Foreword	iv
Introduction	v
1 Scope	1
2 Normative references	1
3 Terms, definitions and symbols	1
3.1 Terms and definitions	1
3.2 Symbols	2
4 Principle	2
5 Measurements using a double-beam spectrophotometer	3
5.1 General	3
5.2 Double-beam spectrophotometer	4
5.2.1 General	4
5.2.2 Radiation source	4
5.2.3 Optical system	4
5.2.4 Integrating sphere	5
5.2.5 Detection system	5
5.3 Test environment	5
6 Specimen preparation	6
6.1 Specimen	6
6.2 Conditioning of specimen	6
7 Procedure	6
7.1 Performance certification of double-beam spectrophotometer	6
7.2 Measurement of baseline	6
7.3 Specimen mounting	7
7.4 Measurement of specimen transmittance	7
7.5 Measurement of remaining scattering	7
7.6 Measurement of scattering with specimen	7
7.7 Calculation of the forward scattering of the specimen	8
7.8 Calculation of the mean forward scattering of the specimen	9
7.9 Uncertainty budget	9
8 Test report	9
Annex A (informative) Measurement examples of the specimen transmittance, remaining scattering and scattering with a specimen	11
Annex B (normative) Performance certification of a double-beam spectrophotometer	13
Annex C (informative) Influence of minimum scattering collection angle to measured forward scattering	14
Annex D (informative) Derivation of the formula of forward scattering	17
Bibliography	20

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

The procedures used to develop this document and those intended for its further maintenance are described in the ISO/IEC Directives, Part 1. In particular, the different approval criteria needed for the different types of ISO documents should be noted. This document was drafted in accordance with the editorial rules of the ISO/IEC Directives, Part 2 (see www.iso.org/directives).

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO shall not be held responsible for identifying any or all such patent rights. Details of any patent rights identified during the development of the document will be in the Introduction and/or on the ISO list of patent declarations received (see www.iso.org/patents).

Any trade name used in this document is information given for the convenience of users and does not constitute an endorsement.

For an explanation of the voluntary nature of standards, the meaning of ISO specific terms and expressions related to conformity assessment, as well as information about ISO's adherence to the World Trade Organization (WTO) principles in the Technical Barriers to Trade (TBT) see www.iso.org/iso/foreword.html.

ISO 19962 was prepared by Technical Committee ISO/TC 172, *Optics and photonics*, Subcommittee SC 1, *Fundamental Standards*.

Any feedback or questions on this document should be directed to the user's national standards body. A complete listing of these bodies can be found at www.iso.org/members.html.
