Foreword	v
Introduction	vi
1 Scope	1
2 Normative references	1
3 Terms and definitions	2
4 Classification	5
5 Materials and construction	6
5.1 General	6
5.2 Lining	6
5.3 Reinforcement	6
5.4 Cover	7
5.5 Static electricity dissipation	7
5.5.1 General	7
5.5.2 External surface	7
5.5.3 Internal surface	7
6 Dimensions and tolerances	7
7 Performance requirements and testing	7
7.1 General	7
7.2 Leakage test	8
7.2.1 General	8
7.2.2 Type tests - Method A	8
7.2.3 Routine tests - Method B	9
7.3 Hydrostatic strength	10
7.3.1 Proof pressure test	10
7.3.2 Ultimate strength	10
7.4 Electrical conductivity	10
7.5 Tensile test of hose assembly	10
7.5.1 General	10
7.5.2 Test method	11
7.6 Vertical load strength	11
7.6.1 General	11
7.6.2 Test method	11
7.7 Torsion strength	12
7.7.1 General	12
7.7.2 Test method	12
7.8 Pressure cycle test (Hydraulic-pressure impulse test)	13
7.8.1 General	13
7.8.2 Apparatus	13
7.8.3 Test fluid	13
7.8.4 Test temperature	13
7.8.5 Test piece	13
7.8.6 Procedure	14
7.9 Hydrogen impulse test	15
7.10 Corrosion test	15
7.10.1 General	15
7.10.2 Test conditions	16
7.11 Minimum bend radius	16
7.12 Hose permeation	16
7.12.1 General	16
7.12.2 Test Method 1	16
7.12.3 Test Method 2	17
7.13 Ozone resistance	17

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

The procedures used to develop this document and those intended for its further maintenance are described in the ISO/IEC Directives, Part 1. In particular, the different approval criteria needed for the different types of ISO document should be noted. This document was drafted in accordance with the editorial rules of the ISO/IEC Directives, Part 2 (see www.iso.org/directives).

ISO draws attention to the possibility that the implementation of this document may involve the use of (a) patent(s). ISO takes no position concerning the evidence, validity or applicability of any claimed patent rights in respect thereof. As of the date of publication of this document, ISO had not received notice of (a) patent(s) which may be required to implement this document. However, implementers are cautioned that this may not represent the latest information, which may be obtained from the patent database available at www.iso.org/patents. ISO shall not be held responsible for identifying any or all such patent rights.

Any trade name used in this document is information given for the convenience of users and does not constitute an endorsement.

For an explanation of the voluntary nature of standards, the meaning of ISO specific terms and expressions related to conformity assessment, as well as information about ISO's adherence to the World Trade Organization (WTO) principles in the Technical Barriers to Trade (TBT), see www.iso.org/iso/foreword.html.

This document was prepared by ISO/TC 197, *Hydrogen technologies*.

This second edition cancels and replaces the first edition (ISO 19880-5:2019), which has been technically revised.

The main changes are as follows:

- [subclause 7.2.3](#) revised test gas and pass/fail criteria;
- [subclause 7.7.2](#) revised to add temperature tolerance;
- editorial changes.

A list of all parts in the ISO 19880 series can be found on the ISO website.

Any feedback or questions on this document should be directed to the user's national standards body. A complete listing of these bodies can be found at www.iso.org/members.html.
