

International Standard

ISO 11357-6

Plastics — Differential scanning calorimetry (DSC) —

Part 6:

Determination of oxidation induction time (isothermal OIT) and oxidation induction temperature (dynamic OIT)

Plastiques — Analyse calorimétrique différentielle (DSC) —

*Partie 6: Détermination du temps d'induction à l'oxydation (OIT
isotherme) et de la température d'induction à l'oxydation (OIT
dynamique)*

**Fourth edition

Foreword	iv
Introduction	v
1 Scope	1
2 Normative references	1
3 Terms and definitions	1
4 Principle	2
4.1 General	2
4.2 Oxidation induction time (isothermal OIT)	2
4.3 Oxidation induction temperature (dynamic OIT)	2
5 Apparatus and materials	2
5.1 General	2
5.2 DSC instrument	3
5.3 Crucibles	3
5.4 Flowmeter	3
5.5 Oxygen	3
5.6 Air	3
5.7 Nitrogen	3
5.8 Gas-selector switch and regulators	3
6 Test specimens	4
6.1 General	4
6.2 Specimens from compression-moulded plates	4
6.3 Specimens from injection-moulded plates or melt flow extrudates	4
6.4 Specimens from finished parts	4
7 Test conditions and specimen conditioning	5
8 Calibration	5
8.1 Oxidation induction time (isothermal OIT)	5
8.1.1 General	5
8.1.2 Dynamic temperature calibration	5
8.1.3 Isothermal stepwise temperature calibration	5
8.2 Oxidation induction temperature (dynamic OIT)	5
9 Procedure	6
9.1 Setting up the instrument	6
9.2 Loading the test specimen into the crucible	6
9.3 Insertion of crucibles	6
9.4 Nitrogen, air and oxygen flow	6
9.5 Sensitivity adjustment	6
9.6 Performance of measurement	6
9.6.1 Oxidation induction time (isothermal OIT)	6
9.6.2 Oxidation induction temperature (dynamic OIT)	7
9.7 Cleaning	8
10 Expression of results	8
11 Precision and bias	10
12 Test report	10
Bibliography	12

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

The procedures used to develop this document and those intended for its further maintenance are described in the ISO/IEC Directives, Part 1. In particular, the different approval criteria needed for the different types of ISO documents should be noted. This document was drafted in accordance with the editorial rules of the ISO/IEC Directives, Part 2 (see www.iso.org/directives).

ISO draws attention to the possibility that the implementation of this document may involve the use of (a) patent(s). ISO takes no position concerning the evidence, validity or applicability of any claimed patent rights in respect thereof. As of the date of publication of this document, ISO had not received notice of (a) patent(s) which may be required to implement this document. However, implementers are cautioned that this may not represent the latest information, which may be obtained from the patent database available at www.iso.org/patents. ISO shall not be held responsible for identifying any or all such patent rights.

Any trade name used in this document is information given for the convenience of users and does not constitute an endorsement.

For an explanation of the voluntary nature of standards, the meaning of ISO specific terms and expressions related to conformity assessment, as well as information about ISO's adherence to the World Trade Organization (WTO) principles in the Technical Barriers to Trade (TBT), see www.iso.org/iso/foreword.html.

This document was prepared by Technical Committee ISO/TC 61, *Plastics*, Subcommittee SC 5, *Physical-chemical properties*, in collaboration with the European Committee for Standardization (CEN) Technical Committee CEN/TC 249, *Plastics*, in accordance with the Agreement on technical cooperation between ISO and CEN (Vienna Agreement).

This fourth edition cancels and replaces the third edition (ISO 11357-6:2018), which has been technically revised.

The main changes are as follows:

- the isothermal stepwise temperature calibration has been added for isothermal OIT.

A list of all parts in the ISO 11357 series can be found on the ISO website.

Any feedback or questions on this document should be directed to the user's national standards body. A complete listing of these bodies can be found at www.iso.org/members.html.
