**About the IEC**

The International Electrotechnical Commission (IEC) is the leading global organization that prepares and publishes International Standards for all electrical, electronic and related technologies.

**About IEC publications**

The technical content of IEC publications is kept under constant review by the IEC. Please make sure that you have the latest edition, a corrigendum or an amendment might have been published.

**IEC publications search - [webstore.iec.ch/advsearchform](http://webstore.iec.ch/advsearchform)**

The advanced search enables to find IEC publications by a variety of criteria (reference number, text, technical committee, ...). It also gives information on projects, replaced and withdrawn publications.

**IEC Just Published - [webstore.iec.ch/justpublished](http://webstore.iec.ch/justpublished)**

Stay up to date on all new IEC publications. Just Published details all new publications released. Available online and once a month by email.

**IEC Customer Service Centre - [webstore.iec.ch/csc](http://webstore.iec.ch/csc)**

If you wish to give us your feedback on this publication or need further assistance, please contact the Customer Service Centre: [sales@iec.ch](mailto:sales@iec.ch).

**IEC Products & Services Portal - [products.iec.ch](http://products.iec.ch)**

Discover our powerful search engine and read freely all the publications previews, graphical symbols and the glossary. With a subscription you will always have access to up to date content tailored to your needs.

**Electropedia - [www.electropedia.org](http://www.electropedia.org)**

The world's leading online dictionary on electrotechnology, containing more than 22 500 terminological entries in English and French, with equivalent terms in 25 additional languages. Also known as the International Electrotechnical Vocabulary (IEV) online.

## CONTENTS

FOREWORD.....	5
INTRODUCTION.....	7
1 Scope.....	10
2 Normative references .....	10
3 Terms, definitions and abbreviated terms .....	10
3.1 Terms and definitions.....	10
3.2 Abbreviated terms.....	12
4 Conformance.....	12
5 Cabling design.....	12
5.1 Overview.....	12
5.1.1 General .....	12
5.1.2 Consideration criteria to sustainable cabling systems .....	13
5.2 Cabling design selection criteria .....	14
5.3 Considerations for renovation .....	14
5.4 Reduction of waste materials during the lifetime of the installation .....	15
5.5 Cabling infrastructure installation planning and practices .....	15
5.6 Impact of cabling infrastructure on energy requirements .....	15
5.7 Designing for quality to reduce rework .....	16
5.8 Balancing sustainability and other considerations .....	16
5.9 Recommended metrics to evaluate cabling sustainability .....	16
5.10 Creating sustainability mind-set among stakeholders .....	16
5.11 Economic aspects of sustainability.....	17
5.12 Transparency of documents for sustainable cabling system .....	17
6 Selection, packaging and transportation of components and related materials.....	17
6.1 General.....	17
6.2 Selection of components and related material.....	18
6.3 Packaging of components and related material .....	18
6.4 Transportation of components and related material.....	18
7 Installation, operation and maintenance.....	19
7.1 General.....	19
7.2 Process of installation, maintenance and operation.....	19
7.2.1 General .....	19
7.3 Installation practices .....	20
7.3.1 Recommendations for installation practices .....	20
7.3.2 Pre-installation step requirements.....	20
7.3.3 Installation step .....	20
7.3.4 Post-installation step .....	21
7.4 Operation.....	22
7.4.1 Requirements .....	22
7.4.2 Recommendations .....	22
7.5 Maintenance .....	23
7.5.1 Requirements .....	23
7.5.2 Recommendations .....	23
8 Management of waste materials .....	24
8.1 General.....	24
8.2 Cabling waste hierarchy.....	24

8.3	Waste electrical and electronic equipment .....	25
8.4	Waste assessment.....	25
8.5	Documentation.....	25
8.5.1	Waste management plan .....	25
8.5.2	Proof of assessment .....	26
8.5.3	Certificate of recycling .....	27
8.6	Waste storage and handling.....	27
8.6.1	Storage and handling.....	27
8.6.2	Risks .....	27
8.7	Waste actions .....	27
8.7.1	General .....	27
8.7.2	Reuse.....	28
8.7.3	Repurpose.....	28
8.7.4	Recycle .....	28
8.7.5	Dispose .....	29
9	Skill sets and training objectives.....	29
9.1	Overview.....	29
9.1.1	General .....	29
9.1.2	Needs of stakeholders .....	29
9.2	Work performance abilities, competencies and skill sets .....	30
9.3	Generic work performance ability requirements.....	30
9.3.1	General .....	30
9.3.2	Understanding of and contribution to SDGs .....	31
9.3.3	Collaboration with stakeholders .....	31
9.3.4	Education and training .....	31
9.4	Specialized work performance ability requirements .....	31
9.4.1	General .....	31
9.4.2	Understanding of requirements for sustainable cabling systems .....	32
9.4.3	Approaches for reduction of environmental footprints.....	32
9.4.4	Designing practices .....	32
9.4.5	Installation management and evaluation practice.....	32
9.4.6	Installation practice.....	33
9.4.7	Operation, management and maintenance of sustainable cabling systems .....	34
9.5	Best practices, education and training.....	35
9.5.1	Collection and publication of best practices .....	35
9.5.2	Sustainability specialist for sustainable cabling system and training .....	35
9.5.3	Criteria and means of evaluation .....	35

## Part 5: Sustainability

### FOREWORD

- 1) ISO (the International Organization for Standardization) and IEC (the International Electrotechnical Commission) form the specialized system for worldwide standardization. National bodies that are members of ISO or IEC participate in the development of International Standards through technical committees established by the respective organization to deal with particular fields of technical activity. ISO and IEC technical committees collaborate in fields of mutual interest. Other international organizations, governmental and non-governmental, in liaison with ISO and IEC, also take part in the work.
- 2) The formal decisions or agreements of IEC and ISO on technical matters express, as nearly as possible, an international consensus of opinion on the relevant subjects since each technical committee has representation from all interested IEC and ISO National bodies.
- 3) IEC and ISO documents have the form of recommendations for international use and are accepted by IEC and ISO National bodies in that sense. While all reasonable efforts are made to ensure that the technical content of IEC and ISO documents is accurate, IEC and ISO cannot be held responsible for the way in which they are used or for any misinterpretation by any end user.
- 4) In order to promote international uniformity, IEC and ISO National bodies undertake to apply IEC and ISO documents transparently to the maximum extent possible in their national and regional publications. Any divergence between any IEC and ISO document and the corresponding national or regional publication shall be clearly indicated in the latter.
- 5) IEC and ISO do not provide any attestation of conformity. Independent certification bodies provide conformity assessment services and, in some areas, access to IEC and ISO marks of conformity. IEC and ISO are not responsible for any services carried out by independent certification bodies.
- 6) All users should ensure that they have the latest edition of this document.
- 7) No liability shall attach to IEC and ISO or their directors, employees, servants or agents including individual experts and members of its technical committees and IEC and ISO National bodies for any personal injury, property damage or other damage of any nature whatsoever, whether direct or indirect, or for costs (including legal fees) and expenses arising out of the publication, use of, or reliance upon, this ISO/IEC document or any other IEC and ISO documents.
- 8) Attention is drawn to the Normative references cited in this document. Use of the referenced publications is indispensable for the correct application of this document.
- 9) IEC and ISO draw attention to the possibility that the implementation of this document may involve the use of (a) patent(s). IEC and ISO take no position concerning the evidence, validity or applicability of any claimed patent rights in respect thereof. As of the date of publication of this document, IEC and ISO had not received notice of a patent, which may be required to implement this document. However, implementers are cautioned that this may not represent the latest information, which may be obtained from the patent database available at <https://patents.iec.ch> and [www.iso.org/patents](http://www.iso.org/patents). IEC and ISO shall not be held responsible for identifying any or all such patent rights.

ISO/IEC 14763-5 has been prepared by subcommittee 25: Interconnection of information technology equipment, of ISO/IEC joint technical committee 1: Information technology. It is an International Standard.

The text of this International Standard is based on the following documents:

Draft	Report on voting
JTC1-SC25/3302/FDIS	JTC1-SC25/3313/RVD

Full information on the voting for its approval can be found in the report on voting indicated in the above table.

The language used for the development of this International Standard is English.

This document was drafted in accordance with ISO/IEC Directives, Part 2, and developed in accordance with ISO/IEC Directives, Part 1, available at [www.iec.ch/members\\_experts/refdocs](http://www.iec.ch/members_experts/refdocs) and [www.iso.org/directives](http://www.iso.org/directives).

A list of all parts in the ISO/IEC 14763 series, published under the general title *Information technology – Implementation and operation of customer premises cabling*, can be found on the IEC website.

## INTRODUCTION

Sustainability is most often defined as meeting the needs of the present without compromising the ability of future generations to meet theirs. It has three main pillars: economic, environmental, and social. Although there appears to be no recorded origin of this concept, true sustainability is generally recognized as being where the three pillars (objectives) overlap.

Focusing on sustainability, it is widely recognized that generic cabling in accordance with ISO/IEC 11801 standards is intended to provide the user with an information technology infrastructure, to support both wired and wireless solutions, with extended life expectancy.

IT cabling systems are not only defined to transport data. They are more and more used for remote powering. Therefore, energy efficiency and power loss are becoming an important aspect of sustainability during operation.

As highlighted in the Introduction of many standards in the ISO/IEC 11801 series (e.g. ISO/IEC 11801-2), *“life expectancy of generic cabling systems can vary depending on environmental conditions, supporting applications, aging of materials used in cables, and other factors, such as access to pathways (campus pathways are more difficult to access than building pathways)”* and *“a lack of design foresight, the use of inappropriate components, incorrect installation, poor administration or inadequate support can threaten quality of service and have commercial consequence for all types of users”*.

Those purchasing cabling infrastructures, and the interconnected information technology equipment, seek solutions which meet their business, technical and social objectives.

Commercial pressures can result in a reduction of environmental sustainability of the cabling infrastructure by forcing imminent requirements to take priority over strategic planning resulting in short-term decisions being taken regarding design, installation and quality assurance of the cabling infrastructure. In such cases, design choices can be made which, while reducing initial installation costs, can frequently incur medium- to long-term losses due to substantial repair and maintenance costs. There are numerous cases in which the standards have not been complied with even if they are understood, which results in a reduction of sustainability.

To support the long-term viability of the infrastructure, the skill levels of those involved in the design and installation process are addressed by improving:

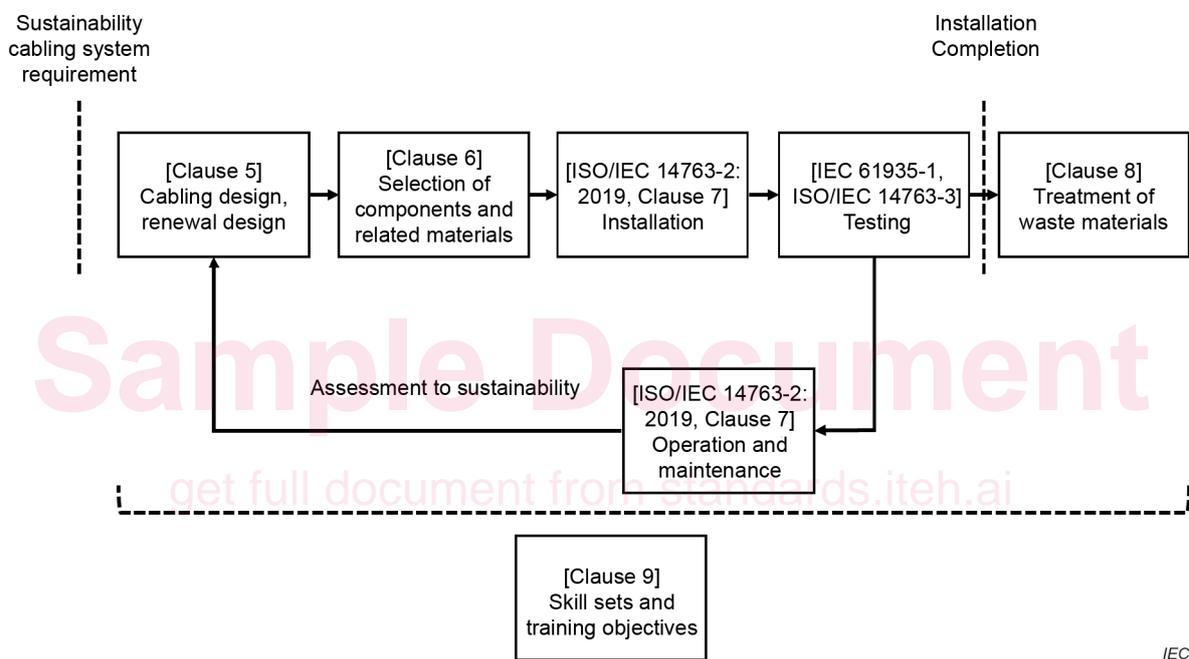

- the definition of the necessary skill sets to support the application of ISO/IEC 14763-2 and associated standards rather than relying on proprietary knowledge and specifications used by individual companies;
- The clarity of these defined skill sets to support the training and employment of skilled workers;
- the understanding of the cabling design and installation standards along with how they balance the sustainability pillars;
- the selection, use, and support of equipment needed in the cabling lifecycle, including for test and maintenance purposes.

Recognizing that elements of the cabling infrastructure and information technology equipment will likely be replaced during their lifetime, a reduction of both the impact of material usage and of disruption of services provided by the cabling infrastructure is pursued.

This document is intended for all the following stakeholders of cabling systems:

- supplier: cabling component and infrastructure supplier;
- owner: building owner and manager;
- operator: operator of information technology cabling installations;
- constructor: designer, installer of information technology cabling installations;
- user: user of information technology cabling installations;
- educator: organization delivering training to improve the skill sets of designers, installers and users of information technology cabling installations.

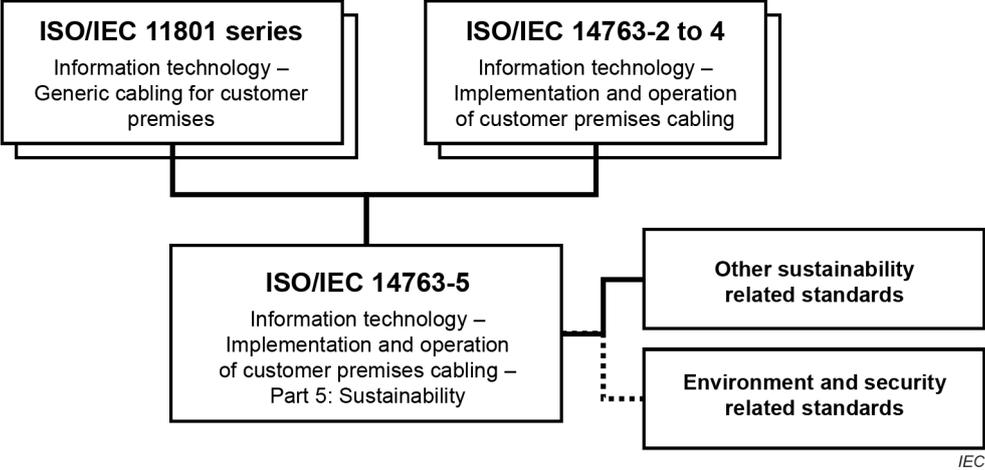

Figure 1 shows a schematic relationship between the general procedure for installing the sustainable cabling system and the contents of each clause of this document.

**Figure 1 – Schematic representation of cabling standards in system lifecycle**

This document is one of several documents prepared in support of international standards and technical reports for cabling design produced by ISO/IEC JTC 1/SC 25. Figure 2 shows the inter-relationship between these standards and technical reports.

Users of this document should be familiar with the applicable cabling design standard of the ISO/IEC 11801 series and ISO/IEC 14763-2.

**Figure 2 – Schematic relationship between ISO/IEC 14763-5 and other relevant standards**

NOTE Telecommunications and cabling infrastructure affects raw material consumption. The cabling infrastructure design and installation process can influence the product life and sustainability of the system. It is important to research local building practices for a sustainable environment and conservation of fossil fuels.

# INFORMATION TECHNOLOGY – IMPLEMENTATION AND OPERATION OF CUSTOMER PREMISES CABLING –

## Part 5: Sustainability

### 1 Scope

This document specifies requirements and recommendations to maximize the sustainability of cabling systems including both customer premises infrastructure and the accommodation of information technology equipment by addressing the

- a) cabling design;
- b) selection, packaging and transportation of components and related materials;
- c) installation, operation and maintenance;
- d) management of waste materials;
- e) skill sets necessary for designers, installers and users.

### 2 Normative references

The following documents are referred to in the text in such a way that some or all of their content constitutes requirements of this document. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.

IEC TR 62839-1, *Environmental declaration – Part 1: Wires, cables and accessory products – Specific rules*

ISO/IEC 14763-2:2019, *Information technology – Implementation and operation of customer premises cabling – Part 2: Planning and installation*

ISO/IEC TS 29125, *Information technology Telecommunications cabling requirements for remote powering of terminal equipment*

ISO 11014, *Safety data sheet for chemical products Content and order of sections*

### 3 Terms, definitions and abbreviated terms

#### 3.1 Terms and definitions

For the purposes of this document the following terms and definitions apply.

ISO and IEC maintain terminology databases for use in standardization at the following addresses:

- IEC Electropedia: available at <https://www.electropedia.org/>
- ISO Online browsing platform: available at <https://www.iso.org/obp>
