Foreword	iv
Introduction	v
1 Scope	1
2 Normative references	1
3 Terms and definitions	1
4 Classification	3
4.1 Classification according to separation of solids and liquids from air flow	3
4.2 Classification according to air flow rate	3
5 Requirements	4
5.1 Characterization of central suction source equipment flow rate performance	4
5.2 Maximum suction pressure	4
5.3 Safety requirements	4
5.4 Electromagnetic compatibility (EMC)	4
5.5 Other requirements as applicable	4
5.5.1 Amalgam separator	4
5.5.2 Bacterial filter	5
6 Sampling	5
7 Measurement and test methods	5
7.1 General	5
7.1.1 General provisions for tests	5
7.1.2 Reference conditions (air flow rates)	5
7.1.3 Atmospheric conditions	5
7.1.4 Other conditions	5
7.2 Performance tests	6
7.2.1 Measurement of flow rate performance	6
7.2.2 Measurement of maximum suction pressure	6
7.2.3 Measures to prevent excessive static suction at the facility suction pipeline connection point	6
7.3 Bacterial filters	6
7.4 Visual inspection	6
7.4.1 Visual inspection equipment	6
7.4.2 Visual inspection of documentation	6
8 Information supplied by the manufacturer	7
8.1 General	7
8.2 Instructions for use	7
8.3 Technical description	7
9 Marking	8
9.1 Marking on outside of electrically operated central suction source equipment	8
9.2 Exhaust pipeline connection point	8
10 Packaging	8
Annex A (informative) Types of suction systems	10
Annex B (informative) Dry-suction system source equipment diagram	12
Annex C (informative) Semi-dry-suction system source equipment diagram	13
Annex D (informative) Wet suction system source equipment diagram	15
Bibliography	17

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

The procedures used to develop this document and those intended for its further maintenance are described in the ISO/IEC Directives, Part 1. In particular the different approval criteria needed for the different types of ISO documents should be noted. This document was drafted in accordance with the editorial rules of the ISO/IEC Directives, Part 2 (see www.iso.org/directives).

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO shall not be held responsible for identifying any or all such patent rights. Details of any patent rights identified during the development of the document will be in the Introduction and/or on the ISO list of patent declarations received (see www.iso.org/patents).

Any trade name used in this document is information given for the convenience of users and does not constitute an endorsement.

For an explanation on the voluntary nature of standards, the meaning of ISO specific terms and expressions related to conformity assessment, as well as information about ISO's adherence to the World Trade Organization (WTO) principles in the Technical Barriers to Trade (TBT) see the following URL: www.iso.org/iso/foreword.html.

This document was prepared by Technical Committee ISO/TC 106, *Dentistry*, Subcommittee SC 6, *Dental equipment*.

This second edition cancels and replaces the first edition (ISO 10637:1999), which has been technically revised.

The main changes compared to the previous edition are as follows:

- clarification of the scope;
- addition of the classification according to the air flow rate (Type 1, Type 2 or Type 3);
- addition of measurement and test methods;
- addition of diagrams for different suction source equipment in the Annexes.
