About the IEC

The International Electrotechnical Commission (IEC) is the leading global organization that prepares and publishes International Standards for all electrical, electronic and related technologies.

About IEC publications

The technical content of IEC publications is kept under constant review by the IEC. Please make sure that you have the latest edition, a corrigendum or an amendment might have been published.

IEC publications search -

webstore.iec.ch/advsearchform

The advanced search enables to find IEC publications by a variety of criteria (reference number, text, technical committee, ...). It also gives information on projects, replaced and withdrawn publications.

IEC Just Published - webstore.iec.ch/justpublished

Stay up to date on all new IEC publications. Just Published details all new publications released. Available online and once a month by email.

IEC Customer Service Centre - webstore.iec.ch/csc

If you wish to give us your feedback on this publication or need further assistance, please contact the Customer Service Centre: sales@iec.ch.

IEC Products & Services Portal - products.iec.ch

Discover our powerful search engine and read freely all the publications previews, graphical symbols and the glossary. With a subscription you will always have access to up to date content tailored to your needs.

Electropedia - www.electropedia.org

The world's leading online dictionary on electrotechnology, containing more than 22 500 terminological entries in English and French, with equivalent terms in 25 additional languages. Also known as the International Electrotechnical Vocabulary (IEV) online.

CONTENTS

FOREWORD	5
1 Scope	7
2 Normative references	7
3 Terms, definitions, symbols and abbreviated terms	7
3.1 Terms and definitions	7
3.2 Symbols and abbreviated terms	10
3.2.1 Symbols	10
3.2.2 Abbreviated terms	12
4 Principal elements	13
4.1 General	13
4.2 Minimum reliability level and component classes	14
4.3 Limit states	14
4.4 Data validity	15
5 Uncertainty representation and modelling	16
5.1 General	16
5.1.1 Uncertainties	16
5.1.2 Types of uncertainty	16
5.1.3 Interpretation of probability and treatment of uncertainty	16
5.1.4 Probabilistic model	17
5.1.5 Uncertainties for wind turbines	18
5.2 External condition uncertainty modelling	19
5.2.1 General	19
5.2.2 Wind conditions	19
5.2.3 Normal wind conditions	20
5.2.4 Other conditions	21
5.2.5 Electrical network conditions	22
5.3 Load uncertainty modelling	23
5.3.1 General	23
5.3.2 Aeroelastic model	23
5.3.3 Extreme loads	24
5.3.4 Fatigue loads	25
5.4 Structural resistance uncertainty modelling	25
5.4.1 General	25
5.4.2 Geometrical properties	25
5.4.3 Material properties	25
5.4.4 Resistance models	26
5.4.5 Fatigue strength and damage accumulation	26
6 Performance modelling	26
6.1 General	26
6.2 Structural performance of primary structures	26
6.2.1 General	26
6.2.2 Load performance calibration for ultimate limit states	27
6.2.3 Evaluation of serviceability limit states	30
6.3 Performance of primary mechanical and electrical components	30
6.3.1 General	30
6.3.2 Requirements for mechanical components	31

6.3.3	Serviceability limit states for mechanical components	31
6.3.4	Requirements for electrical components and control and protection systems	31
6.4	Robustness	32
7	Assessment of reliability	32
7.1	Overview	32
7.1.1	General	32
7.1.2	Reliability measures	32
7.1.4	Accuracy requirements	34
7.1.5	Sensitivity analysis	34
7.2	Reliability-based method	35
7.2.1	General	35
7.2.2	Probability of failure for extreme design situations	35
7.2.3	Probability of failure for fatigue design situations	35
7.2.4	Updating probability of failure using test or inspection data	36
7.3	Semi-probabilistic method	36
7.3.1	General	36
7.3.2	Representative and characteristic values	36
7.3.3	Partial factor method for extreme and fatigue design situations	37
7.3.4	Reliability-based calibration of partial safety factors	37
8	Site suitability analysis	37
8.1	General approach and scope	37
8.2	Reliability models for site suitability analysis	38
8.2.1	General	38
8.2.2	Load models for site suitability assessment	39
8.2.3	Resistance model for site suitability assessment	40
8.2.4	Structural performance on site specific conditions	41
8.3	Site specific uncertainty modelling	41
8.3.1	General	41
8.3.2	Quantification of site-specific uncertainties	45
8.4	Reliability assessment	46
Annex A (informative)	Uncertainty quantification	47
A.1	General	47
A.2	Bayesian methods	47
A.2.1	General	47
A.2.2	Closed form solutions for parameter estimation	48
A.2.3	Exact inference for continuous parameters	51
A.2.4	Sampling-based inference	51
A.2.5	Exact inference for discretized parameters	51
A.3	Maximum likelihood	51
A.4	Model uncertainties	52
A.4.1	General	52
A.4.2	Example: Model uncertainty quantification	54
Annex B (informative)	Inverse FORM	63
Annex C (informative)	Example calculations for reliability assessment	67
C.1	General	67
C.2	Ultimate limit state	67
C.2.1	Design equation	67

C.2.2	Limit state equation	67
C.2.3	Reliability assessment	68
C.2.4	Direct reliability-based design	69
C.2.5	Reliability-based calibration of partial safety factors	69
C.2.6	Assess the accuracy of the computation and perform sensitivity studies	70
C.3	Fatigue limit state	71
C.3.1	General	71
C.3.2	Limit state equation	72
C.3.3	Reliability-based calibration of partial safety factors	74
Annex D (informative)	Formulation of event driven design load cases	76
D.1	General.....	76
D.2	Formulation of wind conditions with conditional events (Example DLC 2.3)	76
D.3	Probability of failure for independent events (Example DLC 2.1)	77
Annex E (informative)	Updating of distributions based on evidence.....	79
E.1	Updating of distributions for basic variables	79
E.2	Event updating.....	80
Annex F (informative)	Example of the relative approach to site suitability assessment	81
Annex G (informative)	Uncertainty scenarios for site specific wind assessment	83
Bibliography.....		87

Figure 1 – Application of a mathematical model to estimate an output based on a given input..... 16

Figure 2 – Typical flow chart and uncertainties to be considered in probabilistic design of wind turbine components

Figure 3 – Typical split between uncertainties which should be propagated through the aeroelastic model (shaded) and those which should be represented by model uncertainty

Figure 4 – Measures of reliability computation of failure probability..... 33

Figure 5 – Highlight of relevant uncertainties related to site suitability assessment

Figure A.1 – Graphical representation of the structure for estimation of a) the mean value of X when the population variance is known and b) the mean value and the variance of X 48

Figure A.2 – Plot for estimation of model uncertainty

Figure A.3 – Experiment value Y as function of theoretical value $h(x)$ 55

Figure A.4 – Cumulative distribution and probability density functions for the predictive distribution, the estimated lognormal distribution and the predictive distribution for $n = 5$

Figure A.5 – Various approaches for MCMC models for model uncertainty quantification

Figure A.6 – Probability density function for each method

Figure A.7 – Cumulative distribution function for each method

Figure A.8 – Lower tail of the cumulative distribution function for each method

Figure A.9 – Lower tail of the cumulative distribution function for each method for a sample size $n = 50$

Figure B.1 – Contour line for ETM in the u -space and the linear approximation used in IFORM..... 65

Figure B.2 – Contour lines for ETM, linear approximation (in the u -space), and the characteristic values defined in IEC 61400-1

Figure C.1 – Yearly (conditional) probability of failure for the calibration example with $COV_{gen} = 20,0 \%$ and $\gamma_R = 1,35$	75
Figure C.2 – Yearly (conditional) reliability index for the calibration example with $COV_{gen} = 20,0 \%$ and $\gamma_R = 1,35$	75
Table 1 – Minimum reliability requirements	14
Table A.1 – Theoretical and experimental values	54
Table A.2 – Stochastic model.....	58
Table A.3 – Parameters and moments estimated using each method	60
Table A.4 – Selected quantiles for the predictive distribution (including statistical/parameter uncertainty) and the fitted lognormal distribution (not including statistical/parameter uncertainty) using each method	60
Table C.1 – Baseline stochastic variables for load and resistance model	68
Table C.2 – Annual reliability index for different main wind turbine components (tower) and design situations (DLC 1.3 and 6.1)	69
Table C.3 – Resulting reliability index for different values of design parameter for simplified example	69
Table C.4 – Resulting reliability for different partial safety factor for loads (given $\gamma_M = 1,2$)	70
Table C.5 – Assessment of reliability index convergence with number of draws in Monte Carlo simulations	70
Table C.6 – Sensitivities of the reliability index with respect to each random variable in the limit state equation.....	71
Table C.7 – Baseline stochastic model for the fatigue limit state analysis	73
Table C.8 – Results for safety factor calibration exercise under different assumptions of COV_{gen}	74
Table F.1 – Stochastic model.....	81
Table G.1 – Uncertainty scenarios for anemometer calibration.....	83
Table G.2 – Uncertainty scenarios for mounting effects of anemometers	83
Table G.3 – Uncertainty scenarios for measurement heights.....	83
Table G.4 – Uncertainty scenarios for amount of available data	84
Table G.5 – Uncertainty scenarios for long-term wind speed distribution.....	84
Table G.6 – Uncertainty scenarios for extreme wind speed events.....	84
Table G.7 – Uncertainty scenarios for terrain map quality	84
Table G.8 – Uncertainty scenarios for wind shear modelling	85
Table G.9 – Uncertainty scenarios for terrain complexity.....	85
Table G.10 – Uncertainty scenarios for distance from measurement point to position of interest	85
Table G.11 – Uncertainty scenarios for wake models	85
Table G.12 – Representative values of COV of wind parameters for normal scenario.....	86

INTERNATIONAL ELECTROTECHNICAL COMMISSION

Wind energy generation systems – Part 9: probabilistic design measures for wind turbines

FOREWORD

- 1) The International Electrotechnical Commission (IEC) is a worldwide organization for standardization comprising all national electrotechnical committees (IEC National Committees). The object of IEC is to promote international co-operation on all questions concerning standardization in the electrical and electronic fields. To this end and in addition to other activities, IEC publishes International Standards, Technical Specifications, Technical Reports, Publicly Available Specifications (PAS) and Guides (hereafter referred to as "IEC Publication(s)"). Their preparation is entrusted to technical committees; any IEC National Committee interested in the subject dealt with may participate in this preparatory work. International, governmental and non-governmental organizations liaising with the IEC also participate in this preparation. IEC collaborates closely with the International Organization for Standardization (ISO) in accordance with conditions determined by agreement between the two organizations.
- 2) The formal decisions or agreements of IEC on technical matters express, as nearly as possible, an international consensus of opinion on the relevant subjects since each technical committee has representation from all interested IEC National Committees.
- 3) IEC Publications have the form of recommendations for international use and are accepted by IEC National Committees in that sense. While all reasonable efforts are made to ensure that the technical content of IEC Publications is accurate, IEC cannot be held responsible for the way in which they are used or for any misinterpretation by any end user.
- 4) In order to promote international uniformity, IEC National Committees undertake to apply IEC Publications transparently to the maximum extent possible in their national and regional publications. Any divergence between any IEC Publication and the corresponding national or regional publication shall be clearly indicated in the latter.
- 5) IEC itself does not provide any attestation of conformity. Independent certification bodies provide conformity assessment services and, in some areas, access to IEC marks of conformity. IEC is not responsible for any services carried out by independent certification bodies.
- 6) All users should ensure that they have the latest edition of this publication.
- 7) No liability shall attach to IEC or its directors, employees, servants or agents including individual experts and members of its technical committees and IEC National Committees for any personal injury, property damage or other damage of any nature whatsoever, whether direct or indirect, or for costs (including legal fees) and expenses arising out of the publication, use of, or reliance upon, this IEC Publication or any other IEC Publications.
- 8) Attention is drawn to the Normative references cited in this publication. Use of the referenced publications is indispensable for the correct application of this publication.
- 9) IEC draws attention to the possibility that the implementation of this document may involve the use of (a) patent(s). IEC takes no position concerning the evidence, validity or applicability of any claimed patent rights in respect thereof. As of the date of publication of this document, IEC had not received notice of (a) patent(s), which may be required to implement this document. However, implementers are cautioned that this may not represent the latest information, which may be obtained from the patent database available at <https://patents.iec.ch>. IEC shall not be held responsible for identifying any or all such patent rights.

IEC TS 61400-9 has been prepared by IEC technical committee 88: Wind energy generation systems. It is a Technical Specification.

The text of this Technical Specification is based on the following documents:

Draft	Report on voting
88/1063/DTS	88/1102/RVDTS

Full information on the voting for its approval can be found in the report on voting indicated in the above table.

The language used for the development of this Technical Specification is English.

This document was drafted in accordance with ISO/IEC Directives, Part 2, and developed in accordance with ISO/IEC Directives, Part 1 and ISO/IEC Directives, IEC Supplement, available
