Foreword	iv
Introduction	v
1 Scope	1
2 Normative references	1
3 Terms and Definitions	1
4 Safety	3
5 Preparation of the test sections	4
5.1 General conditions	4
5.2 Pressure pipelines	4
5.2.1 General	4
5.2.2 Anchoring and closures	4
5.2.3 Partial backfilling before testing	6
5.2.4 Filling with water and air venting	6
5.3 Non-pressure pipelines	9
6 Pressure testing procedure	9
6.1 General	9
6.2 Preliminary operations for pressure pipelines	10
6.3 Preliminary test for pressure pipelines	11
6.4 Main pressure test	12
6.4.1 General	12
6.4.2 Water loss test	12
6.4.3 Pressure drop test — Direct reading (PDDR)	13
6.5 Determination of acceptance	13
6.6 Testing of the complete pipeline	13
6.7 Non-pressure pipelines	13
7 Acceptance criteria	14
7.1 Pressure pipelines	14
7.1.1 Water loss test — Falling pressure and water loss test — Constant pressure	14
7.1.2 Pressure drop test — Direct reading	14
7.2 Non-pressure pipelines	14
Annex A (informative) Test methods description and comparison	15
Annex B (informative) Example of hydrostatic testing report	17
Annex C (informative) Pressure pairing of component pressures and pipeline pressures	19
Bibliography	20

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

The procedures used to develop this document and those intended for its further maintenance are described in the ISO/IEC Directives, Part 1. In particular, the different approval criteria needed for the different types of ISO documents should be noted. This document was drafted in accordance with the editorial rules of the ISO/IEC Directives, Part 2 (see www.iso.org/directives).

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO shall not be held responsible for identifying any or all such patent rights. Details of any patent rights identified during the development of the document will be in the Introduction and/or on the ISO list of patent declarations received (see www.iso.org/patents).

Any trade name used in this document is information given for the convenience of users and does not constitute an endorsement.

For an explanation of the voluntary nature of standards, the meaning of ISO specific terms and expressions related to conformity assessment, as well as information about ISO's adherence to the World Trade Organization (WTO) principles in the Technical Barriers to Trade (TBT), see www.iso.org/iso/foreword.html.

This document was prepared by Technical Committee ISO/TC 5, *Ferrous metal pipes and metallic fittings*, Subcommittee SC 2, *Cast iron pipes, fittings and their joints*.

This second edition cancels and replaces the first edition (ISO 10802:1992), which has been technically revised.

The main changes compared to the previous edition are as follows:

- add the safety instructions for hydrostatic testing operation;
- add hydrostatic test flow chart;
- add several diagrams for comprehensiveness;
- add pressure drop test method, as alternative of constant pressure test.

Any feedback or questions on this document should be directed to the user's national standards body. A complete listing of these bodies can be found at www.iso.org/members.html.
