

Designation: C889 – 18

Standard Test Methods for Chemical and Mass Spectrometric Analysis of Nuclear-Grade Gadolinium Oxide (Gd₂O₃) Powder¹

This standard is issued under the fixed designation C889; the number immediately following the designation indicates the year of original adoption or, in the case of revision, the year of last revision. A number in parentheses indicates the year of last reapproval. A superscript epsilon (ε) indicates an editorial change since the last revision or reapproval.

This standard has been approved for use by agencies of the U.S. Department of Defense.

1. Scope

1.1 These test methods cover procedures for the chemical and mass spectrometric analysis of nuclear-grade gadolinium oxide powders to determine compliance with specifications.

1.2 The analytical procedures appear in the following order:

	Sections
Carbon by Direct Combustion—Thermal Conductivity	2
C1408 Test Method for Carbon (Total) in Uranium Oxide Powders and Pellets By Direct Combustion-Infrared Detection Method	3
Total Chlorine and Fluorine by Pyrohydrolysis Ion—Selective Electrode	4
C1502 Test Method for Determination of Total Chlorine and Fluorine in Uranium Dioxide and Gadolinium Oxide	3
Loss of Weight on Ignition	8 – 14
Sulfur by Combustion—Iodometric Titration	5
Impurity Elements by a Spark-Source Mass Spectrographic Method	
C761 Test Methods for Chemical, Mass Spectrometric, Spectrochemical, Nuclear, and Radiochemical Analysis of Uranium Hexafluoride	3
C1287 Test Method for Determination of Impurities in Nuclear Grade Uranium Compounds by Inductively Coupled Plasma Mass Spectrometry	3
Gadolinium Content in Gadolinium Oxide by Impurity Correction Method	15 – 18

1.3 The values stated in SI units are to be regarded as standard. No other units of measurement are included in this standard.

1.4 *This standard does not purport to address all of the safety concerns, if any, associated with its use. It is the responsibility of the user of this standard to establish appropriate safety, health, and environmental practices and deter-*

mine the applicability of regulatory limitations prior to use. For specific hazard statements, see Section 6.

1.5 *This international standard was developed in accordance with internationally recognized principles on standardization established in the Decision on Principles for the Development of International Standards, Guides and Recommendations issued by the World Trade Organization Technical Barriers to Trade (TBT) Committee.*

2. Referenced Documents

- D1193** Specification for Reagent Water

3. Terminology

3.1 Definitions:

3.1.1 For definitions of terms relating to the nuclear fuel cycle, refer to Terminology **C859**.

4. Significance and Use

4.1 Gadolinium oxide powder is used, with subsequent processing, in nuclear fuel applications, such as an addition to uranium dioxide. These test methods are designed to determine whether the material meets the requirements described in Specification **C888**.

4.1.1 The material is analyzed to determine whether it contains the minimum gadolinium oxide content specified.

¹ These test methods are under the jurisdiction of ASTM Committee **C26** on Nuclear Fuel Cycle and are the direct responsibility of Subcommittee **C26.05** on Methods of Test.

Current edition approved Feb. 1, 2018. Published February 2018. Originally approved in 1978. Last previous edition approved in 2011 as C889 – 11. DOI: 10.1520/C0889-18.
