Foreword	iv
1 Scope	1
2 Normative references	1
3 Terms and definitions	1
4 Classification	2
4.1 Type (hose construction).....	2
4.2 Hose ends.....	2
5 Dimensions, tolerances and maximum mass	2
5.1 Inside diameter and maximum mass.....	2
5.2 Length and tolerance on length.....	3
6 Performance requirements of finished hose or hose assembly	3
6.1 Visual examination.....	3
6.2 Hydrostatic requirements.....	3
6.2.1 Deformation under proof pressure.....	3
6.2.2 Burst pressure.....	4
6.3 Adhesion (type A hoses only).....	4
6.4 Low temperature flexibility.....	4
6.5 Ozone resistance (type A hoses only).....	4
6.6 Bending resistance at ambient temperature.....	4
6.7 UV resistance (type B hoses only).....	4
6.8 Loss in mass on heating (type B hoses only).....	4
6.9 Vacuum resistance.....	4
6.10 Pressure impulse resistance (type B hoses only).....	5
6.11 Reinforcement fracture resistance (type B hoses only).....	5
6.12 Flexibility at ambient temperature.....	5
6.13 Vacuum resistance with flexing.....	5
7 Frequency of testing	5
8 Marking	6
8.1 Hose marking.....	6
8.2 Hose assembly marking.....	6
Annex A (normative) Test frequency for type tests and routine tests	7
Annex B (informative) Production acceptance tests	8
Annex C (normative) Pressure impulse test	9
Annex D (normative) Reinforcement fracture resistance test (type B hoses only)	12
Annex E (normative) Test for flexibility at ambient temperature	14
Annex F (normative) Test for vacuum resistance with flexing	16
Annex G (normative) Proof pressure test for hose assemblies	17
Bibliography	18

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

The procedures used to develop this document and those intended for its further maintenance are described in the ISO/IEC Directives, Part 1. In particular, the different approval criteria needed for the different types of ISO documents should be noted. This document was drafted in accordance with the editorial rules of the ISO/IEC Directives, Part 2 (see www.iso.org/directives).

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO shall not be held responsible for identifying any or all such patent rights. Details of any patent rights identified during the development of the document will be in the Introduction and/or on the ISO list of patent declarations received (see www.iso.org/patents).

Any trade name used in this document is information given for the convenience of users and does not constitute an endorsement.

For an explanation of the voluntary nature of standards, the meaning of ISO specific terms and expressions related to conformity assessment, as well as information about ISO's adherence to the World Trade Organization (WTO) principles in the Technical Barriers to Trade (TBT), see www.iso.org/iso/foreword.html.

This document was prepared by Technical Committee ISO/TC 45, *Rubber and rubber products*, Subcommittee SC 1, *Rubber and plastics hoses and hose assemblies*, in collaboration with the European Committee for Standardization (CEN) Technical Committee CEN/TC 192, *Fire and Rescue Service Equipment*, in accordance with the Agreement on technical cooperation between ISO and CEN (Vienna Agreement).

This second edition cancels and replaces the first edition (ISO 14557:2002), which has been technically revised. It also incorporates the Amendment ISO 14557:2002/Amd.1:2007.

The main changes compared to the previous edition are as follows:

- pressure units in bar were added throughout the document, as needed;
- [Clause 2](#) (Normative references) was updated;
- UV resistance requirement was added in [6.7](#);
- [Clause 7](#) on frequency of testing was added and all subsequent clauses were renumbered;
- [Annexes A](#) and [B](#) were added and all subsequent annexes were renumbered.

Any feedback or questions on this document should be directed to the user's national standards body. A complete listing of these bodies can be found at www.iso.org/members.html.
