Foreword	iv
1 Scope	1
2 Normative references	1
3 Terms and definitions	1
4 Establishing a sampling scheme	2
4.1 General	2
4.2 Design of the sampling scheme	2
4.2.1 Material to be sampled	2
4.2.2 Division of lots	2
4.2.3 Precision of sampling	2
4.2.4 Bias of sampling	3
4.3 Precision of results	3
4.3.1 Precision and total variance	3
4.3.2 Primary increment variance	4
4.3.3 Preparation and testing variance	4
4.3.4 Number of sub-lots and number of increments per sub-lot	4
4.4 Minimum mass of sample	6
4.5 Mass of primary increment	8
4.6 Size analysis	8
5 Methods of sampling from wagons, barges and ships	9
5.1 General	9
5.2 Number of increments and sub-lots	9
5.2.1 General analysis and moisture samples	9
5.2.2 Common sample	9
5.3 Taking the increments	9
5.4 Distribution of increments	10
5.4.1 Wagons	10
5.4.2 Barges	10
5.4.3 Ships	10
5.4.4 Random selection of increments	10
6 Methods of sampling from stockpiles	11
7 Sampling equipment — mechanical auger	11
8 Handling and storage of samples	13
9 Sample preparation	14
10 Minimization of bias	14
10.1 Causes of bias	14
10.2 Checking for precision and bias	14
11 Verification	15
Bibliography	16

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

The procedures used to develop this document and those intended for its further maintenance are described in the ISO/IEC Directives, Part 1. In particular, the different approval criteria needed for the different types of ISO document should be noted. This document was drafted in accordance with the editorial rules of the ISO/IEC Directives, Part 2 (see www.iso.org/directives).

ISO draws attention to the possibility that the implementation of this document may involve the use of (a) patent(s). ISO takes no position concerning the evidence, validity or applicability of any claimed patent rights in respect thereof. As of the date of publication of this document, ISO had not received notice of (a) patent(s) which may be required to implement this document. However, implementers are cautioned that this may not represent the latest information, which may be obtained from the patent database available at www.iso.org/patents. ISO shall not be held responsible for identifying any or all such patent rights.

Any trade name used in this document is information given for the convenience of users and does not constitute an endorsement.

For an explanation of the voluntary nature of standards, the meaning of ISO specific terms and expressions related to conformity assessment, as well as information about ISO's adherence to the World Trade Organization (WTO) principles in the Technical Barriers to Trade (TBT), see www.iso.org/iso/foreword.html.

This document was prepared by Technical Committee ISO/TC 27, *Coal and coke*, Subcommittee SC 4, *Sampling*.

This third edition cancels and replaces the second edition (ISO 13909-3:2016), which has been technically revised.

The main changes are as follows:

- the title was updated to align with the ISO 13909 series;
- the scope was updated;
- several aspects of the sampling were updated to state of the art.

A list of all parts in the ISO 13909 series can be found on the ISO website.

Any feedback or questions on this document should be directed to the user's national standards body. A complete listing of these bodies can be found at www.iso.org/members.html.
