Switzerland About the IEC

The International Electrotechnical Commission (IEC) is the leading global organization that prepares and publishes International Standards for all electrical, electronic and related technologies.

About IEC publications

The technical content of IEC publications is kept under constant review by the IEC. Please make sure that you have the latest edition, a corrigendum or an amendment might have been published.

IEC publications search -

webstore.iec.ch/advsearchform

The advanced search enables to find IEC publications by a variety of criteria (reference number, text, technical committee, ...). It also gives information on projects, replaced and withdrawn publications.

IEC Just Published - webstore.iec.ch/justpublished Stay up to date on all new IEC publications. Just Published details all new publications released. Available online and

details all new publications released. Available online and once a month by email.

IEC Customer Service Centre - webstore.iec.ch/csc

If you wish to give us your feedback on this publication or need further assistance, please contact the Customer Service Centre: sales@jec.ch.

IEC Products & Services Portal - products.iec.ch

Discover our powerful search engine and read freely all the publications previews, graphical symbols and the glossary. With a subscription you will always have access to up to date content tailored to your needs.

Electropedia - www.electropedia.org

The world's leading online dictionary on electrotechnology, containing more than 22 500 terminological entries in English and French, with equivalent terms in 25 additional languages. Also known as the International Electrotechnical Vocabulary (IEV) online.

Figure 23 – GMR of conductor bundles	41
Figure 24 – Terminating network for a three-phase line	42
Figure 25 – Optimum coupling arrangements and modal conversion loss $a_{\mathbf{C}}$	46
Figure 26 – Optimum phase to earth and phase to phase coupling arrangements for long lines with transpositions	47
Figure 27 – Junctions of overhead lines with power cables	
Figure 28 – Example of HV <i>H(f)</i> and <i>h(t)</i> channel response	
Figure 29 – Attenuation versus frequency of a real HV power line channel	
Figure 30 – Background noise	
Figure 31 – Background noise over frequency	
Figure 32 – Example of the background noise spectrum variations over time	
Figure 33 – Example of an isolated pulse	
Figure 34 – Example of a transient pulse	

Figure 35 – Example of net-synchronous periodic pulses	. 58
Figure 36 – Example of burst pulses	. 58
Figure 37 – Typical PLC network topologies base on APLC, DPLC or ADPLC links in HV power network	. 61
Figure 38 – Example for a signal arrangement in two 4 kHz channels	. 63
Figure 39 – Example for a DPLC channel arrangement	. 66
Figure 40 – Typical DPLC bandwidth efficiency for a BER of 10 ⁻⁶	. 68
Figure 41 – Example of the HV line voltage ranges under considered conditions	
Figure 42 – Example for DPLC system with automatic data rate adaptation	. 70
Figure 43 – Example of frequency planning based on cellular frequency channel clustering	. 72
Figure 44 – Limits for overall loss of the circuit relative to that at 1 020 Hz (ITU-T M.1020)	. 79
Figure 45 – Limits for group delay relative to the minimum measured group delay in the 500 Hz – 2 800 Hz band (ITU-T M.1020)	. 79
Figure 46 – Some theoretical BER curves	. 80
Figure 47 – DPLC "C/SNR" characteristic in comparison to the Shannon limit efficiency for BER = 1E-4 and 1E-6 and Shannon limit	. 81
Figure 48 – Ethernet standard structure of frame format	. 83
Figure 49 – Example of unavailability determination (ITU-T G.826)	. 85
Figure 50 – Example of the unavailable state of a bidirectional path (ITU-T G.826)	. 85
Figure 51 – Quality performance estimation based on ITU-T G.821 and G.826	. 85
Figure 52 – Relationship between clarity, delay, and echo with regards to speech quality	. 87
Figure A.1 – Power concepts	. 91
Figure A.2 – Single tone	. 93
Figure A.3 – Two tones	.94 8-1-2(.95
Figure A.5 – Noise equivalent band for different services	. 96
Figure B.1 – 8-PAM signal constellation	. 99
Figure B.2 – SNR gap of DPLC efficiency to Shannon limit	101
Figure B.3 – DPLC efficiency for BER = 10^{-4} and 10^{-6} and Shannon limit	102
Table 1 – Characteristics of typical DPLC modulation schemes	
Table 2 – Single- and multicarrier QAM DPLC modulation scheme characteristics	
Table 3 – Power line carrier communication techniques and frequencies	
Table 4 – HF spectrum allocated for PLC systems	
Table 5 – Range of characteristic impedances for PLC circuits on HV overhead lines Table 6 – Additional loss a_{add} [dB] for various line configurations and optimum	
Table 7 – Typical power of corona noise power levels, referring to a 4 kHz bandwidth	
for various HV system voltages	. ວວ
the coupling across 150 Ω in a bandwidth of 4 kHz	
Table 9 – Signal parameters	. 63

Table 10 – Link budget	6	4
Table 11 – Signal and allowed noise levels at the re	eceiver input6	4
Table 12 – Possible solutions for the example of Fi	gure 39 6	7
Table 13 – Main cyber security threats and security	risks related to PLC systems7	7
