Foreword	iv
1 Scope	1
2 Normative references	1
3 Terms and definitions	1
4 Requirements	2
4.1 Physical requirements.....	2
4.1.1 Manufacturing process compatibility.....	3
4.1.2 Resistance to temperature, pressure and leakage.....	3
4.1.3 Resistance to dropping.....	3
4.1.4 Transparency.....	3
4.1.5 Water vapour permeability.....	3
4.1.6 Particulate contamination.....	3
4.1.7 Cover.....	3
4.1.8 Access port — Penetration ability of the insertion point.....	3
4.1.9 Access port — Adhesion strength of the infusion device and impermeability of the insertion point.....	3
4.1.10 Access port — Tightness of the injection point.....	4
4.1.11 Hanger.....	4
4.1.12 Identification.....	4
4.2 Chemical requirements.....	4
4.2.1 Requirements for the raw container or the sheeting.....	4
4.2.2 Requirements for the test fluid.....	4
4.3 Biological requirements.....	5
4.3.1 Impermeability for microorganisms.....	5
4.3.2 Migration.....	5
5 Application of tests	5
Annex A (normative) Physical tests	6
Annex B (normative) Chemical tests	9
Annex C (normative) Biological tests	12
Annex D (normative) Reference spike	14
Bibliography	16

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

The procedures used to develop this document and those intended for its further maintenance are described in the ISO/IEC Directives, Part 1. In particular, the different approval criteria needed for the different types of ISO documents should be noted. This document was drafted in accordance with the editorial rules of the ISO/IEC Directives, Part 2 (see www.iso.org/directives).

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO shall not be held responsible for identifying any or all such patent rights. Details of any patent rights identified during the development of the document will be in the Introduction and/or on the ISO list of patent declarations received (see www.iso.org/patents).

Any trade name used in this document is information given for the convenience of users and does not constitute an endorsement.

For an explanation of the voluntary nature of standards, the meaning of ISO specific terms and expressions related to conformity assessment, as well as information about ISO's adherence to the World Trade Organization (WTO) principles in the Technical Barriers to Trade (TBT) see www.iso.org/iso/foreword.html.

This document was prepared by Technical Committee ISO/TC 76, *Transfusion, infusion and injection, and blood processing equipment for medical and pharmaceutical use*.

This third edition cancels and replaces the second edition (ISO 15747:2010), which has been technically revised. The main changes compared to the previous edition are as follows:

- the text of the Introduction has been moved as NOTE to the end of the Scope;
- a metallic reference spike has been defined, in [Annex D](#), to harmonise measurement of insertion point functional properties, for orientation and comparison purpose between different containers;
- the test for tightness of the injection point after piercing with a cannula has been revised to better define acceptance criteria;
- the wording of the titles of requirements and related tests procedures has been harmonised for better clarity.

Any feedback or questions on this document should be directed to the user's national standards body. A complete listing of these bodies can be found at www.iso.org/members.html.
