Foreword	v
Introduction	vi
1 Scope	1
2 Normative references	1
3 Terms and definitions	1
4 Fundamentals	4
4.1 General	4
4.2 General principles of sustainability	5
4.3 Project information	5
4.4 Framework of generation and verification	5
4.5 Framework of documentation at approval	6
4.6 Harmonization of architectural and daylight opening design	6
5 Design elements of daylight openings	6
5.1 General	6
5.2 Matrix of aspects of daylight opening design	7
5.3 Daylight opening ratio to the wall area	8
5.4 Daylight opening ratio to the floor area	8
5.5 Levels of indoor daylight and the extent of sunlight	8
5.6 Quality of views to exterior	8
5.7 Daylight control systems in the building	9
6 Design process of daylight openings	9
6.1 General	9
6.2 Stage I — Formulation of project definition	9
6.2.1 Project definition	9
6.2.2 Output — Document I	10
6.2.3 Evaluation I	10
6.2.4 Output — Approval of document I	10
6.2.5 Iteration	10
6.3 Stage II – Schematic design	10
6.3.1 General	10
6.3.2 Input	10
6.3.3 Output	11
6.3.4 Evaluation II	11
6.3.5 Approval of document II	11
6.4 Stage III – Detailed design	11
6.4.1 General	11
6.4.2 Input	11
6.4.3 Output – Document IIIa	12
6.4.4 Analysis	12
6.4.5 Output – Document IIIb	12
6.4.6 Evaluation III	13
6.4.7 Approval of documents IIIa and IIIb	13
6.4.8 Iteration into detail design	13
6.5 Stage IV – Final design	13
6.5.1 General	13
6.5.2 Commissioning documents	14
6.5.3 Cost estimation	14
6.5.4 Output: the final documents	14
Annex A (normative) Flow diagram of the design process	16
Annex B (informative) Basic architectural forms of the daylight opening	17
Annex C (informative) Matrix of aspects of daylight opening design	19

Annex D (informative) Matrix of output required to satisfy daylight opening design	23
Bibliography	26

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

The procedures used to develop this document and those intended for its further maintenance are described in the ISO/IEC Directives, Part 1. In particular the different approval criteria needed for the different types of ISO documents should be noted. This document was drafted in accordance with the editorial rules of the ISO/IEC Directives, Part 2 (see www.iso.org/directives).

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO shall not be held responsible for identifying any or all such patent rights. Details of any patent rights identified during the development of the document will be in the Introduction and/or on the ISO list of patent declarations received (see www.iso.org/patents).

Any trade name used in this document is information given for the convenience of users and does not constitute an endorsement.

For an explanation of the voluntary nature of standards, the meaning of ISO specific terms and expressions related to conformity assessment, as well as information about ISO's adherence to the World Trade Organization (WTO) principles in the Technical Barriers to Trade (TBT) see www.iso.org/iso/foreword.html.

This document was prepared by Technical Committee ISO/TC 205, *Building environment design*.

Any feedback or questions on this document should be directed to the user's national standards body. A complete listing of these bodies can be found at www.iso.org/members.html.
