32.
- 6.3 *Product Analysis*—An analysis may be made by the purchaser from finished wire representing each cast or heat of steel. The chemical composition thus determined, as to elements required or restricted, shall conform to the product analysis requirements specified in Table 3 of Specification A510/A510M.
 - 6.4 For referee purposes, Test Methods, Practices, and Terminology A751 shall be used.

7. Mechanical Properties

- 7.1 Tension Test:
- 7.1.1 *Requirements*—The material as represented by tension test specimens shall conform to the requirements prescribed in Table 1-or Table 2.
- 7.1.2 *Number of Tests*—One test specimen shall be taken for each ten coils, or fraction thereof, in a lot. Each east or heat in a given lot shall be tested.
- 7.1.3 Location of Tests—Test specimens shall be <u>It</u> shall be permissible for test specimens to be taken from either <u>end-or both</u> ends of the coil.
 - 7.1.4 Test Method—The tension test shall be made in accordance with Test Methods and Definitions A370.
 - 7.2 Wrap Test:
- 7.2.1 Requirements—The material as represented by the wrap test specimens shall conform to the requirements specified in Table 43 or Table 5. Wrap test on wires over 8.58.0 mm or 0.312 in. in diameter is not applicable. Since the conventional methods will not accommodate over 8.58.0 mm or 0.312 in., an alternative test procedure shall be agreed upon between purchaser and producer.
- 7.2.2 *Number of Tests*—One test specimen shall be taken for each ten coils, or fraction thereof, in a lot. Each cast or heat in a given lot shall be tested.
- 7.2.3 Location of Test—Test specimens shall be It shall be permissible for test specimens to be taken from either end or both ends of the coil.
- 7.2.4 *Test Method*—The wrap test shall be made in accordance with Test Methods and Definitions A370, Supplement IV. Annex A4.
