

# INTERNATIONAL STANDARD

REDLINE VERSION

INTERNATIONAL SPECIAL COMMITTEE ON RADIO INTERFERENCE

**Specification for radio disturbance and immunity measuring apparatus and methods -**

**Part 1-4: Radio disturbance and immunity measuring apparatus - Antennas and test sites for radiated disturbance measurements**

CISPR 16-1-4:2025

### About the IEC

The International Electrotechnical Commission (IEC) is the leading global organization that prepares and publishes International Standards for all electrical, electronic and related technologies.

### About IEC publications

The technical content of IEC publications is kept under constant review by the IEC. Please make sure that you have the latest edition, a corrigendum or an amendment might have been published.

#### IEC publications search -

[webstore.iec.ch/advsearchform](http://webstore.iec.ch/advsearchform)

The advanced search enables to find IEC publications by a variety of criteria (reference number, text, technical committee, ...). It also gives information on projects, replaced and withdrawn publications.

#### IEC Just Published - [webstore.iec.ch/justpublished](http://webstore.iec.ch/justpublished)

Stay up to date on all new IEC publications. Just Published details all new publications released. Available online and once a month by email.

#### IEC Customer Service Centre - [webstore.iec.ch/csc](http://webstore.iec.ch/csc)

If you wish to give us your feedback on this publication or need further assistance, please contact the Customer Service Centre: [sales@iec.ch](mailto:sales@iec.ch).

#### IEC Products & Services Portal - [products.iec.ch](http://products.iec.ch)

Discover our powerful search engine and read freely all the publications previews, graphical symbols and the glossary. With a subscription you will always have access to up to date content tailored to your needs.

#### Electropedia - [www.electropedia.org](http://www.electropedia.org)

The world's leading online dictionary on electrotechnology, containing more than 22 500 terminological entries in English and French, with equivalent terms in 25 additional languages. Also known as the International Electrotechnical Vocabulary (IEV) online.

## CONTENTS

|                                                                                                                                       |    |
|---------------------------------------------------------------------------------------------------------------------------------------|----|
| FOREWORD .....                                                                                                                        | 9  |
| 1 Scope .....                                                                                                                         | 1  |
| 2 Normative references .....                                                                                                          | 11 |
| 3 Terms, definitions and abbreviated terms .....                                                                                      | 12 |
| 3.1 Terms and definitions .....                                                                                                       | 12 |
| 3.2 Abbreviated terms .....                                                                                                           | 18 |
| 4 Antennas for measurement of radiated radio disturbance .....                                                                        | 19 |
| 4.1 General .....                                                                                                                     | 19 |
| 4.2 Physical parameter (measurand) for radiated disturbance measurements .....                                                        | 19 |
| 4.3 Antennas for the frequency range 9 kHz to 150 kHz .....                                                                           | 19 |
| 4.3.1 General .....                                                                                                                   | 19 |
| 4.3.2 Magnetic field antenna .....                                                                                                    | 19 |
| 4.3.3 Shielding of loop antenna .....                                                                                                 | 21 |
| 4.4 Antennas for the frequency range 150 kHz to 30 MHz .....                                                                          | 21 |
| 4.4.1 Electric field antenna .....                                                                                                    | 21 |
| 4.4.2 Magnetic field antenna .....                                                                                                    | 21 |
| 4.4.3 Balance and electric field discrimination of antennas .....                                                                     | 21 |
| 4.5 Antennas for the frequency range 30 MHz to 1 000 MHz .....                                                                        | 22 |
| 4.5.1 General .....                                                                                                                   | 22 |
| 4.5.2 Low-uncertainty antenna for use if there is an alleged non-compliance<br>to the electric disturbance field strength limit ..... | 22 |
| 4.5.3 Antenna characteristics .....                                                                                                   | 22 |
| 4.5.4 Balance of antenna .....                                                                                                        | 24 |
| 4.5.5 Cross-polar response of antenna .....                                                                                           | 25 |
| 4.6 Antennas for the frequency range 1 GHz to 18 GHz .....                                                                            | 26 |
| 4.6.1 General .....                                                                                                                   | 26 |
| 4.6.2 Receive antenna .....                                                                                                           | 27 |
| 4.7 Special antenna arrangements – large-loop antenna system .....                                                                    | 29 |
| 5 Test sites for measurement of radio disturbance field strength for the frequency<br>range of 9 kHz to 30 MHz .....                  | 30 |
| 5.1 General .....                                                                                                                     | 30 |
| 5.2 Radio-frequency ambient environment of a test site .....                                                                          | 30 |
| 5.3 Measurement distance and test volume .....                                                                                        | 30 |
| 5.4 Set-up table and antenna positioner .....                                                                                         | 30 |
| 5.5 Validation procedure of test site .....                                                                                           | 31 |
| 5.5.1 General .....                                                                                                                   | 31 |
| 5.5.2 Normalized site insertion loss (NSIL) .....                                                                                     | 35 |
| 5.5.3 Reference site method .....                                                                                                     | 35 |
| 5.5.4 Acceptance criterion .....                                                                                                      | 36 |
| 6 Test sites for measurement of radio disturbance field strength for the frequency<br>range of 30 MHz to 1 000 MHz .....              | 36 |
| 6.1 General .....                                                                                                                     | 36 |
| 6.2 OATS .....                                                                                                                        | 37 |
| 6.2.1 General .....                                                                                                                   | 37 |
| 6.2.2 Weather-protection enclosure .....                                                                                              | 37 |
| 6.2.3 Obstruction-free area .....                                                                                                     | 37 |
| 6.2.4 Radio-frequency ambient environment of a test site .....                                                                        | 38 |

|        |                                                                                                                |    |
|--------|----------------------------------------------------------------------------------------------------------------|----|
| 6.2.5  | Ground plane.....                                                                                              | 39 |
| 6.3    | Suitability of other test sites.....                                                                           | 39 |
| 6.3.1  | Other ground-plane test sites.....                                                                             | 39 |
| 6.3.2  | Test sites without ground plane (FAR).....                                                                     | 39 |
| 6.4    | Test site validations.....                                                                                     | 40 |
| 6.4.1  | General.....                                                                                                   | 40 |
| 6.4.2  | Overview of test site validations.....                                                                         | 40 |
| 6.5    | Basic parameters of the NSA method for OATS and SAC.....                                                       | 41 |
| 6.5.1  | General equation and table of theoretical NSA values.....                                                      | 41 |
| 6.5.2  | Antenna calibration.....                                                                                       | 45 |
| 6.6    | Reference site method for OATS and SAC.....                                                                    | 45 |
| 6.6.1  | General.....                                                                                                   | 45 |
| 6.6.2  | Antennas not permitted for RSM measurements.....                                                               | 45 |
| 6.6.3  | Determination of the antenna pair reference site attenuation on a REFTS.....                                   | 46 |
| 6.6.4  | Determination of the antenna pair reference site attenuation using an averaging technique on a large OATS..... | 47 |
| 6.7    | Validation of an OATS by the NSA method.....                                                                   | 50 |
| 6.7.1  | Discrete frequency method.....                                                                                 | 50 |
| 6.7.2  | Swept frequency method.....                                                                                    | 51 |
| 6.8    | Validation of a weather-protection-enclosed OATS or a SAC.....                                                 | 52 |
| 6.9    | Possible causes for exceeding site acceptability limits.....                                                   | 55 |
| 6.10   | Site validation for FAR sites.....                                                                             | 55 |
| 6.10.1 | General.....                                                                                                   | 55 |
| 6.10.2 | RSM for FAR sites.....                                                                                         | 59 |
