**Important notice**

The present document can be downloaded from the  
[ETSI Search & Browse Standards](#) application.

The present document may be made available in electronic versions and/or in print. The content of any electronic and/or print versions of the present document shall not be modified without the prior written authorization of ETSI. In case of any existing or perceived difference in contents between such versions and/or in print, the prevailing version of an ETSI deliverable is the one made publicly available in PDF format on [ETSI deliver](#) repository.

Users should be aware that the present document may be revised or have its status changed, this information is available in the [Milestones listing](#).

If you find errors in the present document, please send your comments to the relevant service listed under [Committee Support Staff](#).

If you find a security vulnerability in the present document, please report it through our [Coordinated Vulnerability Disclosure \(CVD\)](#) program.

---

**Notice of disclaimer & limitation of liability**

The information provided in the present deliverable is directed solely to professionals who have the appropriate degree of experience to understand and interpret its content in accordance with generally accepted engineering or other professional standard and applicable regulations.

No recommendation as to products and services or vendors is made or should be implied.

No representation or warranty is made that this deliverable is technically accurate or sufficient or conforms to any law and/or governmental rule and/or regulation and further, no representation or warranty is made of merchantability or fitness for any particular purpose or against infringement of intellectual property rights.

In no event shall ETSI be held liable for loss of profits or any other incidental or consequential damages.

Any software contained in this deliverable is provided "AS IS" with no warranties, express or implied, including but not limited to, the warranties of merchantability, fitness for a particular purpose and non-infringement of intellectual property rights and ETSI shall not be held liable in any event for any damages whatsoever (including, without limitation, damages for loss of profits, business interruption, loss of information, or any other pecuniary loss) arising out of or related to the use of or inability to use the software.

---

**Copyright Notification**

No part may be reproduced or utilized in any form or by any means, electronic or mechanical, including photocopying and microfilm except as authorized by written permission of ETSI.

The content of the PDF version shall not be modified without the written authorization of ETSI.

The copyright and the foregoing restriction extend to reproduction in all media.

# Intellectual Property Rights

## Essential patents

IPRs essential or potentially essential to normative deliverables may have been declared to ETSI. The declarations pertaining to these essential IPRs, if any, are publicly available for **ETSI members and non-members**, and can be found in ETSI SR 000 314: "*Intellectual Property Rights (IPRs); Essential, or potentially Essential, IPRs notified to ETSI in respect of ETSI standards*", which is available from the ETSI Secretariat. Latest updates are available on the [ETSI IPR online database](#).

Pursuant to the ETSI Directives including the ETSI IPR Policy, no investigation regarding the essentiality of IPRs, including IPR searches, has been carried out by ETSI. No guarantee can be given as to the existence of other IPRs not referenced in ETSI SR 000 314 (or the updates on the ETSI Web server) which are, or may be, or may become, essential to the present document.

## Trademarks

The present document may include trademarks and/or tradenames which are asserted and/or registered by their owners. ETSI claims no ownership of these except for any which are indicated as being the property of ETSI, and conveys no right to use or reproduce any trademark and/or tradename. Mention of those trademarks in the present document does not constitute an endorsement by ETSI of products, services or organizations associated with those trademarks.

**DECT™**, **PLUGTESTS™**, **UMTS™** and the ETSI logo are trademarks of ETSI registered for the benefit of its Members. **3GPP™**, **LTE™** and **5G™** logo are trademarks of ETSI registered for the benefit of its Members and of the 3GPP Organizational Partners. **oneM2M™** logo is a trademark of ETSI registered for the benefit of its Members and of the oneM2M Partners. **GSM®** and the GSM logo are trademarks registered and owned by the GSM Association.

---

# Legal Notice

This Technical Specification (TS) has been produced by ETSI 3rd Generation Partnership Project (3GPP).

The present document may refer to technical specifications or reports using their 3GPP identities. These shall be interpreted as being references to the corresponding ETSI deliverables.

The cross reference between 3GPP and ETSI identities can be found at [3GPP to ETSI numbering cross-referencing](#).

---

# Modal verbs terminology

In the present document "**shall**", "**shall not**", "**should**", "**should not**", "**may**", "**need not**", "**will**", "**will not**", "**can**" and "**cannot**" are to be interpreted as described in clause 3.2 of the [ETSI Drafting Rules](#) (Verbal forms for the expression of provisions).

"**must**" and "**must not**" are **NOT** allowed in ETSI deliverables except when used in direct citation.

# Foreword

This Technical Specification has been produced by the 3rd Generation Partnership Project (3GPP).

The contents of the present document are subject to continuing work within the TSG and may change following formal TSG approval. Should the TSG modify the contents of the present document, it will be re-released by the TSG with an identifying change of release date and an increase in version number as follows:

Version x.y.z

where:

- x the first digit:
  - 1 presented to TSG for information;
  - 2 presented to TSG for approval;
  - 3 or greater indicates TSG approved document under change control.
- y the second digit is incremented for all changes of substance, i.e. technical enhancements, corrections, updates, etc.
- z the third digit is incremented when editorial only changes have been incorporated in the document.

In the present document, modal verbs have the following meanings:

**shall** indicates a mandatory requirement to do something

**shall not** indicates an interdiction (prohibition) to do something

The constructions "shall" and "shall not" are confined to the context of normative provisions, and do not appear in Technical Reports.

The constructions "must" and "must not" are not used as substitutes for "shall" and "shall not". Their use is avoided insofar as possible, and they are not used in a normative context except in a direct citation from an external, referenced, non-3GPP document, or so as to maintain continuity of style when extending or modifying the provisions of such a referenced document.

**should** indicates a recommendation to do something

**should not** indicates a recommendation not to do something

**may** indicates permission to do something

**need not** indicates permission not to do something

The construction "may not" is ambiguous and is not used in normative elements. The unambiguous constructions "might not" or "shall not" are used instead, depending upon the meaning intended.

**can** indicates that something is possible

**cannot** indicates that something is impossible

The constructions "can" and "cannot" are not substitutes for "may" and "need not".

**will** indicates that something is certain or expected to happen as a result of action taken by an agency the behaviour of which is outside the scope of the present document

**will not** indicates that something is certain or expected not to happen as a result of action taken by an agency the behaviour of which is outside the scope of the present document

**might** indicates a likelihood that something will happen as a result of action taken by some agency the behaviour of which is outside the scope of the present document

**might not** indicates a likelihood that something will not happen as a result of action taken by some agency the behaviour of which is outside the scope of the present document

In addition:

**is** (or any other verb in the indicative mood) indicates a statement of fact

**is not** (or any other negative verb in the indicative mood) indicates a statement of fact

The constructions "is" and "is not" do not indicate requirements.

---

# 1 Scope

The present document specifies the set of stage-3 procedures, APIs, and protocols for the reference points defined in Real-Time Media Communication (RTC) architecture. While TS 26.510 defines the common set of APIs and interactions, this document refers to TS 26.510 for the general aspects and primarily deals with RTC-specific aspects to support WebRTC-based real-time media transport over 5G.

---

# 2 References

The following documents contain provisions which, through reference in this text, constitute provisions of the present document.

- References are either specific (identified by date of publication, edition number, version number, etc.) or non-specific.
- For a specific reference, subsequent revisions do not apply.
- For a non-specific reference, the latest version applies. In the case of a reference to a 3GPP document (including a GSM document), a non-specific reference implicitly refers to the latest version of that document *in the same Release as the present document*.

## 3 Definitions of terms, symbols and abbreviations

### 3.1 Terms

For the purposes of the present document, the terms given in TR 21.905 [1] and the following apply. A term defined in the present document takes precedence over the definition of the same term, if any, in TR 21.905 [1].

**RTC Application:** A Native WebRTC Application or a Web App that is compliant with the profile of a WebRTC-based application defined in the present document.

**RTC endpoint:** A WebRTC endpoint incorporating an instance of the WebRTC Framework that is capable of participating in an RTC session and which is deployed either in the RTC Access Function of a UE or in the Media Function of an RTC AS.

**RTC Client:** UE function comprising an RTC Access Function and an RTC Media Session Handler which interacts with functions in the network and UE applications.

**RTC Access Function:** A set of functions including an instance of the WebRTC Framework. The RTC Access Function exchanges real-time media with one or more RTC endpoints via reference point RTC-4m or RTC-12, and the RTC Access Function exchanges signalling messages with WebRTC Signalling Function via reference point RTC-4s. Also, the RTC Access Function exposes client APIs defined in the present document to the RTC Application at reference point RTC-7 and to the RTC Media Session Handler at reference point RTC-11.

## 3.2 Symbols

Void.

## 3.3 Abbreviations

For the purposes of the present document, the abbreviations given in TR 21.905 [1] and the following apply. An abbreviation defined in the present document takes precedence over the definition of the same abbreviation, if any, in TR 21.905 [1].

API	Application Programming Interface
AR	Augmented Reality
DTLS	Datagram Transport Layer Security
FFS	For Further Study
FoV	Field of View
HTTP	Hyper-Text Transfer Protocol
ICE	Interactive Connectivity Establishment
IMU	Inertial Measurement Unit
MNO	Mobile Network Operator
NAT	Network Address Translation
OTT	Over-The-Top
PSI	PDU Set Importance
RGB	Red-Green-Blue colour space
RTC	Real-Time Communication
RTP	Real-time Transport Protocol
RWT	Response Wait Time
SCTP	Stream Control Transmission Protocol
SRTCP	Secure Real-time Transport Control Protocol
SRTP	Secure Real-time Transport Protocol
SSE	Server-Sent Events
STUN	Session Traversal Utilities for NAT
SWAP	Simple WebRTC Application Protocol
TLS	Transport Layer Security
TURN	Traversal Using Relays around NAT
UPF	User Plane Function
WebRTC	Web Real-Time Communication
XR	Extended Reality

## 4 Procedures for real-time media communication

### 4.1 General

This clause defines all procedures for real-time media communication using the different RTC reference points. Table 4.1-1 summarises the APIs used to provision and use RTC features specified in TS 26.506 [2].

**Table 4.1-1: Summary of APIs relevant to RTC features**

RTC feature	Abstract	Relevant APIs		
		Interface	API name	Clause
Content configuration	Content delivery is configured according to Configuration Provisioning associated with a Provisioning Session.	RTC-1	Provisioning Sessions API	6.2
			Real-time Media Communication provisioning API	6.3
		RTC-5	Service Access Information API	10.2
Metrics reporting	The RTC endpoint uploads metrics reports to the RTC AF according to a provisioned Metrics Reporting Configuration it obtains from the Service Access Information for its Provisioning Session.	RTC-1	Provisioning Sessions API	6.2
			Metrics Reporting Provisioning API	6.7
		RTC-5	Service Access Information API	10.2
			Metrics Reporting API	10.5
Consumption reporting	The RTC endpoint provides feedback reports on currently consumed content according to a provisioned Consumption Reporting Configuration it obtains from the Service Access Information for its Provisioning Session.	RTC-1	Provisioning Sessions API	6.2
			Consumption Reporting Provisioning API	6.8
		RTC-5	Service Access Information API	10.2
			Consumption Reporting API	10.6
Dynamic Policy invocation	The RTC endpoint activates different traffic treatment policies selected from a set of Policy Templates configured in its Provisioning Session.	RTC-1	Provisioning Sessions API	6.2
			Policy Templates Provisioning API	6.6
		RTC-5	Service Access Information API	10.2
			Dynamic Policy API	10.3
Network Assistance	The RTC endpoint requests bit rate recommendations and delivery boosts from the RTC AF.	RTC-5	Service Access Information API	10.2
			Network Assistance API	10.4
Edge content processing	Edge resources are provisioned for processing content in RTC sessions.	RTC-1	Provisioning Sessions API	6.2
			Edge Resources Provisioning API	6.5
		RTC-5	Service Access Information API	10.2

### 4.2 Procedures for media session handling

#### 4.2.1 Provisioning (RTC-1) procedures

A RTC Application Provider may use the procedure in this clause to provision the network for RTC sessions that are operated by that RTC Application Provider. In order to configure ICE candidates, dynamic policies, and/or reporting, the RTC Application Provider shall create a new Provisioning session in the RTC AF and shall use the interactions specified in clause 5.2.2 of TS 26.510 [3] at reference point RTC-1 to create and subsequently manipulate Provisioning session in the RTC AF.

Throughout the Provisioning session established, reference point RTC-1 offers the following set of procedures:

- *Discovery of ICE candidates*: relays the configuration information for STUN, TURN, and SWAP servers in the trusted domain to RTC Media Session Handler in UE, at RTC-5, if required by the Provisioning session. The list of associated server information depends on the collaboration scenarios as identified in TS 26.506 [2].
- *Configuration of dynamic policies*: allows the configuration of Policy Templates at RTC-5 that can be applied to RTC-4m media sessions.

- *Configuration of reporting*: permits the MNO to collect, at RTC-5, QoE metrics and consumption reports about RTC-4m media sessions.

A RTC Application Provider may use any of these procedures, in any combination, to support its RTC sessions.

## 4.2.2 Network media session handling (RTC-3, RTC-5) procedures

The following operations at reference point RTC-5 are used by a RTC Media Session Handler in a UE to invoke services relating to RTC session on the RTC AF. Reference point RTC-3 may be involved to a subset of operations involved in the exchange of QoS flow information as well as QoE and consumption report.

- *Service Access Information*: It is the set of parameters and addresses needed by RTC endpoint to activate transmission and/or reception of RTC session. It additionally includes configuration information to invoke the subsequent procedures. The detailed procedure to acquire Service Access Information is specified in clause 5.3.2 of TS 26.510 [3].
- *Configuration information*: It is the set of addresses needed by RTC endpoint to acquire the service URL. It may include the addresses of trusted STUN/TURN servers as well as trusted WebRTC signalling servers that supports the SWAP protocol. If it is activated by RTC Application Provider at reference point RTC-1, RTC Media Session Handler shall use the procedures and operations specified in clause 10.3.
- *Dynamic policy invocation*: It is used by RTC Media Session Handler to manage Dynamic Policy Instance resources in the RTC AF. RTC Media Session Handler shall use the interaction specified in clause 5.3.3 of TS 26.510 [3] to instantiate Policy Template in the RTC AF that are described in the Dynamic Policies API in clause 10.4.
- *Metrics reporting*: It is used to submit a QoE metrics report to the RTC AF by RTC Media Session Handler of RTC endpoint at reference point RTC-5 or by the RTC AS at reference point RTC-3, if metrics reporting is applied for a media streaming session. To determine whether and how to send metrics reports the RTC AF, the RTC Media Session Handler shall use the procedures and operations specified in clause 5.3.5 of TS 26.510 [3].
- *Consumption reporting*: It is used to submit a consumption report to the RTC AF by the RTC Media Session Handler of the RTC endpoint at reference point RTC-5 or by the RTC AS at reference point RTC-3, if consumption reporting is applied for RTC session. This is indicated by the presence of a Client Consumption Reporting Configuration in the Service Access Information. To determine whether and how to send consumption reports to the RTC AF, the RTC Media Session Handler shall use the procedures and operations specified in clause 5.3.6 of TS 26.510 [3].
- *Network assistance*: It is used by the RTC endpoint to request Network Assistance from one of the RTC AF instances listed in the Network Assistance Configuration of the Service Access Information. To do this, the RTC Media Session Handler shall use the procedures and operations specified in clause 5.3.4 of TS 26.510 [3].

## 4.2.3 UE media session handling (RTC-6, RTC-11) procedures

The reference point RTC-6 is used to exchange the report of media consumption as configured by Service Access Information. When consumption reporting is active for a particular RTC session, the RTC Media Session Handler shall use procedures and operations specified in clause 5.4.6 of TS 26.510 [3].

The reference point RTC-11 is used to exchange the QoE metric reporting as configured by Service Access Information. When metric reporting is active for a particular RTC session, the RTC Media Session Handler shall use procedures and operations specified in clause 15.

## 4.3 Procedures for media content and signalling transport

### 4.3.1 Media transport (RTC-4m, RTC-12) procedures

#### 4.3.1.1 General

In the RTC System, real-time media shall be communicated at either reference point RTC-4m or RTC-12.

- RTC-12 shall be used for peer-to-peer communication between multiple RTC Access Functions in UEs where this is permitted by the underlying 5G System.
- RTC-4m shall be used for communication between the RTC Access Function in the UE and the RTC AS, and between multiple RTC Access Functions in UEs where peer-to-peer communication is not permitted by the underlying 5G System.

In addition, reference point RTC-4 interface may be further split into the *signalling part* (RTC-4s) and *media transport part* (RTC-4m), depending on the collaboration scenario as specified in TS 26.506 [2].

Table 4.3.1.1-1 describes the associated reference points for collaboration scenarios.

**Table 4.3.1.1-1: Associated reference point RTC-4s/4m and RTC-12 for collaboration scenarios**

Type		Collaboration scenario 1	Collaboration scenario 2	Collaboration scenario 3	Collaboration scenario 4
Media, metadata	UE-to-RTC AS	X	RTC-4m (NOTE 2)	RTC-4m	RTC-4m
	Peer-to-Peer	X	RTC-12	RTC-12	RTC-12
Signalling		X	X	RTC-4s	RTC-4s
NOTE 1: X denotes that the corresponding reference point is not the scope of the present document.					
NOTE 2: For the case when TURN server within ICE Function is involved to the other RTC endpoint.					

#### 4.3.1.2 Media transport procedures at RTC-4m and RTC-12

Under the control of an RTC Application (i.e., *Native WebRTC App* or *Web app*) the RTC Access Function sends/receives media data, application data and/or media-related metadata to/from a peer RTC endpoint at reference point RTC-4m (if its peer is the Media Function of the RTC AS) or RTC-12 (if its peer is another RTC Access Function).

In the context of the present document, neither the requirements for audio codecs and processing as defined in RFC 7874 [32] nor the requirements for video codecs and processing as defined in RFC 7742 [33] apply to RTC endpoints. The codecs that RTC endpoints are required to support are specified in clause 16.

When a Dynamic Policy Instance is operative during an RTC session, PDUs contributed by RTC endpoints on the application flow(s) described by each Application Flow Description shall comply with the media transport properties declared by that Application Flow Description, as specified in clause 10.3.

#### 4.3.2 Signalling (RTC-4s) procedures

This reference point is used for the exchange of signalling messages related to the RTC session between the RTC Application of the UE and the WebRTC Signalling Function of the RTC AS. The RTC application (i.e., *Native WebRTC App* or *Web app*) sends/receives signalling message to/from RTC AS (i.e., WebRTC Signalling Function) via reference point RTC-4s and RTC-7. Signalling procedures for RTC-4s refer to the procedure specified in the signalling protocol for RTC System in clause 13.2.

If a WebRTC Signalling Function is provided in RTC AS, an RTC Application shall configure itself to use one of the WebRTC Signalling Function servers (e.g., use the WebRTC Signalling Function server which supports the SWAP protocol listed in the *swapEndpoints* in the Service Access Information message obtained by the RTC Media Session Handler at reference point RTC-5. The configured signalling server information is sent to RTC Application via
