INTRODUCTION to Amendment 1

The revision of IEC 61937-1 (2007) has become necessary to specify the additional definition of length-code. Amendment 1 contains the following significant technical changes with respect to the base publication (IEC 61937-1, second edition).

- New 8-bytes unit definition of length-code is added.
- An erratum in Clause 7 as for indication of the burst-payload type is corrected.

3.1 Definitions

Replace, in 3.1.12, the existing definition by the following:

3.1.12

length-code

code indicating the length of the data-burst-payload in bits, bytes or 8-bytes unit

6.1.6 Burst-preamble

Replace the entire existing first paragraph by the following:

The burst-preamble consists of four mandatory fields. Pa and Pb represent a synchronization word. Pc gives information about the type of data, and some information/control for the receiver. Pd gives the length of the burst-payload, limited to 65 535 bits in the case of Pd represent bits length, limited to 65 535 bytes in the case of Pd represent bytes length or limited to 524 280 bytes in the case of Pd represent 8-bytes unit length.

Replace the entire existing Table 3 by the following new Table 3:

Table 3 – Burst-preamble words

Preamble word	Length of field	Contents	Value MSB..LSB
Pa	16-bit	Sync word 1	F872h
Pb	16-bit	Sync word 2	4E1Fh
Pc	16-bit	Burst-info	Table 5
Pd	16-bit	Length-code	Number of bits, number of bytes or number of 8-bytes unit according to data-type
