Foreword	vi
Introduction	vii
1 Scope	1
2 Normative references	2
3 Terms and definitions	3
4 Safety requirements and measures for controls	9
4.1 Safety and reliability of control systems	9
4.2 Control devices	9
4.3 Start	9
4.3.1 Direct start	9
4.3.2 Start via control power-on	10
4.3.3 Integrated feed	10
4.4 Safe stops	10
4.4.1 General	10
4.4.2 Normal stop	10
4.4.3 Operational stop	11
4.4.4 Emergency stop	11
4.5 Braking function of tools	11
4.6 Mode selection	11
4.6.1 Units' Manual adjustments mode (MODE 2)	12
4.6.2 Fine adjustment mode (MODE 3)	12
4.6.3 Feed chains greasing mode (MODE 4)	13
4.7 Tool speed changing	14
4.7.1 Speed changing by shifting the belts on the pulleys	14
4.7.2 Speed changing by incremental speed change motor	14
4.7.3 Infinitely variable speed by frequency inverter	14
4.8 Failure of any power supply	14
4.9 Manual reset control	14
4.10 Standstill detection and monitoring	14
4.11 Machine moving parts speed monitoring	14
4.12 Time delay	14
4.13 Teleservice	14
5 Safety requirements and measures for protection against mechanical hazards	14
5.1 Stability	14
5.2 Risk of break-up during operation	15
5.3 Tool and tool fixing design	15
5.3.1 General	15
5.3.2 Spindle locking	15
5.3.3 Circular saw blade fixing device	15
5.3.4 Flange dimension for circular saw blades	15
5.3.5 Spindle rings	15
5.4 Braking	16
5.4.1 Braking of tools	16
5.4.2 Maximum run-down time	16
5.4.3 Brake release	16
5.5 Safeguards	16
5.5.1 Fixed guards	16
5.5.2 Interlocking moveable guards	16
5.5.3 Hold-to-run control	17
5.5.4 Two-hand control	17
5.5.5 Electro-sensitive protective equipment (ESPE)	17
5.5.6 Pressure-sensitive protective equipment (PSPE)	17

5.5.7	Enabling control	17
5.6	Prevention of access to hazardous moving parts	17
5.6.1	Guarding of tools installed inside the integral enclosure	17
5.6.2	Guarding of external milling units	17
5.6.3	Guarding of sanding belts	18
5.6.4	Guarding of the edge banding zone	18
5.6.5	Access between machine halves on double-end machines	18
5.6.6	Access to hazard points through the slot between chain beam and top pressure beam	19
5.6.7	Guarding of drives	20
5.6.8	Safeguarding of the feed mechanisms	20
5.6.9	Safeguarding of machine half movement on double-end machines	23
5.7	Impact hazard	26
5.8	Clamping devices	26
5.9	Measures against ejection	26
5.9.1	General	26
5.9.2	Guards materials and characteristics	27
5.9.3	Devices to minimize ejection of rigid edges	27
5.9.4	Height adjustments of feed mechanism	28
5.10	Workpiece supports and guides	28
5.10.1	General	28
5.10.2	Additional workpiece support at the outfeed	28
5.10.3	Transversal infeed device	29
5.10.4	Automatic panel returner	29
6	Safety requirements and measures for protection against other hazards	30
6.1	Fire	30
6.2	Noise	31
6.2.1	Noise reduction at the design stage	31
6.2.2	Noise emission measurement and declaration	31
6.3	Emission of chips and dust	31
6.4	Electricity	31
6.5	Ergonomics and handling	31
6.6	Lighting	31
6.7	Pneumatics	31
6.8	Hydraulics	31
6.9	Electromagnetic compatibility	31
6.10	Laser	32
6.11	Static electricity	32
6.12	Errors of fitting	32
6.13	Isolation	32
6.14	Maintenance	32
6.15	Relevant but not significant hazards	32
6.16	Extreme temperatures	32
6.17	Substances	33
6.18	Artificial optical radiation	33
7	Information for use	33
7.1	Warning devices	33
7.2	Marking	33
7.2.1	General	33
7.2.2	Additional markings	33
7.3	Instruction handbook	34
7.3.1	General	34
7.3.2	Additional information	34
	Annex A (informative) List of significant hazards	36
	Annex B (informative) Performance level required	38
	Annex C (normative) Stability test	40

Annex D (normative) Test for braking function	41
Annex E (normative) Impact test for guards	42
Annex F (normative) Noise test code	43
Bibliography	48

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

The procedures used to develop this document and those intended for its further maintenance are described in the ISO/IEC Directives, Part 1. In particular, the different approval criteria needed for the different types of ISO documents should be noted. This document was drafted in accordance with the editorial rules of the ISO/IEC Directives, Part 2 (see www.iso.org/directives).

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO shall not be held responsible for identifying any or all such patent rights. Details of any patent rights identified during the development of the document will be in the Introduction and/or on the ISO list of patent declarations received (see www.iso.org/patents).

Any trade name used in this document is information given for the convenience of users and does not constitute an endorsement.

For an explanation of the voluntary nature of standards, the meaning of ISO specific terms and expressions related to conformity assessment, as well as information about ISO's adherence to the World Trade Organization (WTO) principles in the Technical Barriers to Trade (TBT) see www.iso.org/iso/foreword.html.

This document was prepared by Technical Committee ISO/TC 39, *Machine tools*, Subcommittee SC 4, *Woodworking machines*, in collaboration with the European Committee for Standardization (CEN) Technical Committee CEN/TC 142, *Woodworking machines – Safety*, in accordance with the Agreement on technical cooperation between ISO and CEN (Vienna Agreement).

This first edition cancels and replaces ISO 18217:2015.

This document is intended to be used in conjunction with ISO 19085-1:2021, which gives requirements common to different machine types.

Any feedback or questions on this document should be directed to the user's national standards body. A complete listing of these bodies can be found at www.iso.org/members.html.

A list of all parts in the ISO 19085 series can be found on the ISO website.

Introduction

The ISO 19085 series provides technical safety requirements for the design and construction of woodworking machinery. It concerns designers, manufacturers, suppliers and importers of the machines specified in the Scope. It also includes a list of informative items to be provided to the user by the manufacturer.

This document is a type-C standard as stated in ISO 12100.

This document is of relevance, in particular, for the following stakeholder groups representing the market players with regard to machinery safety:

- machine manufacturers (small, medium and large enterprises);
- health and safety bodies (regulators, accident prevention organisations, market surveillance etc.)

Others can be affected by the level of machinery safety achieved with the means of the document by the above-mentioned stakeholder groups:

- machine users/employers (small, medium and large enterprises);
- machine users/employees (e.g. trade unions, organizations for people with special needs);
- service providers, e.g. for maintenance (small, medium and large enterprises);
- consumers (in case of machinery intended for use by consumers).

The above-mentioned stakeholder groups have been given the possibility to participate at the drafting process of this document.

The machinery concerned and the extent to which hazards, hazardous situations or hazardous events are covered are indicated in the Scope.

When requirements of this type-C standard are different from those which are stated in type-A or type-B standards, the requirements of this type-C standard take precedence over the requirements of the other standards for machines that have been designed and built according to the requirements of this type-C standard.

The full set of requirements for a particular type of woodworking machine are those given in the part of ISO 19085 applicable to that type, together with the relevant requirements from ISO 19085-1, to the extent specified in the Scope of the applicable part of the ISO 19085 series.

As far as possible, the safety requirements of parts of the ISO 19085 series refer to the relevant subclauses of ISO 19085-1. Each part contains replacements and additions to the common requirements given in ISO 19085-1.

[Clauses 1](#) to [3](#) are specific to each part and, therefore, replace ISO 19085-1:2021, Clauses 1 to 3.

For [Clauses 4](#) to [7](#) and the annexes, ISO 19085-1:2021, Clauses 4 to 7 and Annexes, each subclause can be:

- confirmed as a whole;
- confirmed with additions;
- excluded in total; or
- replaced with specific text.

This is indicated by one of the following possible statements:

- “ISO 19085-1:2021, [subclause/Annex], applies”;
