About the IEC

The International Electrotechnical Commission (IEC) is the leading global organization that prepares and publishes International Standards for all electrical, electronic and related technologies.

About IEC publications

The technical content of IEC publications is kept under constant review by the IEC. Please make sure that you have the latest edition, a corrigendum or an amendment might have been published.

IEC publications search -

webstore.iec.ch/advsearchform

The advanced search enables to find IEC publications by a variety of criteria (reference number, text, technical committee, ...). It also gives information on projects, replaced and withdrawn publications.

IEC Just Published - webstore.iec.ch/justpublished

Stay up to date on all new IEC publications. Just Published details all new publications released. Available online and once a month by email.

IEC Customer Service Centre - webstore.iec.ch/csc

If you wish to give us your feedback on this publication or need further assistance, please contact the Customer Service Centre: sales@iec.ch.

IEC Products & Services Portal - products.iec.ch

Discover our powerful search engine and read freely all the publications previews, graphical symbols and the glossary. With a subscription you will always have access to up to date content tailored to your needs.

Electropedia - www.electropedia.org

The world's leading online dictionary on electrotechnology, containing more than 22 500 terminological entries in English and French, with equivalent terms in 25 additional languages. Also known as the International Electrotechnical Vocabulary (IEV) online.

CONTENTS

FOREWORD	4
INTRODUCTION	6
1 Scope	7
2 Normative references	7
3 Terms and definitions	7
4 State of the art	9
4.1 Today's structures for power supply	9
4.2 Auxiliary energy	9
5 Domain description and analysis	10
5.1 General	10
5.2 Typical drivers	11
6 Description of system architectures	12
6.1 System architectures (Stage 2 – System Architecting)	12
6.2 Technical challenges to overcome	13
7 Use cases (Stage 3 – Use Case Analysis)	13
7.1 General	13
7.2 Use case description of braking energy recuperation	13
7.2.1 General	13
7.2.2 Author information	15
7.2.3 Scope and objectives of use cases	15
7.2.4 Narrative of use cases	16
7.2.5 Diagrams of use cases	17
7.2.6 Use case conditions	18
7.2.7 Commercialization rate and prevalence of use case	18
7.2.8 Information of regulatory and standardization issues	18
7.2.9 Actors	19
7.2.10 Actors and their roles in the use case	19
7.2.11 Overview of scenarios	20
7.2.12 Further information	20
7.2.13 Custom terminology, definitions and information	20
7.2.14 References	21
8 Aspects of DC systems for industrial usage (Stage 4 – System Modelling)	21
8.1 Preconditions necessary to connect to a DC system	21
8.2 Risks specific to direct current	21
8.3 Topologies for DC grids	22
8.4 Network and earthing configuration	22
8.5 Electromagnetic compatibility (EMC)	23
8.6 Grid behaviour	23
8.6.1 Voltage bands	23
8.6.2 Pre-charging	23
8.6.3 Short-circuit behaviour	23
8.6.4 Grid management or power flow control	24
8.7 System stability	24
8.8 Protection for safety	24
8.8.1 General	24
8.8.2 Overcurrent	25

8.8.3	Protection against transient overvoltages	25
8.8.4	Arc faults	25
8.8.5	Protection against voltages during maintenance.....	26
8.8.6	Corrosion protection.....	26
8.8.7	Insulation coordination	27
8.8.8	Protection against electric shock	27
9	Standard analysis (Stage 5 – Standards Analysis)	27
9.1	Survey of existing standards.....	27
10	Gap analysis (Stage 6 – Gap Analysis)	27
10.1	Survey of additional standardization needs.....	27
10.2	Mapping of aspects to standardization needs.....	28
Annex A	(informative) Industrial examples.....	29
A.1	DC-INDUSTRIE project in Germany.....	29
A.1.1	General.....	29
A.1.2	Voltage bands	29
A.1.3	Operating statuses as function of voltage and time	30
A.1.4	Droop curves.....	32
A.2	Comparison of earthing concepts	33
A.2.1	Earthing via the AC grid.....	33
A.2.2	DC IT system without continued operation (DC IT system)	34
A.2.3	DC mid-point earthing.....	37
Bibliography	38
Figure 1	– Variants for auxiliary power supply [3].....	10
Figure 2	– SGAM framework.....	11
Figure 3	– Overview of an industrial DC system.....	12
Figure 4	– IEC SRD 63200 descriptions of domains and zones as well as layers.....	14
Figure 5	– Relevant stability considerations.....	24
Figure A.1	– Operating ranges of the components of the DC system.....	30
Figure A.2	– Exemplary droop curves of different power sources with active voltage control.....	32
Figure A.3	– Definition of direction of voltage u_{DC} and current i_{DC}	32
Figure A.4	– DC IT system with producers, storage units and loads [3]	35
Figure A.5	– Active balancing in the DC-IT grid [3].....	36
Table 1	– Use case identification.....	14
Table 2	– Information of contributing author(s) and versions of the descriptions.....	15
Table 3	– Use case 001 Recuperation of braking energy	15
Table 4	– Narrative of use case	16
Table 5	– Diagram(s) of use case.....	17
Table 6	– Use case conditions	18
Table 7	– Commercialization rate and prevalence of use case.....	18
Table 8	– Information of regulatory and standardization issues.....	18
Table 9	– Actor grouping	19
Table 10	– Actors and their roles in the use case.....	19

Table 11 – Overview of scenarios	20
Table 12 – Further information for classification and interconnections mapping.....	20
Table 13 – Custom terminology, definitions and information(*)	20
Table 14 – References	21
Table A.1 – Operating status as a function of voltage and time.....	31

INTERNATIONAL ELECTROTECHNICAL COMMISSION

Low-voltage direct current (LVDC) industry applications**FOREWORD**

- 1) The International Electrotechnical Commission (IEC) is a worldwide organization for standardization comprising all national electrotechnical committees (IEC National Committees). The object of IEC is to promote international co-operation on all questions concerning standardization in the electrical and electronic fields. To this end and in addition to other activities, IEC publishes International Standards, Technical Specifications, Technical Reports, Publicly Available Specifications (PAS) and Guides (hereafter referred to as "IEC Publication(s)"). Their preparation is entrusted to technical committees; any IEC National Committee interested in the subject dealt with may participate in this preparatory work. International, governmental and non-governmental organizations liaising with the IEC also participate in this preparation. IEC collaborates closely with the International Organization for Standardization (ISO) in accordance with conditions determined by agreement between the two organizations.
- 2) The formal decisions or agreements of IEC on technical matters express, as nearly as possible, an international consensus of opinion on the relevant subjects since each technical committee has representation from all interested IEC National Committees.
- 3) IEC Publications have the form of recommendations for international use and are accepted by IEC National Committees in that sense. While all reasonable efforts are made to ensure that the technical content of IEC Publications is accurate, IEC cannot be held responsible for the way in which they are used or for any misinterpretation by any end user.
- 4) In order to promote international uniformity, IEC National Committees undertake to apply IEC Publications transparently to the maximum extent possible in their national and regional publications. Any divergence between any IEC Publication and the corresponding national or regional publication shall be clearly indicated in the latter.
- 5) IEC itself does not provide any attestation of conformity. Independent certification bodies provide conformity assessment services and, in some areas, access to IEC marks of conformity. IEC is not responsible for any services carried out by independent certification bodies.
- 6) All users should ensure that they have the latest edition of this publication.
- 7) No liability shall attach to IEC or its directors, employees, servants or agents including individual experts and members of its technical committees and IEC National Committees for any personal injury, property damage or other damage of any nature whatsoever, whether direct or indirect, or for costs (including legal fees) and expenses arising out of the publication, use of, or reliance upon, this IEC Publication or any other IEC Publications.
- 8) Attention is drawn to the Normative references cited in this publication. Use of the referenced publications is indispensable for the correct application of this publication.
- 9) IEC draws attention to the possibility that the implementation of this document may involve the use of (a) patent(s). IEC takes no position concerning the evidence, validity or applicability of any claimed patent rights in respect thereof. As of the date of publication of this document, IEC had not received notice of (a) patent(s), which may be required to implement this document. However, implementers are cautioned that this may not represent the latest information, which may be obtained from the patent database available at <https://patents.iec.ch>. IEC shall not be held responsible for identifying any or all such patent rights.

IEC SRD 63317 has been prepared by IEC systems committee LVDC: Low Voltage Direct Current and Low Voltage Direct Current for Electricity Access. It is a Systems Reference Deliverable.

The text of this Systems Reference Deliverable is based on the following documents:

Draft	Report on voting
SyCLVDC/174/DTS	SyCLVDC/182/RVDTS

Full information on the voting for its approval can be found in the report on voting indicated in the above table.

The language used for the development of this Systems Reference Deliverable is English.
