About the IEC

The International Electrotechnical Commission (IEC) is the leading global organization that prepares and publishes International Standards for all electrical, electronic and related technologies.

About IEC publications

The technical content of IEC publications is kept under constant review by the IEC. Please make sure that you have the latest edition, a corrigendum or an amendment might have been published.

IEC publications search -

webstore.iec.ch/advsearchform

The advanced search enables to find IEC publications by a variety of criteria (reference number, text, technical committee, ...). It also gives information on projects, replaced and withdrawn publications.

IEC Just Published - webstore.iec.ch/justpublished

Stay up to date on all new IEC publications. Just Published details all new publications released. Available online and once a month by email.

IEC Customer Service Centre - webstore.iec.ch/csc

If you wish to give us your feedback on this publication or need further assistance, please contact the Customer Service Centre: sales@iec.ch.

IEC Products & Services Portal - products.iec.ch

Discover our powerful search engine and read freely all the publications previews, graphical symbols and the glossary. With a subscription you will always have access to up to date content tailored to your needs.

Electropedia - www.electropedia.org

The world's leading online dictionary on electrotechnology, containing more than 22 500 terminological entries in English and French, with equivalent terms in 25 additional languages. Also known as the International Electrotechnical Vocabulary (IEV) online.

CONTENTS

FOREWORD.....	5
1 Scope.....	7
2 Normative references.....	7
3 Terms, definitions, symbols and abbreviated terms	8
3.1 Terms and definitions.....	8
3.2 Symbols and abbreviated terms	16
3.2.1 Symbols.....	16
3.2.2 Abbreviated terms.....	17
4 Overview	18
4.1 General	18
4.2 Measurement methodology overview	19
4.3 Document overview.....	19
5 System requirements	20
5.1 General	20
5.2 Floating lidar system (without mooring system).....	20
5.2.1 Functional requirements	20
5.2.2 Documentary requirements	24
5.3 Mooring system (below the water line).....	24
5.3.1 Functional requirements	24
5.3.2 Documentary requirements	25
6 Unit qualification (calibration of FLS wind measurements).....	25
6.1 Calibration method overview.....	25
6.2 Component verification.....	26
6.2.1 General.....	26
6.2.2 Lidar onshore calibration	26
6.2.3 Auxiliary systems	26
6.3 Setup of offshore calibration test	26
6.3.1 Site requirements.....	26
6.3.2 Setup requirements.....	27
6.4 Full calibration test methodology	28
6.4.1 General.....	28
6.4.2 Identification of a trusted reference system.....	28
6.4.3 Data completion criteria.....	29
6.4.4 Wind speed uncertainty	29
6.5 Simplified calibration protocol	31
6.5.1 General.....	31
6.5.2 Campaign duration.....	31
6.5.3 Analysis	31
6.6 System and data availability	32
6.7 Offshore calibration intervals	33
6.8 Reporting requirements	34
7 Type qualification (classification).....	35
7.1 General	35
7.2 Treatment of intermediate variables.....	36
7.3 Long-term tests	36
7.3.1 Data acquisition.....	36

7.3.2	Data completion criteria.....	37
7.3.3	List of environmental variables to be considered	37
7.4	Sensitivity study	38
7.5	Evidence base supporting the evaluation of FLS performance	39
7.6	Reporting requirements	39
7.6.1	General.....	39
7.6.2	Reporting requirements for type qualification tests	40
7.6.3	Reporting requirements for evidence base.....	40
8	Quantification of final (measurement) uncertainty budget.....	41
8.2	Calculation of classification uncertainty.....	42
8.2.1	General.....	42
8.2.2	Sensitivity uncertainty scenarios.....	43
8.3	Calculation of calibration uncertainty	46
8.4	Calculation of configuration uncertainty.....	46
8.4.1	General.....	46
8.4.2	Drift tolerances	47
8.4.3	In situ data quality assurance.....	47
8.4.4	Change in buoy configuration.....	47
8.4.5	Change in buoy stability.....	47
9	Measurement procedure.....	47
9.1	General	47
9.2	Pre-deployment checks and requirements.....	48
9.2.1	Health, safety, and environment	48
9.2.2	Measurement setup.....	48
9.2.3	Mooring	49
9.3	Installation/deployment and documentation requirements	50
9.3.1	General.....	50
9.3.2	Checklist.....	50
9.3.3	Meta data format.....	51
9.4	Campaign	51
9.4.1	Campaign checks and notifications	51
9.4.2	In situ data quality assurance.....	52
9.4.3	In the event of a change in buoy configuration	53
9.4.4	Data availability	54
10	Reporting.....	55
Annex A (normative)	The instrument qualification cycle	57
A.1	General	57
A.1.1	Overview.....	57
A.1.2	Instrument qualification.....	57
A.1.3	Measurement uncertainty.....	57
A.1.4	The qualification cycle	58
A.2	Type qualification	59
A.2.1	General.....	59
A.2.2	Lidar measurement procedure.....	59
A.2.3	Intermediate value uncertainty due to changes in environmental conditions	60
A.2.4	List of environmental variables to be considered	60
A.2.5	Significance of uncertainty contribution	60
A.2.6	Evidence base supporting the adequacy of the WFR	60

A.2.7	Envelope of operational conditions	61
A.2.8	Uncertainty scenarios.....	62
A.2.9	Extension of evidence base	62
A.2.10	Test results comprising the evidence base.....	62
A.3	Unit qualification.....	63
A.3.1	General.....	63
A.3.2	Reference instrumentation	63
A.3.3	Measurement procedure	63
A.3.4	Filtering	63
A.4	Reporting requirements	63
A.4.1	Type qualification.....	63
A.4.2	Unit qualification	64
Annex B (informative)	Turbulence intensity (TI)	65
B.1	General	65
B.2	Definition	65
B.3	Estimation of TI based on FLS measurements	66
B.4	Evaluation of FLS based estimates of TI	66
Annex C (informative)	Specific measurement campaign (SMC) guidance.....	68
C.1	Health and safety guidance.....	68
C.2	Required documentation.....	69
C.3	Example deployment checklist	72
C.4	Operational documentation	74
C.5	In-situ data quality assurance	75
C.5.1	General.....	75
C.5.2	Numerical reference example.....	76
C.5.3	Fixed reference example	77
C.6	T-test – as a means to compare pre and post FLS configuration changes.....	78
Annex D (informative)	Hierarchy of uncertainties.....	79
D.1	The ACARA principle	79
D.2	Hierarchy of uncertainties.....	79
Bibliography.....		81
Figure 1 – Example illustration of Q-Q analysis.....		32
Figure 2 – Example of range analysis for shear coefficient – here scenario A		43
Figure 3 – Example of range analysis for temperature – here scenario B.....		44
Figure 4 – Graphical representation of method of deriving uncertainty for scenario B		45
Figure 5 – Overview of documentation and reporting requirements		56
Figure A.1 – The instrument qualification cycle.....		59
Figure A.2 – Operational scenarios		61
Figure B.1 – Turbulence intensity estimates derived from wind measurements.....		65
Figure C.1 – Example data flow chart for a floating lidar system		74
Figure C.2 – Example of data quality assurance process options.....		76
Figure D.1 – Hierarchy of uncertainties.....		80
Table C.1 – List of required documentation		70

INTERNATIONAL ELECTROTECHNICAL COMMISSION

WIND ENERGY GENERATION SYSTEMS –

Part 50-4: Use of floating lidar systems for wind measurements

FOREWORD

- 1) The International Electrotechnical Commission (IEC) is a worldwide organization for standardization comprising all national electrotechnical committees (IEC National Committees). The object of IEC is to promote international co-operation on all questions concerning standardization in the electrical and electronic fields. To this end and in addition to other activities, IEC publishes International Standards, Technical Specifications, Technical Reports, Publicly Available Specifications (PAS) and Guides (hereafter referred to as “IEC Publication(s)”). Their preparation is entrusted to technical committees; any IEC National Committee interested in the subject dealt with may participate in this preparatory work. International, governmental and non-governmental organizations liaising with the IEC also participate in this preparation. IEC collaborates closely with the International Organization for Standardization (ISO) in accordance with conditions determined by agreement between the two organizations.
- 2) The formal decisions or agreements of IEC on technical matters express, as nearly as possible, an international consensus of opinion on the relevant subjects since each technical committee has representation from all interested IEC National Committees.
- 3) IEC Publications have the form of recommendations for international use and are accepted by IEC National Committees in that sense. While all reasonable efforts are made to ensure that the technical content of IEC Publications is accurate, IEC cannot be held responsible for the way in which they are used or for any misinterpretation by any end user.
- 4) In order to promote international uniformity, IEC National Committees undertake to apply IEC Publications transparently to the maximum extent possible in their national and regional publications. Any divergence between any IEC Publication and the corresponding national or regional publication shall be clearly indicated in the latter.
- 5) IEC itself does not provide any attestation of conformity. Independent certification bodies provide conformity assessment services and, in some areas, access to IEC marks of conformity. IEC is not responsible for any services carried out by independent certification bodies.
- 6) All users should ensure that they have the latest edition of this publication.
- 7) No liability shall attach to IEC or its directors, employees, servants or agents including individual experts and members of its technical committees and IEC National Committees for any personal injury, property damage or other damage of any nature whatsoever, whether direct or indirect, or for costs (including legal fees) and expenses arising out of the publication, use of, or reliance upon, this IEC Publication or any other IEC Publications.
- 8) Attention is drawn to the Normative references cited in this publication. Use of the referenced publications is indispensable for the correct application of this publication.
- 9) IEC draws attention to the possibility that the implementation of this document may involve the use of (a) patent(s). IEC takes no position concerning the evidence, validity or applicability of any claimed patent rights in respect thereof. As of the date of publication of this document, IEC had not received notice of (a) patent(s), which may be required to implement this document. However, implementers are cautioned that this may not represent the latest information, which may be obtained from the patent database available at <https://patents.iec.ch>. IEC shall not be held responsible for identifying any or all such patent rights.

IEC TS 61400-50-4 has been prepared by of IEC technical committee 88: Wind energy generation systems. It is a Technical Specification.

The text of this Technical Specification is based on the following documents:

Draft	Report on voting
88/1042/DTS	88/1094/RVDTS

Full information on the voting for its approval can be found in the report on voting indicated in the above table.

The language used for the development of this Technical Specification is English.

This document was drafted in accordance with ISO/IEC Directives, Part 2, and developed in accordance with ISO/IEC Directives, Part 1 and ISO/IEC Directives, IEC Supplement, available at www.iec.ch/members_experts/refdocs. The main document types developed by IEC are described in greater detail at www.iec.ch/publications.

A list of all parts of the IEC 61400 series, under the general title: *Wind energy generation systems*, can be found on the IEC website.

The committee has decided that the contents of this document will remain unchanged until the stability date indicated on the IEC website under webstore.iec.ch in the data related to the specific document. At this date, the document will be

- reconfirmed,
- withdrawn, or
- revised.
