
**Fine ceramics (advanced ceramics,
advanced technical ceramics) —
Measurement of viscosity of
ceramic slurry by use of a rotational
viscometer**

*Céramiques techniques — Mesure de la viscosité des céramiques en
suspension au moyen d'un viscosimètre rotatif*

Foreword	iv
1 Scope	1
2 Normative references	1
3 Terms and definitions	1
4 Principle	3
4.1 Rotational viscometer with defined shear rate	3
4.2 Single cylinder viscometer	3
5 Apparatus	4
5.1 General	4
5.2 Rotational viscometer with defined shear rate	4
5.2.1 Measuring system	4
5.2.2 Basic capacity of the instrument	4
5.2.3 Installation of rotational viscometer	4
5.3 Single cylinder viscometer	5
5.3.1 Main body of single cylinder viscometer	5
5.3.2 Spindle	5
5.4 Temperature-control device	5
5.4.1 Thermostat	5
5.4.2 Thermometer	5
6 Calibration of the rotational viscometer	5
7 Measurement condition	6
7.1 Temperature	6
7.2 Selection of geometry and/or spindle (shear rate or angular velocity)	6
8 Pretreatment of the sample	6
8.1 General	6
8.2 Degassing	6
8.3 Mixing and dispersion by ultrasonication	6
9 Measurement procedure	7
9.1 Sampling	7
9.2 Measurement at fixed shear rate or angular velocity	7
9.3 Repeat	7
10 Expression of the results	7
11 Test report	7
Annex A (informative) Coaxial double cylinder system	9
Annex B (informative) Cone and plate system	12
Annex C (informative) Parallel plate system	13
Annex D (informative) Single cylinder viscometer	15
Bibliography	18

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

The procedures used to develop this document and those intended for its further maintenance are described in the ISO/IEC Directives, Part 1. In particular the different approval criteria needed for the different types of ISO documents should be noted. This document was drafted in accordance with the editorial rules of the ISO/IEC Directives, Part 2 (see www.iso.org/directives).

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO shall not be held responsible for identifying any or all such patent rights. Details of any patent rights identified during the development of the document will be in the Introduction and/or on the ISO list of patent declarations received (see www.iso.org/patents).

Any trade name used in this document is information given for the convenience of users and does not constitute an endorsement.

For an explanation on the voluntary nature of standards, the meaning of ISO specific terms and expressions related to conformity assessment, as well as information about ISO's adherence to the World Trade Organization (WTO) principles in the Technical Barriers to Trade (TBT) see the following URL: www.iso.org/iso/foreword.html.

This document was prepared by Technical Committee ISO/TC 206, *Fine ceramics*.
