
**Road vehicles — Connection interface
for pyrotechnic devices, two-way and
three-way connections —**

**Part 2:
Test methods and general
performance requirements**

*Véhicules routiers — Interface de raccordement pour dispositifs
pyrotechniques, deux voies et trois voies —*

Partie 2: Méthodes d'essai et exigences des performances générales

Foreword	iv
Introduction	v
1 Scope	1
2 Normative references	1
3 Terms and definitions	1
4 Functional characteristics of mated connectors	2
4.1 General.....	2
4.2 Visual examination.....	2
4.3 Mating and unmating.....	2
4.4 Resistance to tensile and compressive force between the connector and squib holder equipped with initiator and retainer.....	3
4.4.1 Test.....	3
4.4.2 Requirements.....	4
4.5 Mechanical strength of the retainer in the squib holder.....	5
4.5.1 Test.....	5
4.5.2 Requirements.....	5
4.6 Combination of temperature/humidity/vibration.....	6
4.6.1 Test.....	6
4.6.2 Requirements.....	8
4.7 Coding.....	9
4.7.1 Test.....	9
4.7.2 Requirements.....	9
4.8 Polarisation.....	9
4.8.1 Test.....	9
4.8.2 Requirements.....	9
4.9 Contact resistance (voltage drop), millivolt test.....	9
4.9.1 Test.....	9
4.9.2 Requirements.....	11
4.10 Insulation resistance.....	11
4.11 Withstand voltage.....	11
4.12 Thermal ageing.....	11
4.13 Opening and closing of the short-circuit.....	11
4.14 Short-circuit resistance.....	12
4.14.1 Test.....	12
4.14.2 Requirements.....	13
4.15 Rapid change of temperature (thermal shock).....	13
4.16 Chemical fluids.....	13
5 Test sequences	13
Annex A (normative) Sealed variant of the pyrotechnic device/initiator harness connector assembly	15
Annex B (normative) Two-way (without ground) variant of the pyrotechnic device/initiator harness connector assembly	17
Annex C (normative) Variant without retainer of the pyrotechnic device/initiator harness connector assembly	19
Bibliography	20

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

The procedures used to develop this document and those intended for its further maintenance are described in the ISO/IEC Directives, Part 1. In particular, the different approval criteria needed for the different types of ISO documents should be noted. This document was drafted in accordance with the editorial rules of the ISO/IEC Directives, Part 2 (see www.iso.org/directives).

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO shall not be held responsible for identifying any or all such patent rights. Details of any patent rights identified during the development of the document will be in the Introduction and/or on the ISO list of patent declarations received (see www.iso.org/patents).

Any trade name used in this document is information given for the convenience of users and does not constitute an endorsement.

For an explanation of the voluntary nature of standards, the meaning of ISO specific terms and expressions related to conformity assessment, as well as information about ISO's adherence to the World Trade Organization (WTO) principles in the Technical Barriers to Trade (TBT) see www.iso.org/iso/foreword.html.

This document was prepared by Technical Committee ISO/TC 22, *Road vehicles*, Subcommittee SC 32, *Electrical and electronic components and general system aspects*.

This third edition cancels and replaces the second edition (ISO 19072-2:2013), which has been technically revised.

The main changes compared to the previous edition are as follows:

- [4.4.2.1 Table 1](#), force and torque requirements for straight connectors;
- [4.4.2.2 Table 2](#), force and torque requirements for right angle connectors;
- [4.9.1.2 Figure 8](#) including key, signal contact resistance;
- [4.9.2.1 Table 5](#), maximum signal contact resistance;
- [4.9.2.2 Table 6](#), maximum contact resistance between ground and squib holder.

A list of all parts in the ISO 19072 series can be found on the ISO website.

Any feedback or questions on this document should be directed to the user's national standards body. A complete listing of these bodies can be found at www.iso.org/members.html.
