About the IEC

The International Electrotechnical Commission (IEC) is the leading global organization that prepares and publishes International Standards for all electrical, electronic and related technologies.

About IEC publications

The technical content of IEC publications is kept under constant review by the IEC. Please make sure that you have the latest edition, a corrigendum or an amendment might have been published.

IEC publications search - webstore.iec.ch/advsearchform

The advanced search enables to find IEC publications by a variety of criteria (reference number, text, technical committee, ...). It also gives information on projects, replaced and withdrawn publications.

IEC Just Published - webstore.iec.ch/justpublished

Stay up to date on all new IEC publications. Just Published details all new publications released. Available online and once a month by email.

IEC Customer Service Centre - webstore.iec.ch/csc

If you wish to give us your feedback on this publication or need further assistance, please contact the Customer Service Centre: sales@iec.ch.

IEC Products & Services Portal - products.iec.ch

Discover our powerful search engine and read freely all the publications previews, graphical symbols and the glossary. With a subscription you will always have access to up to date content tailored to your needs.

Electropedia - www.electropedia.org

The world's leading online dictionary on electrotechnology, containing more than 22 500 terminological entries in English and French, with equivalent terms in 25 additional languages. Also known as the International Electrotechnical Vocabulary (IEV) online.

CONTENTS

FOREWORD.....	6
INTRODUCTION.....	8
1 Scope.....	9
2 Normative references	10
3 Terms, definitions, abbreviated terms, units and conventions	13
3.1 Terms and definitions.....	13
3.2 Abbreviated terms and units.....	15
3.3 Conventions.....	18
3.3.1 Shaft designations – examples for typical wind turbine gearbox architecture	18
4 Design process.....	20
4.1 General.....	20
4.2 Gearbox type	21
4.3 Design life, service life, and reliability	22
4.4 Component class and consequence of failure	22
4.5 Design process	22
5 Gearbox interfaces and loads	25
5.1 General.....	25
5.2 Interfaces.....	25
5.3 Loads.....	25
5.4 Drivetrain dynamics	26
5.4.1 General	26
5.4.2 Model requirements	26
5.4.3 Required analyses	27
5.4.4 Evaluation of excitability	28
5.4.5 Verification of dynamic behaviour in system environment	28
6 Design and rating requirements	29
6.1 Gears.....	29
6.1.1 Reliability considerations	29
6.1.2 Calculation of gear load capacity	29
6.1.3 Load factors	33
6.1.4 Materials	35
6.1.5 Accuracy	35
6.1.6 Manufacturing.....	35
6.2 Rolling bearings	36
6.2.1 Reliability considerations	36
6.2.2 Bearing selection	39
6.2.3 Materials	40
6.2.4 Interface requirements	40
6.2.5 Design considerations	41
6.2.6 Bearing lubrication.....	43
6.2.7 Rating calculations	44
6.3 Plain bearings	47
6.3.1 Reliability considerations	47
6.3.2 Design load cases and associated risks.....	47
6.3.3 Interface requirements	49

6.3.4	Shaft and housing fits	50
6.3.5	Hydrodynamic lubrication regime	50
6.3.6	Lubricant regime analysis	51
6.3.7	Bearing requirements	51
6.4	Shafts, keys, housing joints, splines, and fasteners	52
6.4.1	Shafts	52
6.4.2	Shaft-hub connections	53
6.4.3	Shaft seals	53
6.4.4	Fasteners	53
6.4.5	Bolted joints	54
6.4.6	Circlips	55
6.5	Structural elements	55
6.5.1	General	55
6.5.2	Interfaces, boundary conditions, and loads	56
6.6	Lubrication	56
6.6.1	General	56
6.6.2	Lubricant performance characteristics	56
6.6.3	Lubricant viscosity	56
6.6.4	Method of lubrication and cooling	57
6.6.5	Quantity of lubricant in the lubrication system	57
6.6.6	Operating temperatures	58
6.6.7	Temperature control	58
6.6.8	Lubricant condition monitoring	59
6.6.9	Lubricant filtration	59
6.6.10	Ports	60
6.6.11	Lubricant level indicator	60
6.6.12	Magnetic plugs	60
6.6.13	Breather port	60
6.6.14	Flow sensor	61
7	Design verification and design validation	61
7.1	General	61
7.2	Design verification and validation plan	61
7.3	Failure mode categorization	61
7.4	Verification methods	62
7.4.1	General	62
7.4.2	Testing	62
7.4.3	Similarity	64
7.4.4	Simulation	65
7.5	Verification and validation matrix	65
8	Manufacturing and quality assurance	69
8.1	General	69
8.2	Quality plan	69
8.2.1	General	69
8.2.2	Surface temper inspection of gears after grinding	69
8.2.3	Surface roughness inspection	69
8.3	Critical processes	69
8.4	Statistical process control	69
8.5	Factory acceptance testing	70
8.5.1	Test objectives	70

8.5.2	Acceptance test plan	70
8.5.3	Factory test sequences	70
8.5.4	Acceptance measurements	71
8.6	Non-conforming components	71
8.6.1	General	71
8.6.2	Grinding notches	72
9	Design for service and operation	72
9.1	General	72
9.2	Service and operation design requirements	72
9.3	Service and operation documentation requirements	72
9.4	Safety	73
Annex A	(informative) Examples of drivetrain interfaces and loads specifications	74
A.1	General	74
A.2	Common wind turbine drivetrain architectures	74
A.2.1	Non-integrated drivetrain with 4-point suspension	74
A.2.2	Non-integrated drivetrain with 3-point suspension	75
A.2.3	Integrated drivetrain	75
A.2.4	Interfaces	78
A.2.5	Coordinate system	78
A.2.6	Interface descriptions	78
A.2.7	Engineering data at the interface	80
A.3	Wind turbine load descriptions	80
A.3.1	Load description formats	80
A.3.2	Rainflow matrices	81
A.3.3	Load revolution distribution	82
A.3.4	Extreme load descriptions	83
A.4	Wind turbine reference power and speed	84
A.4.1	General	84
A.4.2	Wind turbine power control theory	84
A.4.3	Practicalities of power control	85
Annex B	(informative) Dynamic gearbox model verification and validation	87
B.1	General	87
B.2	Verification of drivetrain dynamics models	87
B.3	Validation of drivetrain dynamics models	87
Bibliography		90
Figure 1	– Shaft designation in 3-stage parallel shaft gearboxes	19
Figure 2	– Shaft designation in 3-stage gearboxes with one planet stage	19
Figure 3	– Shaft designation in 3-stage gearboxes with two planet stages	20
Figure 4	– Shaft designation in 4-stage gearboxes with three planet stages	20
Figure 5	– Design process flow chart	23
Figure 6	– Definition of planet gear rim thickness	31
Figure 7	– Examples of bearing selection criteria	39
Figure 8	– Notional operational conditions and plain bearing risk regions	49
Figure A.1	– Non-integrated drivetrain with 4-point suspension	74
Figure A.2	– Non-integrated drivetrain with 3-point suspension	75
Figure A.3	– Rotor-side integration with rigid main shaft connection	76

Figure A.4 – Rotor-side integration with flexible main shaft connection	76
Figure A.5 – Generator-side integration with rotor support in generator	77
Figure A.6 – Generator-side integration with rotor support in gearbox and generator	77
Figure A.7 – Generator-side integration with rotor support in gearbox	77
Figure A.8 – Example of rainflow cycles per design load case	82
Figure A.9 – Example of a load revolution distribution	83
Figure A.10 – Wind turbine power control regions	84
Figure A.11 – Ideal power and speed control strategy	85
Figure A.12 – Control strategy compared to actual response	85
Table 1 – Definition of a gearbox type	21
Table 2 – Minimum safety factors for pitting resistance and bending strength	30
Table 3 – Mesh load factor for planetary stages	33
Table 4 – Required gear accuracy	35
Table 5 – Typical temperature differences for calculation of operating clearance	42
Table 6 – Bearing lubricant temperature for calculation of viscosity ratio	44
Table 7 – Guide values for maximum contact stress	46
Table 8 – Plain bearing risks coupled to operating conditions	48
Table 9 – Minimum safety factors	52
Table 10 – Failure mode categorization	62
Table 11 – Verification and validation matrix	66
Table A.1 – Analysis information at interfaces for non-integrated drivetrains	79
Table A.2 – Analysis information at interfaces for integrated drivetrain	80
Table A.3 – Engineering data and design load descriptions	80
Table A.4 – Rainflow matrix example	81
Table A.5 – Extreme load matrix example	83
