About the IEC

The International Electrotechnical Commission (IEC) is the leading global organization that prepares and publishes International Standards for all electrical, electronic and related technologies.

About IEC publications

The technical content of IEC publications is kept under constant review by the IEC. Please make sure that you have the latest edition, a corrigendum or an amendment might have been published.

IEC publications search - webstore.iec.ch/advsearchform

The advanced search enables to find IEC publications by a variety of criteria (reference number, text, technical committee, ...). It also gives information on projects, replaced and withdrawn publications.

IEC Just Published - webstore.iec.ch/justpublished

Stay up to date on all new IEC publications. Just Published details all new publications released. Available online and once a month by email.

IEC Customer Service Centre - webstore.iec.ch/csc

If you wish to give us your feedback on this publication or need further assistance, please contact the Customer Service Centre: sales@iec.ch.

IEC Products & Services Portal - products.iec.ch

Discover our powerful search engine and read freely all the publications previews, graphical symbols and the glossary. With a subscription you will always have access to up to date content tailored to your needs.

Electropedia - www.electropedia.org

The world's leading online dictionary on electrotechnology, containing more than 22 500 terminological entries in English and French, with equivalent terms in 25 additional languages. Also known as the International Electrotechnical Vocabulary (IEV) online.

CONTENTS

FOREWORD.....	6
INTRODUCTION.....	8
1 Scope.....	10
2 Normative references	10
3 Terms and definitions	10
4 Symbols and abbreviated terms.....	12
5 Classes of resource assessment	13
5.1 Introductory remarks General.....	13
5.2 Resource assessment and characterization flow chart	14
6 Study planning and data collection	17
6.1 Introductory remarks General.....	17
6.2 Study area	17
6.3 Bathymetry	17
6.4 Existing wave data.....	18
6.5 Wave measurement	18
6.5.1 Purpose.....	18
6.5.2 Selection of measuring instrument and analysis methodology.....	18
6.5.3 Instrument calibration.....	19
6.5.4 Instrument deployment	20
6.5.5 Redundancy	
6.5.5 Analysis of measurements	20
6.6 Wind data	21
6.7 Tidal and non-tidal current data	21
6.8 Tide data Water level fluctuation.....	21
6.9 Ice coverage and/or exceptional environmental conditions	22
6.10 Water density.....	22
6.11 Gravitational acceleration	22
7 Numerical modelling	22
7.1 Introductory remarks General.....	22
7.2 Suitable numerical models	22
7.3 Definition of boundary conditions	25
7.4 Modelling the nearshore resource	26
7.5 Effect of WEC array on wave energy resource	26
7.6 Validation of numerical models	27
7.6.1 Introductory remarks General	27
7.6.2 Validation data specification	27
7.6.3 Procedure.....	28
7.6.4 Extent of validation	31
7.7 Model tuning and calibration	33
8 Measure-Correlate-Predict (MCP) methods	33
8.1 Introductory remarks General.....	33
8.2 Procedures	34
9 Data analysis.....	35
9.1 Introductory remarks General.....	35
9.2 Characterization using two-dimensional wave spectra.....	35
9.2.1 Overview	35

9.2.2	Omni-directional wave power.....	36
9.2.3	Characteristic wave height.....	36
9.2.4	Characteristic wave period.....	37
9.2.5	Spectral width.....	37
9.2.6	Directionally resolved wave power.....	37
9.2.7	Wave system partitioning.....	38
9.3	Estimation of wave power using parameterized sea states.....	38
9.4	Aggregation and statistics of results.....	39
9.4.1	General.....	39
9.4.2	Mean.....	39
9.4.3	Standard deviation.....	40
9.4.4	Percentiles.....	40
9.4.5	Monthly variability.....	40
9.5	Uncertainty of the resource assessment.....	40
10	Reporting of results.....	41
10.1	Introductory remarks General.....	41
10.2	Selection of study points.....	41
10.3	Technical report.....	41
10.4	Digital database.....	42
10.5	Presentation of regional information.....	43
10.6	Presentation of information at study points.....	44
Annex A (normative)	Calculation of annual energy production (AEP).....	48
A.1	Wave energy converter AEP at primary site.....	48
A.2	Standard methodology.....	48
A.3	Alternative methodology.....	48
A.4	Completeness of the capture width matrix for AEP.....	49
A.5	Wave energy converter AEP at a second location using measured assessment data.....	49
A.5.1	Connection to 62600-100.....	49
A.5.2	Calculate AEP at Location 2 using complemented capture width matrix and Location 2 resource data.....	49
A.5.3	Assessment of confidence.....	50
A.6	Example Analysis.....	50
A.6.1	Connection to 62600-100.....	50
A.6.2	Calculate AEP at Location 2 using complemented capture width matrix and Location 2 resource data.....	50
A.6.3	Assessment of confidence.....	51
A.7	Sources of uncertainty for AEP at Location 2.....	51
A.7.1	Comparisons between Location 1 and Location 2.....	51
A.7.2	Bathymetry and water depth.....	51
A.7.3	Current.....	51
A.7.4	Wave spectrum.....	52
A.7.5	Wave direction and short-crested waves.....	52
A.7.6	Wave converter modifications.....	52
Annex B (normative)	Evaluation of measurement uncertainty.....	53
B.1	General.....	53
B.2	Uncertainty analysis.....	53
Annex C (informative)	A method for sensitivity analysis.....	54
C.1	General.....	54

C.2	Specification of significance	54
C.3	Sample sea states	55
C.4	Condition of insensitivity	55
Annex D (informative)	Example calculation of long-term uncertainty	56
D.1	General.....	56
D.2	Climatic variability.....	57
D.3	Anthropogenic climatic variability	60
D.4	Conclusion.....	60
Annex E (informative)	Nearshore resource.....	61
E.1	General.....	61
E.2	Limiting water depth.....	61
E.3	Bathymetry	62
E.4	Fluctuating water level	62
E.5	Currents.....	62
E.6	Validation.....	62
E.7	Uncertainty	63
Bibliography.....		64
Figure 1 – Wave resource assessment and characterization flow chart		16
Figure 2 – Validation flow chart.....		31
Figure 3 – Example map of mean annual wave power.....		44
Figure 4 – Example of a scatter table summarizing a long-term wave climate in terms of H_{m0} and T_e		46
Figure 5 – Example of a wave power rose.....		46
Figure 6 – Example plot showing the distribution of wave power for different months		47
Figure D.1 – Annual wave power variability in the UK. Eleven sites in North East, North West and South West Regions [1].....		56
Figure D.2 – Comparison between mean annual power from the E04 model data set and the North Atlantic Oscillation index from 1988 to 2006 [2]		57
Figure D.3 – Recorded North Atlantic Oscillation index from 1825 to 2010 (red bars), with a five year moving average (black line) [2].....		58
Figure D.4 – Annual, 5-year, 10-year and 20-year moving averages of available wave power at the a site [4]		59
Figure D.5 – Annual mean power and running 5, 10 and 20-year mean values, 150 km North of Scotland [3]		59
Table 1 – Classes of resource assessment		14
Table 2 – Resolution of bathymetric data		17
Table 3 – Minimum requirements for wave measuring instruments and associated analysis		19
Table 4 – Resolution of wind data		21
Table 5 – Elements of suitable numerical models.....		23
Table 6 – Minimum validation requirements		30
Table 7 – Uncertainty categories.....		40
Table 8 – Summary of wave energy resource parameters to be archived and mapped		43
Table A.1 – Table of AEP contributions.....		50

Table B.1 – List of uncertainty components..... 53
Table C.1 – Recommended sensitivity thresholds 54
Table C.2 – Recommended condition of insensitivity..... 55
Table D.1 – Comparison of mean average error (MAE) and maximum error (max. error) between the 3, 5 and 10-year averages of the data at the combined UK sites and the E04 Data set (WaveHub)..... 57
