Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

The procedures used to develop this document and those intended for its further maintenance are described in the ISO/IEC Directives, Part 1. In particular the different approval criteria needed for the different types of ISO documents should be noted. This document was drafted in accordance with the editorial rules of the ISO/IEC Directives, Part 2 (see www.iso.org/directives).

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO shall not be held responsible for identifying any or all such patent rights. Details of any patent rights identified during the development of the document will be in the Introduction and/or on the ISO list of patent declarations received (see www.iso.org/patents).

Any trade name used in this document is information given for the convenience of users and does not constitute an endorsement.

For an explanation on the meaning of ISO specific terms and expressions related to conformity assessment, as well as information about ISO's adherence to the World Trade Organization (WTO) principles in the Technical Barriers to Trade (TBT) see the following URL: www.iso.org/iso/foreword.html

The committee responsible for this document is Technical committee ISO/TC 10, *Technical product documentation*, Subcommittee SC 1, *Basic conventions*.

This second edition cancels and replaces the first edition (ISO 16016:2000), of which it constitutes a minor revision.

Introduction

The existence of document and product protection, as well as its extent, is primarily oriented towards fulfilling the requirements of industrial property rights and copyright law. In order to draw the attention of users to this legally provided protection, additional safeguards are recommended through the use of protection notices that forestall the improper use of documents and products.

Normally, full protection is afforded only by appropriate contractual agreements between the involved parties. The protection notices specified in this International Standard serve to warn and explain. They are designed to facilitate the furnishing of proof and offer additional safeguards to authors and holders of commercial protection rights.

If any national laws require additional or other requirements for national trade, for example the use of national language, those requirements are to be respected.
