Foreword	iv
Introduction	v
1 Scope	1
2 Normative references	1
3 Terms and definitions	1
4 Transport theory calculational models	3
4.1 General	3
4.1.1 Output requirements	3
4.1.2 Methodology: transport calculations with fixed sources	3
4.2 Transport calculation	4
4.2.1 Input data	4
4.2.2 Discrete ordinates (SN) method	4
4.2.3 Monte Carlo transport method	4
4.2.4 Adjoint fluence calculations	5
4.3 Validation of neutron fluence calculational values	5
4.4 Determination of calculational uncertainties	5
5 Reactor pressure vessel neutron dosimetry measurements	6
5.1 Introduction	6
5.2 General requirements for reactor vessel neutron metrology	6
5.3 Stable-product neutron dosimeters	7
5.4 Dosimeter response parameters	7
5.5 Uncertainty estimates and measurement validation in standard neutron fields	7
6 Comparison of calculations with measurements	8
6.1 Introduction	8
6.2 Direct comparison of calculated activities with measured sensor activities	8
6.3 Comparison of calculated rates with measured average full-power reaction rates	8
6.4 Comparison of the calculations against measurements using least-squares methods	8
7 Determination of the best-estimate fluence	9
8 Calculational methods for dpa and gas production	9
8.1 Displacements per atom (dpa)	9
8.2 Gas production	9
Bibliography	11

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

The procedures used to develop this document and those intended for its further maintenance are described in the ISO/IEC Directives, Part 1. In particular the different approval criteria needed for the different types of ISO documents should be noted. This document was drafted in accordance with the editorial rules of the ISO/IEC Directives, Part 2 (see www.iso.org/directives).

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO shall not be held responsible for identifying any or all such patent rights. Details of any patent rights identified during the development of the document will be in the Introduction and/or on the ISO list of patent declarations received (see www.iso.org/patents).

Any trade name used in this document is information given for the convenience of users and does not constitute an endorsement.

For an explanation on the voluntary nature of standards, the meaning of ISO specific terms and expressions related to conformity assessment, as well as information about ISO's adherence to the World Trade Organization (WTO) principles in the Technical Barriers to Trade (TBT) see the following URL: www.iso.org/iso/foreword.html.

This document was prepared by Technical committee ISO/TC 85, *Nuclear energy, nuclear technologies, and radiological protection*, Subcommittee SC 6, *Reactor Technology*.

This document is based on the ANSI/ANS 19.10-2009 but extends to cover the evaluation of irradiation damage due to neutron fluence.
