Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

Draft International Standards adopted by the technical committees are circulated to the member bodies for voting. Publication as an International Standard requires approval by at least 75 % of the member bodies casting a vote.

International Standard ISO 4161 was prepared by Technical Committee ISO/TC 2, *Fasteners*.

This second edition cancels and replaces the first edition (ISO 4161:1983) which has been technically revised.

Annex A forms an integral part of this International Standard.

Hexagon nuts with flange — Coarse thread

1 Scope

This International Standard specifies the characteristics of hexagon nuts with flange, with metric coarse threads from M5 to M20 inclusive, of product grade A for threads up to and including M16 and product grade B for threads above M16.

If, in special cases, specifications other than those listed in this International Standard are required, they should be selected from existing International Standards, for example ISO 261, ISO 898-2, ISO 965-2, ISO 3506-2.

2 Normative references

The following standards contain provisions which, through reference in this text, constitute provisions of this International Standard. At the time of publication, the editions indicated were valid. All standards are subject to revision, and parties to agreements based on this International Standard are encouraged to investigate the possibility of applying the most recent editions of the standards indicated below. Members of IEC and ISO maintain registers of currently valid International Standards.

ISO 225:1983, *Fasteners — Bolts, screws, studs and nuts — Symbols and designations of dimensions*.

ISO 261:1998, *ISO general purpose metric screw threads — General plan*.

ISO 898-2:1992, *Mechanical properties of fasteners — Part 2: Nuts with specified proof load values — Coarse thread*.

ISO 965-2:1998, *ISO general purpose metric screw threads — Tolerances — Part 2: Limits of sizes for general purpose external and internal screw threads — Medium quality*.

ISO 3269:—¹⁾, *Fasteners — Acceptance inspection*.

ISO 3506-2:1997, *Mechanical properties of corrosion-resistant stainless-steel fasteners — Part 2: Nuts*.

ISO 4042:—²⁾, *Fasteners — Electroplated coatings*.

ISO 4759-1:—³⁾, *Tolerances for fasteners — Part 1: Bolts, screws, studs and nuts — Product grades A, B and C*.

ISO 6157-2:1995, *Fasteners — Surface discontinuities — Part 2: Nuts*.

ISO 8992:1986, *Fasteners — General requirements for bolts, screws, studs and nuts*.

¹⁾ To be published. (Revision of ISO 3269:1988)

²⁾ To be published. (Revision of ISO 4042:1989)

³⁾ To be published. (Revision of ISO 4759-1:1978)

3 Dimensions

See Figure 1 and Table 1.

Symbols and designations of dimensions are specified in ISO 225.

a m_w is the wrenching height; see note to Table 1

b $\theta = 90^\circ$ to 120°

c $\beta = 15^\circ$ to 30°

d $\delta = 15^\circ$ to 25°

e c is measured at $d_{w, \min}$

f Edge contour optional

Figure 1

Table 1 — Dimensions

Dimensions in millimetres

Thread (<i>d</i>)		M5	M6	M8	M10	M12	(M14) ^a	M16	M 20
<i>p</i> ^b		0,8	1	1,25	1,5	1,75	2	2	2,5
<i>c</i>	min.	1	1,1	1,2	1,5	1,8	2,1	2,4	3
<i>d_a</i>	min.	5,00	6,00	8,00	10,0	12	14,0	16,0	20,0
	max.	5,75	6,75	8,75	10,8	13	15,1	17,3	21,6
<i>d_c</i>	max.	11,8	14,2	17,9	21,8	26,0	29,9	34,5	42,8
<i>d_w</i>	min.	9,8	12,2	15,8	19,6	23,8	27,6	31,9	39,9
<i>e</i>	min.	8,79	11,05	14,38	16,64	20,03	23,36	26,75	32,95
<i>m</i>	max.	5,0	6,0	8,00	10,00	12,00	14,0	16,0	20,0
	min.	4,7	5,7	7,64	9,64	11,57	13,3	15,3	18,7
<i>m_w</i>	min.	2,5	3,1	4,6	5,6	6,8	7,7	8,9	10,7
<i>s</i>	max.	8,00	10,00	13,00	15,00	18,00	21,00	24,00	30,00
	min.	7,78	9,78	12,73	14,73	17,73	20,67	23,67	29,16
<i>r</i> ^c	max.	0,3	0,4	0,5	0,6	0,7	0,9	1	1,2

NOTE If the product passes the gauging given in annex A, the requirements for dimensions *e*, *c* and *m_w* are satisfied.

^a The size in parentheses should be avoided if possible.

^b *P* is the pitch of the thread.

^c Radius *r* applies both at the corners and the flats of the hexagon.

4 Requirements and reference International Standards

See table 2.

Table 2 — Requirements and reference International Standards

Material		Steel					Stainless steel
General requirements	International Standard	ISO 8992					
	Tolerance	6H					
Thread	International Standards	ISO 261, ISO 965-2					
	Property class	8		9	10	12	A2-70
Mechanical properties	Style decisive for mechanical properties ^a	$d \leq M16$ style 1	$d > M16$ style 2	style 2	style 1	style 2	
	International Standards	ISO 898-2					
Tolerances	Product grade	$d \leq M16$: A $d > M16$: B					
	International Standard	ISO 4759-1					
Finish	As processed	Requirements for electroplating are covered in ISO 4042.					Plain
		If different electroplating requirements are desired or if requirements are needed for other finishes, they shall be agreed between supplier and customer.					
Acceptability		Limits for surface discontinuities are covered in ISO 6157-2.					
		For acceptance procedure, see ISO 3269.					

^a Based on the nut height (dimension h_{\min}) nuts to this International Standard are of style 2. However, since for style 2, ISO 898-2 does not specify mechanical properties for all property classes and sizes as specified in this International Standard, in some cases nuts have to be tested according to style 1.

5 Designation

EXAMPLE

A hexagon nut with flange, with thread M12 and property class 10 is designated as follows:

Hexagon nut with flange ISO 4161 – M12 – 10
