| 5.2 Equalization procedure.....                                                                                                               | 14 |
| 6 Loudspeaker Setup for Background Noise Simulation .....                                                                                     | 16 |
| 6.1 Test Room Requirements .....                                                                                                              | 16 |
| 6.2 Loudspeaker Positioning.....                                                                                                              | 17 |
| 6.3 Equalization and Calibration .....                                                                                                        | 18 |
| 6.3.1 Overview .....                                                                                                                          | 18 |
| 6.3.2 Separate equalization for each of the four loudspeakers.....                                                                            | 18 |
| 6.3.3 Separate level adjustment for each loudspeaker .....                                                                                    | 20 |
| 6.3.4 Equalization for the two left-hand and the two right-hand loudspeakers.....                                                             | 20 |
| 6.3.5 Equalization and level adjustment for the subwoofer .....                                                                               | 21 |
| 6.3.6 Delay compensation.....                                                                                                                 | 21 |
| 6.3.7 Overall equalization for all loudspeakers.....                                                                                          | 22 |
| 6.3.8 Troubleshooting failed equalizations .....                                                                                              | 23 |
| 6.3.9 Automated equalization and calibration procedure.....                                                                                   | 23 |
| 6.4 Accuracy of the reproduction arrangement .....                                                                                            | 23 |
| 6.4.0 Introduction.....                                                                                                                       | 23 |
| 6.4.1 Comparison between original sound field and simulated sound field.....                                                                  | 23 |
| 6.4.2 Displacement of the test arrangement in the simulated sound field.....                                                                  | 25 |
| 6.4.3 Transmission of background noise: Comparison of terminal performance in the original sound field<br>and the simulated sound field ..... | 27 |
| 6.5 Simulation of additional acoustic conditions.....                                                                                         | 30 |
| 7 Background Noise Simulation in cars .....                                                                                                   | 31 |
| 7.1 General setup.....                                                                                                                        | 31 |
| 7.2 Recording arrangement .....                                                                                                               | 32 |
| 7.2.0 Introduction.....                                                                                                                       | 32 |
| 7.2.1 Recording setup with the terminal's microphone .....                                                                                    | 32 |
| 7.2.2 Recording setup with a pair of cardioid microphones.....                                                                                | 33 |
| 7.3 Equalization and calibration with the terminal's microphone.....                                                                          | 33 |
| 7.3.1 Overview .....                                                                                                                          | 33 |
| 7.3.2 Separate equalization for each of the four loudspeakers.....                                                                            | 34 |

|                               |                                                                                                                                      |           |
|-------------------------------|--------------------------------------------------------------------------------------------------------------------------------------|-----------|
| 7.3.3                         | Separate level adjustment for each loudspeaker .....                                                                                 | 36        |
| 7.3.4                         | Equalization for the two front and the two rear loudspeakers.....                                                                    | 36        |
| 7.3.5                         | Equalization and level adjustment for the subwoofer .....                                                                            | 37        |
| 7.3.6                         | Delay adjustment .....                                                                                                               | 37        |
| 7.3.7                         | Overall equalization.....                                                                                                            | 38        |

# Intellectual Property Rights

## Essential patents

IPRs essential or potentially essential to normative deliverables may have been declared to ETSI. The declarations pertaining to these essential IPRs, if any, are publicly available for **ETSI members and non-members**, and can be found in ETSI SR 000 314: *"Intellectual Property Rights (IPRs); Essential, or potentially Essential, IPRs notified to ETSI in respect of ETSI standards"*, which is available from the ETSI Secretariat. Latest updates are available on the [ETSI IPR online database](https://standards.itec.ai).

Pursuant to the ETSI Directives including the ETSI IPR Policy, no investigation regarding the essentiality of IPRs, including IPR searches, has been carried out by ETSI. No guarantee can be given as to the existence of other IPRs not referenced in ETSI SR 000 314 (or the updates on the ETSI Web server) which are, or may be, or may become, essential to the present document.

## Trademarks

The present document may include trademarks and/or tradenames which are asserted and/or registered by their owners. ETSI claims no ownership of these except for any which are indicated as being the property of ETSI, and conveys no right to use or reproduce any trademark and/or tradename. Mention of those trademarks in the present document does not constitute an endorsement by ETSI of products, services or organizations associated with those trademarks.

**DECT™**, **PLUGTESTS™**, **UMTS™** and the ETSI logo are trademarks of ETSI registered for the benefit of its Members. **3GPP™**, **LTE™** and **5G™** logo are trademarks of ETSI registered for the benefit of its Members and of the 3GPP Organizational Partners. **oneM2M™** logo is a trademark of ETSI registered for the benefit of its Members and of the oneM2M Partners. **GSM®** and the GSM logo are trademarks registered and owned by the GSM Association.

# Foreword

This final draft ETSI Standard (ES) has been produced by ETSI Technical Committee Speech and multimedia Transmission Quality (STQ), and is now submitted for the ETSI Membership Approval Procedure.

The present document is part 1 of a multi-part deliverable covering Speech and multimedia Transmission Quality (STQ); Speech quality performance in the presence of background noise, as identified below:

**ETSI ES 202 396-1: "Background noise simulation technique and background noise database";**

ETSI EG 202 396-2: "Background noise transmission - Network simulation - Subjective test database and results";

ETSI EG 202 396-3: "Background noise transmission - Objective test methods".

# Modal verbs terminology

In the present document **"shall"**, **"shall not"**, **"should"**, **"should not"**, **"may"**, **"need not"**, **"will"**, **"will not"**, **"can"** and **"cannot"** are to be interpreted as described in clause 3.2 of the [ETSI Drafting Rules](#) (Verbal forms for the expression of provisions).

**"must"** and **"must not"** are **NOT** allowed in ETSI deliverables except when used in direct citation.

# Introduction

Background noise is present in most of the conversations today. Background noise may impact the speech communication performance to terminal and network equipment significantly. Therefore testing and optimization of such equipment is necessary using realistic background noises. Furthermore reproducible conditions for the tests are required which can be guaranteed only under lab type condition.

The present document addresses this issue by describing a methodology for recording and playback of background noises under well-defined and calibratable conditions in a lab-type environment. Furthermore a database with real background noises is included.

# 1 Scope

The quality of background noise transmission is an important factor, which significantly contributes to the perceived overall quality of speech. Both existing and, even more notably, the new generation of terminals, networks and system configurations, including broadband services, can be greatly improved when designed properly, with consideration and presence of background noise. The present document:

- describes a noise simulation environment using realistic background noise scenarios for laboratory use;
- contains a database including the relevant background noise samples for subjective and objective evaluation.

The present document provides information about the recording techniques needed for background noise recordings and discusses the advantages and drawbacks of existing methods. Additionally, the present document describes the requirements for laboratory conditions. The loudspeaker setup and the loudspeaker calibration and equalization procedure are described. The simulation environment specified can be used for the evaluation and optimization of terminals and of complex configurations including terminals, networks and other configurations. The main application areas should be: office, home and car environment.

The setup and database as described in the present document are applicable for:

- Objective performance evaluation of terminals in different (simulated) background noise environments.
- Speech processing evaluation by using the pre-processed speech signal in the presence of background noise, recorded by a terminal.
- Subjective evaluation of terminals by performing conversational tests, specific double talk tests or talking and listening tests in the presence of background noise.
- Subjective evaluation in third party listening tests by recording the speech samples of terminals in the presence of background noise.
