Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

International Standards are drafted in accordance with the rules given in the ISO/IEC Directives, Part 3.

Draft International Standards adopted by the technical committees are circulated to the member bodies for voting. Publication as an International Standard requires approval by at least 75 % of the member bodies casting a vote.

Attention is drawn to the possibility that some of the elements of this International Standard may be the subject of patent rights. ISO shall not be held responsible for identifying any or all such patent rights.

International Standard ISO 14535 was prepared by Technical Committee ISO/TC 42, *Photography*.

Introduction

Room-light operation has become increasingly attractive to users of electronic-scanner output equipment and image-setting devices. This equipment requires accurate cassettes and a good sensitized material/equipment interface, especially where accurate registration is an important feature, e.g. in colour work.

This International Standard is required in order to define the room-light loading packages which must interface with the above equipment.
