About the IEC

The International Electrotechnical Commission (IEC) is the leading global organization that prepares and publishes International Standards for all electrical, electronic and related technologies.

About IEC publications

The technical content of IEC publications is kept under constant review by the IEC. Please make sure that you have the latest edition, a corrigendum or an amendment might have been published.

IEC publications search -

webstore.iec.ch/advsearchform

The advanced search enables to find IEC publications by a variety of criteria (reference number, text, technical committee, ...). It also gives information on projects, replaced and withdrawn publications.

IEC Just Published - webstore.iec.ch/justpublished

Stay up to date on all new IEC publications. Just Published details all new publications released. Available online and once a month by email.

IEC Customer Service Centre - webstore.iec.ch/csc

If you wish to give us your feedback on this publication or need further assistance, please contact the Customer Service Centre: sales@iec.ch.

IEC Products & Services Portal - products.iec.ch

Discover our powerful search engine and read freely all the publications previews, graphical symbols and the glossary. With a subscription you will always have access to up to date content tailored to your needs.

Electropedia - www.electropedia.org

The world's leading online dictionary on electrotechnology, containing more than 22 500 terminological entries in English and French, with equivalent terms in 25 additional languages. Also known as the International Electrotechnical Vocabulary (IEV) online.

CONTENTS

FOREWORD	4
INTRODUCTION	6
1 Scope	7
2 Normative references	7
3 Terms, definitions, symbols and abbreviated terms	7
3.1 Terms and definitions	8
3.2 Symbols and abbreviated terms	8
3.2.1 Symbols	8
3.2.2 Abbreviated terms	10
4 Personnel safety	10
5 Experience level required	10
6 Measurement techniques for ESD risk assessment	11
7 ESD robustness of ESDS used in processes	13
7.1 General considerations	13
7.2 ESD withstand currents of single devices (components)	13
7.2.1 Human body model	13
7.2.2 Discharge of charged conductors	14
7.2.3 Charged device model	14
7.3 ESD withstand currents of electronic assemblies	16
7.3.1 Discharge of charged personnel	16
7.3.2 Discharge of charged conductors	16
7.3.3 Discharge of boards/systems	16
7.4 Voltage sensitive devices	17
8 ESD risk assessment flows	17
8.1 General considerations	17
8.2 Manual handling steps	18
8.2.1 General considerations	18
8.2.2 Parameter limits for ESD risk assessment in manual handling steps	18
8.2.3 Detailed ESD risk assessment flow	19
8.3 Conductors	21
8.3.1 General considerations	21
8.3.2 Parameter limits for ESD risk assessment of conductors	22
8.3.3 Detailed ESD risk assessment flow	22
8.4 Charged ESDS	24
8.4.1 General considerations	24
8.4.2 Parameter limits for ESD risk assessment of charged ESDS	24
8.4.3 Detailed ESD risk assessment flow	25
8.5 Risks due to process essential insulators	27
8.5.1 General considerations	27
8.5.2 Parameter limits for ESD risk assessment of process essential insulators	27
8.5.3 Detailed ESD risk assessment flow	28
8.6 ESD risk assessment by ESD event detection	30
8.6.1 General considerations	30
8.6.2 General procedure	31
8.6.3 Detailed ESD risk assessment flow	31

Annex A (informative) Measurement techniques and equipment.....	33
A.1 General considerations	33
A.2 Measurements of grounding	33
A.2.1 Resistance measurement apparatus	33
A.2.2 Low resistance meter (DC ohmmeter, multimeter).....	35
A.2.3 AC voltage check.....	36
A.3 Measurements of contact resistance	37
A.3.1 Background information and application to ESD risk assessment.....	37
A.3.2 Surface, point to point or volume resistance measurements at 10 V and 100 V.....	37
A.3.3 Surface, point to point or volume resistance measurements at voltages greater than 100 V.....	38
A.3.4 Determination of contact resistance under ESD conditions	39
A.4 Measurements of electrostatic fields	41
A.4.1 General considerations	41
A.4.2 Electrostatic field meter	41
A.5 Measurements of charges	42
A.5.1 General considerations	42
A.5.2 Faraday pail	43
A.5.3 Electrometer	43
A.5.4 Current probe or CDM discharge head or Pellegrini target	44
A.6 Measurements of electrostatic voltages	44
A.6.1 Charged plate monitor	44
A.6.2 Walking test kit.....	45
A.6.3 Non-contacting electrostatic voltmeter (ESVM)	46
A.6.4 Contact voltmeter	47
A.7 Measurements of discharge events.....	48
A.7.1 Antenna with oscilloscope	48
A.7.2 ESD event detectors	50
A.8 Measurements of discharge currents	50
A.8.1 General considerations	50
A.8.2 Current probe	51
A.8.3 Pellegrini target	53
A.8.4 CDM test head.....	54
Annex B (informative) Grounding of automated handling equipment (AHE)	56
B.1 Background information	56
B.2 Test equipment	56
B.3 Test procedure.....	57
B.4 Suggested equipment grounding guidelines	57
Annex C (informative) Preparation: What is necessary to prepare an effective ESD risk assessment?	59
C.1 Best practices	59
C.2 Measurement of temperature, humidity and basic electrostatic conditions	59
C.3 Further hints for preparation	59
Annex D (informative) ESD risk assessment and mitigation	60
Annex E (informative) Examples for defining limits in ESD risk assessment for risks due to charged personnel	61
Annex F (informative) Example for ESD risk assessment in a "pick and place" process	63

F.1	Process description	63
F.2	Parameter limits and equipment	64
F.3	ESD risk assessment of "Pick operation"	64
	Bibliography	66
Figure 1	– Direct (best correlation) and indirect (least correlation) measurements to assess an ESD risk	12
Figure 2	– Flow to assess ESD risk induced by personnel	21
Figure 3	– Flow to assess the ESD risk induced by conductors	24
Figure 4	– Flow to assess the ESD risk induced by charged ESDS	26
Figure 5	– Flow to assess the ESD risk induced by process essential insulators	30
Figure 6	– Flow to assess the ESD risk by detecting the electromagnetic radiation using ESD event detectors or antennas and oscilloscopes	32
Figure A.1	– Circuit diagram of experiments and simulations of contact resistance	39
Figure A.2	– Examples of current probes	52
Figure A.3	– Example of a 4-GHz Pellegrini target	53
Figure A.4	– Commercially available CDM test head used for discharge current measurements	54
Figure E.1	– Discharge current measured in the field and during device qualification [17]	61
Figure F.1	– Schematic representation of a "pick and place" operation with two handlers	63
Table 1	– Resistance ranges of materials used in this document	11
Table 2	– Overview of possible instruments used for different scenarios to assess ESD risk	12
Table A.1	– Peak current ranges of CDM discharges of small and large verification modules for oscilloscopes with a bandwidth of 1 GHz and 6 GHz according to ANSI/ESDA/JEDEC JS-002-2022 [28]	55

INTERNATIONAL ELECTROTECHNICAL COMMISSION

Electrostatics -**Part 5-6: Protection of electronic devices from electrostatic phenomena –
Process assessment techniques****FOREWORD**

- 1) The International Electrotechnical Commission (IEC) is a worldwide organization for standardization comprising all national electrotechnical committees (IEC National Committees). The object of IEC is to promote international co-operation on all questions concerning standardization in the electrical and electronic fields. To this end and in addition to other activities, IEC publishes International Standards, Technical Specifications, Technical Reports, Publicly Available Specifications (PAS) and Guides (hereafter referred to as "IEC Publication(s)"). Their preparation is entrusted to technical committees; any IEC National Committee interested in the subject dealt with may participate in this preparatory work. International, governmental and non-governmental organizations liaising with the IEC also participate in this preparation. IEC collaborates closely with the International Organization for Standardization (ISO) in accordance with conditions determined by agreement between the two organizations.
- 2) The formal decisions or agreements of IEC on technical matters express, as nearly as possible, an international consensus of opinion on the relevant subjects since each technical committee has representation from all interested IEC National Committees.
- 3) IEC Publications have the form of recommendations for international use and are accepted by IEC National Committees in that sense. While all reasonable efforts are made to ensure that the technical content of IEC Publications is accurate, IEC cannot be held responsible for the way in which they are used or for any misinterpretation by any end user.
- 4) In order to promote international uniformity, IEC National Committees undertake to apply IEC Publications transparently to the maximum extent possible in their national and regional publications. Any divergence between any IEC Publication and the corresponding national or regional publication shall be clearly indicated in the latter.
- 5) IEC itself does not provide any attestation of conformity. Independent certification bodies provide conformity assessment services and, in some areas, access to IEC marks of conformity. IEC is not responsible for any services carried out by independent certification bodies.
- 6) All users should ensure that they have the latest edition of this publication.
- 7) No liability shall attach to IEC or its directors, employees, servants or agents including individual experts and members of its technical committees and IEC National Committees for any personal injury, property damage or other damage of any nature whatsoever, whether direct or indirect, or for costs (including legal fees) and expenses arising out of the publication, use of, or reliance upon, this IEC Publication or any other IEC Publications.
- 8) Attention is drawn to the Normative references cited in this publication. Use of the referenced publications is indispensable for the correct application of this publication.
- 9) IEC draws attention to the possibility that the implementation of this document may involve the use of (a) patent(s). IEC takes no position concerning the evidence, validity or applicability of any claimed patent rights in respect thereof. As of the date of publication of this document, IEC had not received notice of (a) patent(s), which may be required to implement this document. However, implementers are cautioned that this may not represent the latest information, which may be obtained from the patent database available at <https://patents.iec.ch>. IEC shall not be held responsible for identifying any or all such patent rights.

IEC TS 61340-5-6 has been prepared by IEC technical committee 101: Electrostatics. It is a Technical Specification.

This Technical Specification cancels and replaces IEC PAS 61340-5-6 published in 2022. This first edition constitutes a technical revision.

The text of this Technical Specification is based on the following documents:

Draft	Report on voting
101/734/DTS	101/741/RVDTS

Full information on the voting for its approval can be found in the report on voting indicated in the above table.

The language used for the development of this Technical Specification is English.

This document was drafted in accordance with ISO/IEC Directives, Part 2, and developed in accordance with ISO/IEC Directives, Part 1 and ISO/IEC Directives, IEC Supplement, available at www.iec.ch/members_experts/refdocs. The main document types developed by IEC are described in greater detail at www.iec.ch/publications.

A list of all parts in the IEC 61340 series, published under the general title *Electrostatics*, can be found on the IEC website.

The committee has decided that the contents of this document will remain unchanged until the stability date indicated on the IEC website under webstore.iec.ch in the data related to the specific document. At this date, the document will be

- reconfirmed,
- withdrawn, or
- revised.
