| 6.3.5 Use of subscriber identities.....                             | 16        |
| 6.4 DM repeater or gateway address .....                            | 17        |
| 6.4.1 Contents of DM repeater or gateway address .....              | 17        |
| 6.4.2 Use of DM repeater or gateway address .....                   | 17        |
| 6.5 TETRA Equipment Identity (TEI) .....                            | 17        |
| 6.5.1 Contents of TEI.....                                          | 17        |
| 6.5.2 Allocation principles for TEI.....                            | 17        |
| 6.6 Layer 2 addresses and labels .....                              | 18        |
| 6.6.1 DM colour code .....                                          | 18        |
| 6.7 Use of TETRA addresses .....                                    | 19        |
| 6.7.1 Air interface addressing functions .....                      | 19        |
| 6.7.2 Address placement in primitives and PDUs .....                | 19        |
| 6.7.2.1 Use of addresses at layer 2 for direct MS-MS operation..... | 19        |
| 6.7.2.2 Use of TSI at layer 3 for direct MS-MS operation.....       | 20        |
| 6.7.2.3 Use of addresses for DM repeater operation.....             | 20        |
| 6.7.2.4 Use of addresses for DM gateway operation.....              | 20        |
| 6.7.3 Address and identity comparison.....                          | 21        |
| 7 DM circuit mode teleservices and bearer services .....            | 21        |
| 8 DM intrinsic services.....                                        | 21        |
| 9 DM Short Data Service (SDS) .....                                 | 21        |
| <b>Annex A (informative): DMO reference points .....</b>            | <b>22</b> |
| A.1 Introduction .....                                              | 22        |
| A.2 Reference configuration .....                                   | 22        |
| A.2.1 Reference models .....                                        | 22        |
| A.2.1.1 Direct mode mobile station (DM-MS).....                     | 23        |
| A.2.1.2 Dual watch mobile station (DW-MS) .....                     | 23        |
| A.2.1.3 Direct mode repeater (DM-REP) .....                         | 24        |
| A.2.1.4 Direct mode gateway (DM-GATE) .....                         | 25        |

|                               |                                                           |           |
|-------------------------------|-----------------------------------------------------------|-----------|
| A.2.1.5                       | Direct mode repeater/gateway combination (DM-REP/GATE)    | 25        |
| A.3                           | TETRA DM access                                           | 26        |
| A.3.1                         | DM-MS access                                              | 26        |
| A.3.2                         | MS functional groups                                      | 26        |
| A.3.3                         | Reference points                                          | 27        |
| <b>Annex B (informative):</b> | <b>Protocol architecture for DMO</b>                      | <b>28</b> |
| B.1                           | Introduction                                              | 28        |
| B.2                           | DM-MS protocol architecture                               | 28        |
| B.2.1                         | Overview                                                  | 28        |
| B.2.2                         | Air interface layer 1                                     | 29        |
| B.2.3                         | Air interface layer 2                                     | 30        |
| B.2.4                         | Air interface layer 3                                     | 31        |
| B.2.4.1                       | Direct Mode Call Control (DMCC) entity                    | 31        |
| B.2.4.1.1                     | Intrinsic services control                                | 31        |
| B.2.4.1.2                     | Short Data Service (SDS)                                  | 31        |
| B.2.4.1.3                     | SDS-TL service                                            | 31        |
| B.2.4.2                       | DMMM entity (optional)                                    | 32        |
| B.2.5                         | Security management                                       | 32        |
| B.2.5.1                       | Identity management (authentication)                      | 32        |
| B.2.5.2                       | Key management                                            | 32        |
| <b>Annex C (informative):</b> | <b>DM circuit mode teleservices and bearer services</b>   | <b>33</b> |
| C.1                           | Service definitions                                       | 33        |
| C.1.1                         | Bearer service                                            | 33        |
| C.1.2                         | Teleservice                                               | 33        |
| C.1.3                         | Intrinsic service                                         | 33        |
| C.2                           | Services offered in TETRA DMO                             | 34        |
| C.2.1                         | Direct Mode teleservices                                  | 34        |
| C.2.1.1                       | Individual call                                           | 34        |
| C.2.1.2                       | Group call                                                | 35        |
| C.2.1.3                       | SDS based teleservices                                    | 35        |
| C.2.2                         | Direct Mode bearer services                               | 35        |
| C.2.2.1                       | Circuit mode unprotected bearer services                  | 35        |
| C.2.2.2                       | Circuit mode protected bearer services                    | 35        |
| C.2.2.3                       | Short Data Service (SDS)                                  | 35        |
| C.2.2.4                       | SDS-TL service                                            | 36        |
| C.2.3                         | Intrinsic services                                        | 37        |
| C.2.3.1                       | DM late entry                                             | 37        |
| C.2.3.2                       | Transmitting Party Number Identification (TPNI)           | 37        |
| C.2.3.3                       | Emergency calls                                           | 37        |
| <b>Annex D (normative):</b>   | <b>TETRA type approval code information element</b>       | <b>38</b> |
| D.1                           | Encoding of the TAC information element                   | 38        |
| D.2                           | Application for the TAC value                             | 38        |
| <b>Annex E (normative):</b>   | <b>TETRA final assembly code information element</b>      | <b>41</b> |
| E.1                           | Encoding of the FAC information element                   | 41        |
| E.2                           | Application for the FAC value                             | 41        |
| E.3                           | WEB page contents for FAC data base                       | 41        |
| <b>Annex F (normative):</b>   | <b>TETRA electronic serial number information element</b> | <b>44</b> |
| F.1                           | Encoding of the ESN information element                   | 44        |
| F.2                           | Usage of the ESN                                          | 44        |

|                                                        |           |
|--------------------------------------------------------|-----------|
| F.3 Usage of check sum of the equipment identity ..... | 44        |
| <b>Annex G (informative): Bibliography .....</b>       | <b>45</b> |
| History .....                                          | 46        |

# Intellectual Property Rights

IPRs essential or potentially essential to the present document may have been declared to ETSI. The information pertaining to these essential IPRs, if any, is publicly available for **ETSI members and non-members**, and can be found in ETSI SR 000 314: *"Intellectual Property Rights (IPRs); Essential, or potentially Essential, IPRs notified to ETSI in respect of ETSI standards"*, which is available from the ETSI Secretariat. Latest updates are available on the ETSI Web server (<http://ipr.etsi.org>).

Pursuant to the ETSI IPR Policy, no investigation, including IPR searches, has been carried out by ETSI. No guarantee can be given as to the existence of other IPRs not referenced in ETSI SR 000 314 (or the updates on the ETSI Web server) which are, or may be, or may become, essential to the present document.

## Foreword

This European Standard (EN) has been produced by ETSI Technical Committee Terrestrial Trunked Radio (TETRA).

The present document is part 1 of a multi-part deliverable covering the Technical requirements for Direct Mode Operation (DMO), as identified below:

**Part 1: "General network design";**

Part 2: "Radio aspects";

Part 3: "Mobile Station to Mobile Station (MS-MS) Air Interface (AI) protocol";

Part 4: "Type 1 repeater air interface";

Part 5: "Gateway air interface";

Part 6: "Security";

Part 7: "Type 2 repeater air interface"; (Historical)

Part 8: "Protocol Implementation Conformance Statement (PICS) proforma specification"; (Historical)

Part 10: "Managed Direct Mode Operation (M-DMO)". (Historical)

NOTE: Part 7, part 8 and part 10 of this multi-part deliverable are of status "historical" and will not be updated according to this version of the standard.

### National transposition dates

|                                                                                        |                   |
|----------------------------------------------------------------------------------------|-------------------|
| Date of adoption of this EN:                                                           | 22 December 2011  |
| Date of latest announcement of this EN (doa):                                          | 31 March 2012     |
| Date of latest publication of new National Standard or endorsement of this EN (dop/e): | 30 September 2012 |
| Date of withdrawal of any conflicting National Standard (dow):                         | 30 September 2012 |
