About the IEC

The International Electrotechnical Commission (IEC) is the leading global organization that prepares and publishes International Standards for all electrical, electronic and related technologies.

About IEC publications

The technical content of IEC publications is kept under constant review by the IEC. Please make sure that you have the latest edition, a corrigendum or an amendment might have been published.

IEC publications search - webstore.iec.ch/advsearchform

The advanced search enables to find IEC publications by a variety of criteria (reference number, text, technical committee, ...). It also gives information on projects, replaced and withdrawn publications.

IEC Just Published - webstore.iec.ch/justpublished

Stay up to date on all new IEC publications. Just Published details all new publications released. Available online and once a month by email.

IEC Customer Service Centre - webstore.iec.ch/csc

If you wish to give us your feedback on this publication or need further assistance, please contact the Customer Service Centre: sales@iec.ch.

IEC Products & Services Portal - products.iec.ch

Discover our powerful search engine and read freely all the publications previews, graphical symbols and the glossary. With a subscription you will always have access to up to date content tailored to your needs.

Electropedia - www.electropedia.org

The world's leading online dictionary on electrotechnology, containing more than 22 500 terminological entries in English and French, with equivalent terms in 25 additional languages. Also known as the International Electrotechnical Vocabulary (IEV) online.

CONTENTS

FOREWORD	4
INTRODUCTION	6
1 Scope	7
2 Normative references	7
3 Terms, definitions, abbreviated terms and symbols	7
3.1 Terms and definitions	7
3.2 Abbreviated terms	8
3.3 Symbols	8
4 Principle	8
5 Standard measuring conditions	9
5.1 General	9
5.2 Standard measuring environmental conditions	9
5.3 Standard measuring dark-room conditions	9
5.4 Standard DUT conditions	9
5.5 Standard light measuring device (LMD) requirements	9
6 Standard measurement setup and coordinate system	10
6.1 General	10
6.2 Measurement setup	10
6.3 Measurement coordinate system	11
7 Measurement range	12
8 Measurement methods	12
8.1 General	12
8.2 Response time measurement for the motion of the first object	12
8.3 Response time measurement for the motion of the second object	14
8.4 Response envelope waveform for the first or second object	16
8.5 Response time measurement for the motion of the third object	17
8.6 Response waveform for detecting the third object intrusion	19
8.7 High-speed response time measurement	19
8.8 High-speed measurement for raster-scanning laser projection display	20
9 Report	22
Annex A (informative) Example of response waveforms	23
A.1 Example of the high-speed oscilloscope output for raster-scanning RGB laser projection display	23
A.2 Example of the high-speed oscilloscope output for a full-frame projection display	24
Annex B (informative) Example of projection patterns for measuring response time of motions	26
Annex C (informative) Examples of motion-tracking systems	27
Bibliography	29
Figure 1 – Categorization of motion	10
Figure 2 – Measurement setup	11
Figure 3 – Coordinate system related to the motion of the first and the second objects	11
Figure 4 – Coordinate system related to the third object	12
Figure 5 – Initial state before the motion of the first object	13

Figure 6 – Motion status of the first object.....	13
Figure 7 – Response detection status for the first object.....	14
Figure 8 – Initial state before the motion of the second object.....	15
Figure 9 – Motion status of the second object.....	15
Figure 10 – Response detection status for the second object.....	16
Figure 11 – Response envelope waveform displayed on oscilloscope for a small white pattern on the dark background.....	17
Figure 12 – Response envelope waveform displayed on oscilloscope for a small black pattern on the white background	17
Figure 13 – Initial state before the motion of the third object	18
Figure 14 – Motion status of the third object.....	18
Figure 15 – Response detection status for the motion of the third object	19
Figure 16 – Response waveform displayed on oscilloscope when a black third object enters the sensing range.....	19
Figure 17 – Example of high-speed oscilloscope output of a pulse train repeating with a period of the frame rate of a raster-scanning RGB laser projector	20
Figure 18 – Example of high-speed oscilloscope output for measuring the response time of a raster-scanning RGB laser projector when a small white pattern on the black background disappears by a motion and then is controlled to reappear	21
Figure 19 – Example of high-speed oscilloscope output for measuring the response time of a raster-scanning RGB laser projector when a small black pattern on the white background disappears by a motion and then is controlled to reappear	21
Figure 20 – Example of higher-speed measurement using multiple PDs for raster-scanning RGB laser projector	22
Figure A.1 – Setup for measuring the PD output signal when the combined RGB laser beams (white) is scanned across the PD.....	23
Figure A.2 – Example of high-speed oscilloscope output when a PD detected the scanning laser beams	24
Figure A.3 – Example of measured response time displayed on a high-speed oscilloscope for a raster-scanning laser projection display	24
Figure A.4 – Example of measured response waveform including the PWM pulse sequence for a full-frame projector	25
Figure B.1 – Examples of the projection patterns for measuring the response time of the motions of the first and the second objects	26
Figure C.1 – Scanning angle of the LiDAR used in Figure C.2.....	27
Figure C.2 – Example of actual photo image (a) and the LiDAR 3D image data (b).....	28
Table 1 – Letter symbols	8
