| 4.4 Requirements for the Interoperator IP Backbone network .....                           | 13        |
| 4.4.1 General Issues .....                                                                 | 13        |
| 4.4.2 Top level requirements .....                                                         | 13        |
| 4.4.3 IP Version Issues .....                                                              | 14        |
| 4.4.4 IP Addressing.....                                                                   | 14        |
| 4.4.5 DNS data transport.....                                                              | 14        |
| 4.4.6 DNS/ENUM client.....                                                                 | 14        |
| 4.4.7 Security Issues .....                                                                | 15        |
| 4.4.8 Quality of Service .....                                                             | 15        |
| 4.4.9 Service Related Issues .....                                                         | 15        |
| 5 DNS and ENUM for the Interoperator IP backbone network .....                             | 16        |
| 5.1 Naming and Addressing within IP Multi-media core network Sub-system (IMS).....         | 16        |
| 5.2 E.164 Number Translation (ENUM) .....                                                  | 16        |
| 5.3 Shared ENUM Infrastructure for Inter-operator IP backbone Networks.....                | 16        |
| 5.4 Non-root DNS/ENUM architecture.....                                                    | 16        |
| 6 Addressing and Routing .....                                                             | 17        |
| 6.1 User Addressing .....                                                                  | 17        |
| 6.2 Naming of home network.....                                                            | 17        |
| 7 ENUM and DNS Structure and Delegation Model .....                                        | 18        |
| 7.1 Introduction .....                                                                     | 18        |
| 7.2 Model for the Interoperator IP backbone network .....                                  | 18        |
| 7.2.1 Introduction.....                                                                    | 18        |
| 7.2.2 ENUM & DNS Architecture.....                                                         | 18        |
| 7.2.3 Example resolution .....                                                             | 19        |
| 7.2.4 Access to ENUM servers .....                                                         | 20        |
| 8 Delegation and use of domains .....                                                      | 20        |
| <b>Annex A (informative): Configuration Information for Services that Utilise DNS.....</b> | <b>22</b> |
| A.1 Introduction .....                                                                     | 22        |
| A.2 ENUM FQDN Format.....                                                                  | 22        |
| A.3 ENUM Tiers.....                                                                        | 22        |
| A.4 Technical Requirements for Interconnexion .....                                        | 23        |
| A.4.1 NAPTR formats.....                                                                   | 23        |
| A.4.2 ENUMservice field.....                                                               | 23        |
| A.4.3 URI Formats.....                                                                     | 24        |
| A.4.4 SIP server configuration .....                                                       | 24        |

|                               |                                                                           |           |
|-------------------------------|---------------------------------------------------------------------------|-----------|
| <b>Annex B (informative):</b> | <b>General Configuration Information for Providers' DNS Servers .....</b> | <b>27</b> |
| B.1                           | Introduction .....                                                        | 27        |
| B.2                           | Hardware .....                                                            | 27        |
| B.3                           | Software .....                                                            | 27        |
| B.4                           | Caching.....                                                              | 27        |
| B.5                           | Reverse Mapping.....                                                      | 27        |
| B.6                           | Use of DNS Interrogation Modes.....                                       | 28        |
| B.7                           | Use of the inter-operator IP backbone network Root DNS Server.....        | 29        |
| B.8                           | Provisioning of Communications Providers DNS servers .....                | 29        |
| <b>Annex C (informative):</b> | <b>Bibliography .....</b>                                                 | <b>30</b> |
| History .....                 |                                                                           | 31        |

## Intellectual Property Rights

IPRs essential or potentially essential to the present document may have been declared to ETSI. The information pertaining to these essential IPRs, if any, is publicly available for **ETSI members and non-members**, and can be found in ETSI SR 000 314: *"Intellectual Property Rights (IPRs); Essential, or potentially Essential, IPRs notified to ETSI in respect of ETSI standards"*, which is available from the ETSI Secretariat. Latest updates are available on the ETSI Web server (<http://ipr.etsi.org>).

Pursuant to the ETSI IPR Policy, no investigation, including IPR searches, has been carried out by ETSI. No guarantee can be given as to the existence of other IPRs not referenced in ETSI SR 000 314 (or the updates on the ETSI Web server) which are, or may be, or may become, essential to the present document.

---

## Foreword

This Technical Specification (TS) has been produced by ETSI Technical Committee Telecommunications and Internet converged Services and Protocols for Advanced Networking (TISPAN).
