Foreword	vi
1 Scope	1
2 Normative references	1
3 Terms and definitions	1
3.1 Definitions	1
3.2 Symbols	3
4 General provision concerning test pieces	4
5 Test method for determining tensile properties	4
5.1 Test pieces	4
5.1.1 Types and dimensions	4
5.1.2 Preparation	5
5.1.3 Curing of test pieces	7
5.1.4 Anchorage portion of test pieces	7
5.1.5 Conditioning of test pieces	7
5.1.6 Number of test pieces	8
5.2 Testing machine and measuring devices	8
5.2.1 Testing machine	8
5.2.2 Strain gauges/extensometers	8
5.3 Test method	8
5.3.1 Dimensions of test pieces	8
5.3.2 Mounting of strain gauges/extensometers	8
5.3.3 Mounting of test piece	8
5.3.4 Loading rate	8
5.3.5 Test temperature	8
5.3.6 Range of test	8
5.4 Calculation and expression of test results	9
5.4.1 General	9
5.4.2 Load-strain curve	9
5.4.3 Tensile strength	9
5.4.4 Young's modulus	10
5.4.5 Ultimate strain	10
5.5 Test report	10
6 Test method for overlap splice strength	11
6.1 Test pieces	11
6.1.1 Dimensions	11
6.1.2 Preparation	11
6.1.3 Curing of test pieces	12
6.1.4 Anchorage portion of test pieces	12
6.1.5 Conditioning of test pieces	12
6.1.6 Number of test pieces	12
6.2 Testing machine	13
6.3 Test method	13
6.3.1 Dimensions of test pieces	13
6.3.2 Mounting the test piece	13
6.3.3 Loading rate	13
6.3.4 Range of test	13
6.4 Calculation and expression of test results	13
6.4.1 General	13
6.4.2 Failure categories	13
6.4.3 Overlap-splice strength	14
6.5 Test report	14
7 Test method for determining bond properties of FRP sheets to concrete	15
7.1 Test pieces	15

7.1.1	Types and dimensions	15
7.1.2	Quality of concrete	17
7.1.3	Steel bars	17
7.1.4	Preparation of test pieces	17
7.1.5	Conditioning of test pieces	18
7.1.6	Number of test pieces	19
7.2	Testing machine and measuring devices	19
7.2.1	Testing machine	19
7.2.2	Chucks	19
7.3	Test method	19
7.3.1	Dimensions of the test pieces	19
7.3.2	Mounting of test pieces	19
7.3.3	Loading rate	19

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

The procedures used to develop this document and those intended for its further maintenance are described in the ISO/IEC Directives, Part 1. In particular, the different approval criteria needed for the different types of ISO document should be noted. This document was drafted in accordance with the editorial rules of the ISO/IEC Directives, Part 2 (see www.iso.org/directives).

ISO draws attention to the possibility that the implementation of this document may involve the use of (a) patent(s). ISO takes no position concerning the evidence, validity or applicability of any claimed patent rights in respect thereof. As of the date of publication of this document, ISO had not received notice of (a) patent(s) which may be required to implement this document. However, implementers are cautioned that this may not represent the latest information, which may be obtained from the patent database available at www.iso.org/patents. ISO shall not be held responsible for identifying any or all such patent rights.

Any trade name used in this document is information given for the convenience of users and does not constitute an endorsement.

For an explanation of the voluntary nature of standards, the meaning of ISO specific terms and expressions related to conformity assessment, as well as information about ISO's adherence to the World Trade Organization (WTO) principles in the Technical Barriers to Trade (TBT), see www.iso.org/iso/foreword.html.

This document was prepared by Technical Committee ISO/TC 71, *Concrete, reinforced concrete and pre-stressed concrete*, Subcommittee SC 6, *Non-traditional reinforcing materials for concrete structures*.

This third edition cancels and replaces the second edition (ISO 10406-2:2015), which has been technically revised.

The main changes are as follows:

- “Terms and definitions” has been revised to appropriately reflect the content of the main text.
- [Figure 3](#) has been revised to appropriately reflect the content of the main text.
- “Test report” has been revised.

A list of all parts in the ISO 10406 series can be found on the ISO website.

Any feedback or questions on this document should be directed to the user's national standards body. A complete listing of these bodies can be found at www.iso.org/members.html.
