6.1.1 <i>Serratia marcescens</i>	5
6.1.2 <i>Bacillus subtilis</i>	5
6.1.3 <i>Cladosporium sphaerospermum</i>	5
6.2 Preparation of microbial suspensions.....	6
6.2.1 Acquisition of pure culture of test microorganisms.....	6
6.2.2 Cultivation and dispersion of the test microorganism.....	6
6.2.3 Dilution of the microbial suspensions.....	6
7 Testing procedure for an in-duct UVGI device.....	6
7.1 Determination of airflow rate, temperature and humidity.....	6
7.2 Production of the airborne test microorganism.....	6
7.3 Measurement of the test microorganism concentration without and with UV irradiation..	7
7.3.1 Sampling procedure.....	7
7.3.2 Test microorganism sampling methods.....	7
7.3.3 Test microorganism culture and enumeration.....	7
7.4 Repeating the tests at other flow rates.....	7
7.5 Determination of the UV susceptibility of the test microorganism.....	7
8 Safety and environmental considerations.....	7
9 Calculation, evaluation and reporting.....	8
9.1 Determination of the inactivation rate of the test microorganism.....	8
9.2 Determination of the UV dose of the UVGI device.....	8
9.3 Evaluation of the UVGI capacity.....	8
9.4 Results reporting.....	8
Annex A (informative) Recipe of culture medium for the test microorganism.....	9
Annex B (informative) Method for determining the UV dose-response curve and susceptibility constant of a test microorganism in air.....	10
Annex C (informative) Susceptibility constants of some typical microorganisms in air by the literature.....	13
Bibliography.....	16

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

The procedures used to develop this document and those intended for its further maintenance are described in the ISO/IEC Directives, Part 1. In particular the different approval criteria needed for the different types of ISO documents should be noted. This document was drafted in accordance with the editorial rules of the ISO/IEC Directives, Part 2 (see www.iso.org/directives).

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO shall not be held responsible for identifying any or all such patent rights. Details of any patent rights identified during the development of the document will be in the Introduction and/or on the ISO list of patent declarations received (see www.iso.org/patents).

Any trade name used in this document is information given for the convenience of users and does not constitute an endorsement.

For an explanation of the voluntary nature of standards, the meaning of ISO specific terms and expressions related to conformity assessment, as well as information about ISO's adherence to the World Trade Organization (WTO) principles in the Technical Barriers to Trade (TBT), see www.iso.org/iso/foreword.html.

This document was prepared by Technical Committee ISO/TC 142, *Cleaning equipment for air and other gases*.

Any feedback or questions on this document should be directed to the user's national standards body. A complete listing of these bodies can be found at www.iso.org/members.html.
